Tor browser portable app

Tor Browser Portable Windows XP Windows Vista Windows 7 Windows 7 Windows 8 - English Tor Browser Portable is a browser that allows protected and secured web browsing. It comes with the features needed for this operation, data encryption included. Browsing: Tor Browser Portable's main function is, first of all, website browsing. The user can go to various activities on the web, such as checking emails or joining online communities. Anonymosity: This program is used to browse the Internet without being determined by a web server. To do this, it hides the Internet user's IP, and all the information related to it. Encryption: This one of the Options for Tor Browser Portable allows you to fully update data between two remote computers, such as e-mail messages or media files. It uses an encryption algorithm in case of interception. Available for free download. This portable version does not require a specific installation on the operating system. Nothing in particular. Пакет для анонимного интернет-серфинга путем and encrypt traffic across a distributed server network. Tor Browser Bundle does not allow the user to monitor the user's Internet connection and obtain information about which sites are visited, as well as information about the physical location of the visitor from all hosts visited. Includes Tor software and a well-configured Firefox browser. The package does not require installation and can be used with any media, including removable (flash drives, etc.). Tor'Firefox makes the Web work fast. It opens easily from the desktop, instantly downloads pages, and launches complex web applications without delay. Tor'Firefox browser has a simple and rational interface. You can delete your browser's experience at any time, including browsing and download history, cookies, saved passwords, and web forms. The level of Internet security is achieved through built-in phishing and malware protection. Thanks to the safe browsing technology introduced in Tor'Firefox, when you try to go to a website that may cause a phishing attack or contain malware, you get a warning message.
