Originally published: 28 February 2020 Photo: shutterstock.com Although it is certainly not top notch, the design of toilet seats has seen an influx of innovation in recent years. So if you're planning to change your toilet seat, especially if it's been some time since you last seated at your local home improvement center, watch out for these key features:Silent closing: Gone are the days of banging toilet seats closed. Remove the product with hinges designed to gently let the seat down. Shaped bumpers: The simple, no-nonsense advantage of shaped bumpers in place? It shall not be interrupted during regular use. Colours: Toilet seats now come in dozens of colours. One manufacturer, Bemis, offers a color selection tool that helps homeowners navigate the field of available options. Cleaning: The better the seat, the easier it is removed for cleaning. Find a product that can only be removed with a screwdriver. Durability: Choose a toilet seat with stainless steel or galvanized hinged poles that neither pick up nor be co-roded as they hold the toilet seat in place. Versatility: For children, there are trainer models that have built-in removable potty seats; for seniors, some models of lavatory seats are equipped with side arms with non-slip handles. MATERIALS AND TOOLS Available on Amazon - Spare set of toilet seats – Penetrating oil - Adjustable keyToilet sofa spare set. Photo: JProveyDifferent toilet seats require slightly different installation methods. Read the manufacturer's instructions to understand the unpredictable and idiosyncrasy of the product you have chosen. It's one thing to Today's toilet seats are so easy to install that removing the old one is probably the hardest step If your existing toilet seat is added to the bowl using metal hardware, the humidity and humidity of the bathroom could corrode the hinges, making the nuts difficult to remove. If so, spray each nut with penetrating oil such as WD-40, then wait 10 minutes and try again. After successfully removing the old toilet seat, continue to install a new one. Few tools are required, since more often it is a simple matter of nuts and screws. Insert the screw through the appropriate holes in the toilet and bowl. Then, using an adjustable wrench, apply the torque to the nut placed under the bowl. The larger or more elongated matrix, the easier your work will be. Some toilet seat replacement kits may require the use of a tool specially designed for narrow spaces. Can these new toilet designs with easy installation prove their lifespan over time? We'll find out. Meanwhile, consider posting a sign on the toilet warning: No standing! Photo: istockphoto.com From the pressure of people sitting on the constant opening and closing of the lid and/or seat, your toilets are likely to get more traffic than any other seat in the house. So it is understandable that the seat could loosen up and twist a little from side to side. Problems are caused by screws that attach the seat to the chest of drawers, which is located just behind you where you are sitting. This is not just an inconvenience, but a potentially dangerous situation if the lid is separated from one of its screws while someone is using it, causing injury. Fortunately, repair must be an easy job for home people - whether you need to simply adjust the screws or replace them completely. Read on for two ways to go about how to tighten the toilet seat. Plan A: Tighten the screwdrivers and materials available on the Amazon – Flat screwdriver – Toilet seat hinge pads (optional) – Clamping screw wrench – Adjustable key (optional)STEP 1 Set up two screws that attach the seat to the commode. If there are small plastic cases covering the screws, open them with your fingers in the same way that you could access the shampoo cover; with this function, many modern toilet screw covers are produced. If not, use a flat screwdriver to gently pry them out and expose the screws. STEP 2 Assess the screwdriver for tightening the toilet seat screws, which are now uncovered, by screwing clockwise until they resist. Be sure to stop when each screw stops turning; You don't want to take them off completely or break them. Alternatively, consider adding a toilet seat curtain pad (less than \$1 apiece) to each screw. These pads have been designed for specific purposes of keeping the toilet seat in place. If you choose to do so, go to the next step. STEP 3 To install the seat hinge, unscrew the screws completely counterclockwise using a screwdriver. Before reins inserting insert the pads to the place where the screw meets the komodoro komodor screw them back in. STEP 4 If the screws are not tightened, try holding the nut on the bottom of the screw in place with a pair of pliers in one hand while turning the screw clockwise with a screwdriver in the other hand. Once again, you take care not to go too far and do not damage the screw or strip it; When it stops turning, you're done. Photo: istockphoto.comPlan B: Replace screws and materials available on Amazon - Miniature saw - Spare set of toilet seats - Spare nuts and screws with rubber pads (optional)STEP 1If the screws are frozen in place and simply do not move, cut them off with a miniature saw. Place the saw blade just below the screw head and slowly saw until they pass through the metal. STEP 2 After the screws are re-ed, the cut piece may be hot to the touch, so be careful when removing it. Repeat the process on the second screw, then clean all dirt on both sides. Remove each nut by turning it counterclockwise, then pull out the screws and discard them. STEP 3If you need to replace hinges as well as screws, it is best to buy a spare toilet seat kit for less than \$10 at your local hardware store. This includes nuts, screws and hinges with screws. Otherwise, you only need spare nuts and screws with rubber pads. Then, with old or new hinges, securely screw the screws in place one at a time by holding each nut on the base, falling into the centre of the nut and using a screwdriver to secure each screw clockwise. That should do a trick to tighten the toilet seat. Test the seat to make sure it doesn't sit from side to side, and you should sit nicely! Beautiful!
