Analogies worksheet 1 answers

How are the words connected? Choose one of the relationships provided and write it down to the line. Determine the relationship between the first set of words. Then fill in the blank with a word that creates the same relationship between the second word pair. Choose a word on the right that best expresses a relationship similar to that of the original pair. To understand the analogy, you first need to figure out the relationship between the first few words. You do this by creating a sentence that covers the two words to each other. Choose the word that best completes each analogy. Determine the relationship between the first set of words. Then fill the empty set with a set of words that have the same relationship. Rewrite every analogy below so it makes sense. Indicate what kind of analogy it is. In any case, the analogy describes the relationship of a part with a whole. A student is part of a class and a player is part of a team. If you have ever played the game Tribond. This seems familiar to you. The main challenge to this is explaining the relationship in your own words. Take your time with this worksheet. A few will work, but which works best. The key is to find the second part. You need to fix all these sentences. Explain why they don't work, and then change words when necessary to make the analogy sound. Each question below presents a word relationship and a few words that is an example of that relationship. Although I really like all your worksheets, these analogies worksheets are a hit in my class. I just wanted to let you know :) Thank you, and keep it up! -- Tracey H., Winston-Salem, NC, 02/18/12 Like these materials? Show your support by liking us on Facebook... People often wonder about the effectiveness of analogies. What are they learning? How do they work? Why are they so useful? What makes analogies so effective is their ability to make students think critically. In order to answer an analogy question correctly, the student must form a logical relationship, or bridge between two words. They need to think about how the words are related. Since words represent particularities (not universals), there is an almost infinite number of ways in which they can be related. It is the student's job to limit this number and focus on the most essential relationship -- the most basic aspect of the function or definition of the word. This page contains analogies worksheets. In these worksheets, students should be able to recognize and recognize the relationship between the words in a word pair when two pairs of words represent parallel relationships. To answer an analogy question, you need to formulate the relationship between the words in the given word pair and then select the answer that contains words related to each other in almost the same way. Each question has five answer choices and 12 questions in total. There are his primary types of relationships used in our analogies: function, degree, lack, characteristic, type/type, part to the whole, and definition. Please note that these relationship categories are general; there are many other categories and variations used in these worksheets. Also remember that while learning how to solve analogy problems can be very instructive and rewarding, it can also be frustrating. That's why we strongly recommend that you check out our Classic Bridge Examples worksheet and our three-step method of solving analogy problems (see links below). This will greatly improve your personal understanding of how analogies work, improve your lesson plan when introducing analogies to students, and probably result in a higher rate of success. The best strategy to use when completing analogies problems is the bridge sense strategy. Bridge phrases are useful because they allow the student to recognize the answer pair directly by connecting it in the bridge sentence formulated from the question pair. If the bridge sentence works with both the question pair and answer pair, then you know you've found the right answer. © COPYRIGHT NOTICE: The publications below contain copyrighted work that can be used by teachers at school or at home. Binding, bookmaking, and or collation, reproduction and or duplication on other websites, creating online quizzes or tests, storing on drives or hard drives, publication on intranets such as Moodle and Blackboard, and whether the use of our worksheets for commercial gain is strictly prohibited. Check these worksheets before you get started. They provide useful information on how to approach analogy problems, and can be a great way to break the ice and avoid the frustration of getting stuck. If you like what you see, you can use these worksheets as classroom guides before you get started with our core content below. Classic Bridge Examples Three-step Method for solving analogies problems Below you will find our full list of printable worksheets in which the student must choose the phrase that makes sense. They are a good way to introduce beginners to common analogies bridges. Each worksheet has 10 questions and three answer choices. teachers at home or at school. Click a link to open a printable PDF version of the worksheet you want. We hope you find them useful. This unit contains classic worksheet analogies in which students must choose the pair of words that best express a relationship similar to that expressed in the original pair. Keep in mind that low initial analogies are created so that one word is static. This does not apply all other levels as both words are dynamic in them. Oh hey, and remember: the following are samples taken from our sister site, ReadTheory. This is a powerful educational tool de created to improve reading understanding for all and skill levels. On this website, students can take quizzes, earn achievements, track their progress and more. And better yet, we've implemented a login force where teachers can track student progress using powerful statistical analysis.
