Dave time card

Whether you're calculating your payroll or just double checking your proof of payment, this task requires math that you may not have used since elementary school. But don't worry about it, it's really very simple if you follow these easy steps. Convert hours into military time. For any in/out listing that occurs in p.m., add 12. For example, if you mark it at 4 p.m., list it as (4+12=)16. If the time card is already maintained in military time, do not make changes. Do not change the listings that occur in a.m. Convert minutes to decimals. Multiply the minute input by 1.667 and place that number in the minutes column for each entry. For example, if you check in at 10:15, the entry would be read (15 x 1.667=) 10.25. Subtract the outgoing list from the list for each day worked. If the previous examples were listed for Wednesday, Wednesday's time would total (16.0-10.25=) 5.75 hours. Repeat these steps for each worked shift. Add the individual lists to find out the total hours worked in the payment period. Tips Numerous free programs and websites can calculate this for you, from simple HTML forms to complex enterprise accounting software. Warnings If you are calculating payroll, be informed that the laws around employment and payroll are complex. You should talk to a professional if you haven't already.
