Description This level is based on the game Five Nights at Freddy's, where we must be in this universe. The character himself is almost always behind the scenery, so we just have to see what happens. The gameplay begins with the opening credits on a black background and then begins to show footage depicting a scene in which robots sing in that daylight. Then there are the writings 12:00 AM and 5-th Night, after which we are shown pictures of some places, as well as some characters and the main elements of the game devoted to this level. The name of the above game is then displayed, which is interrupted by the display of game elements, such as defense against enemy characters, closing doors, viewing locations through the appearance of surveillance cameras and various hallucinations. Then the engraving 04:00 AM appears, after which the player is shown the most important events of the game plot: children's holiday at the pizzeria, luring the children into the basement and their subsequent murder. Then again, you start showing elements of the game and clocks on the wall, which is a clue to the main goal of the game - to survive until 6 a.m. At some point, the lighting starts flashing and then disappears, which in most cases means a loss to the player, since the loss of lighting makes the player completely vulnerable to animatronics. Here, however, the player is saved from a last-minute engraving at 06:00 AM, which means the game has been successfully flowed. Finishes the level with credit. The only coin on the coin is at 17%, inside the pointer. To get it, all you have to do is jump, be close to the same pointer.
