[150] When he is angry, he becomes destructive; [150] And the raw power of his physical strength make up for his lower intelligence[149] and hates to wait. [150] Silver the Hedgehog Silver the Hedgehog [ai] is a silver-fur hedgehog 200 years since the future of the main timeline. He first appeared in 2006's Sonic the Hedgehog. His solo episode revolves around traveling back in time with Blaze the Cat to find and kill Sonic the Hedgehog, who is believed to be the cause of the world being destroyed in the future. or interact with their surroundings. [153] Like Sonic and Shadow, the week's Chaos Emerald power turned into a super form. Silver's creation was inspired by the early stages of development team created huge levels with multiple paths and decided they wanted to add a new character with unique abilities to play the levels in an alternative way. [152] The design team developed more than 50 different concepts for the characters. [152] At one point, it was supposed to be an orange mink named Venice (named after the city of the same name), but the developers ultimately decided against it, fearing that the mink would not mix with the other characters. [152] In the end, it was decided to produce another hedgehog instead. [152] Orange originally chose its fur coat, but soon moved away from that color, in favor of being a white-grays, which leads to Silver's color and name. [152] Silver's backstory was inspired by Trunks from the 1984 Dragon Ball manga, who made a similar journey to the past to kill two androids that wiped out most of humanity in its day; The screenplay is stated by Sonic the Hedgehog (2006): Essentially, I think Trunks has been in the spinoffs, multiplayer games and minor cameo roles of the Sonic series since his first appearance in Dragon Ball Z. [154] in 2006. He is one of the playable characters in Sonic Rivals and Sonic Rivals 2, a playable racer in Sonic Rivals 2, a playable racer in Sonic Riders: Zero Gravity,[155] Sonic Free Riders and Team Sonic Rivals and Sonic and the Black Knight, a playable racer in Sonic Rivals 2, a Sonic series starting with Mario & amp; Sonic at the Winter Olympics. It appears in Sonic Generations as the boss section of Crisis City (console version) and Tropical Resort (version 3DS). In addition, Silver was one of the few Sega characters to be able to make a cameo in Super Smash Bros. Brawl against the backdrop of the Sonic Green Hill Zone stage as well as as a trophy and sticker. [157] The character was generally not well received by critics. [158] Orbot and Cubot Orbot (aj) are dr. Eggman's data, he often makes sarcastic comments, pointing to the general flaws in Eggman's plans and, in return, a quick slap in the face. It reappeots in Sonic Colors, alongside a similar yellow robot, cubot (ak). [160] In contrast to Orbot, Cubot is rather slow, non-witty, and suffers from the error of sonic colors, which caused him to randomly speak with different accents. [161] The two continue to appear as assistants to Dr. Eggman in later titles such as Sonic Generations, Sonic Lost World and Sonic Forces. At the 2012 London Olympics, the duo made a cameo as a helping character for the London Party, copying stickers for the 2014 Winter Olympics in Sochi as host of the Action and Answer Tour and the animated series Sonic Boom. Digital Spy praised their inclusion in the plot of sonic colors, especially Cubot for his humorous comments and self-awareness of the game's tropes. [160] Wisps The initial set of Wisps, introduced by Sonic Colors Wisps, [160] is a species of extraterrestrial beings living on a grassy, lush planet called Wisp. [163] [164] The Wisps' mother is a much larger, pink one named Mother Wisp. [165] She created Planet Wisp and raised all her children. [166] Wisps speaks a common language that sonic and tails don't understand, [167] although tails builds a translation tool in Sonic Colors. [168] Japanese and English names derive from tails using a word in their own language; [169] The other characters in the game call them aliens. [170] Wisps consists of an energy force called Hyper-go-ons, [172] which can be used to enter the body of the playable protagonist Sonic and give it temporary elemental strength. [163] [173] They come in a number of varieties, each carrying one of the many elemental forces known as Color Powers. [163] When Sonic gathers prayer, he can use his power once; however, he can only carry one at a time. [174] There are many types of Wisps, each with its own unique ability. Colors introduced ten types between the Wii and Nintendo DS versions of the game; some appear in only one version. For example, Purple Wisps, whose Frenzy ability to sonic is difficult to control which can absorb obstacles, covers only carry one at a time. the Wii version, [175] but Violet Wisps, which increases its sonic density to a black hole-like level and prompts it to absorb enemies, obstacles, and rings, appears only in the DS version. [176] However, others appear in both versions, such as Yellow Wisps, which allows Sonic to drill underground and find otherwise inaccessible areas. [175] Lost World introduced several types of Wisps while retaining some old models. [177] These include Magenta Wisps, which bounces Sonic through the paths of musical notes, touching them on the Wii U touchscreen, [178] and Black Wisps, which turn Sonic into a bomb that can overturn the enemy and explode. [179] The Colors Manual describes each type of Wisp as having a different general personality; For example, Cyan Wisps, which allow Sonic to bounce off surfaces, are scatterbrained and energetic, while Orange Wisps, which blast him guickly into the air, fluctuating and explosive emotions. [180] In Sonic Colors, Eggman builds an amusement park on the planets of wisps under the pretext of catching up on past transgressions. [164] [181] [182] Suspicious, Sonic and Tails investigate and rescue two Wisps of Orbot and Cubot. [171] [183] [184] One of them, a chatty man named Yacker, is a man named Yacker, along with Sonic and Tails, during the game. [185] Eggman turned the Wisps into a damaged purple (Wii version) or purple (DS version) state to feed the brain control beam and control the universe. [186] [187] [188] Sonic frees Wisps from their own squads at all levels, [189] and uses several of the man to beat Eggman at the end of the game. [190] However, Eggman's brain control cannon fails and creates a black hole that sucks Sonic in until the Wisps combine his power to pull out and neutralize the black hole. [191] Yacker releases the remaining Wisps, restores them to their damaged form, thanks to Sonic and Tails, [192] and leaves. [193] In the DS version, Dal Wisp sappeared on Planet Wisp in Sonic Generations [196] and in the comics. [197] In an interview, lizuka stated that Wisps had been added to Colors to expand and strengthen the platform's action game, without forcing the player to switch to other playate to re-play at a level; Sonic Team did this by adding segments that require certain types of Wisps at levels prior to their first release. [199] lizuka said that she now believes that make these staples of the Sonic series. [200] Critics gave mixed reviews about Wisps and their integration into Sonic colors, outshining their polished physics and controls. [163] Dave McComb from film magazine He called them cute and strange,[201] while John Meyer of Wired found them cuddly and Dale North of Destructoid a cute little alien species. [202] Randy Nelson of Joystiq called them plush and believed they could easily lend their image to profitable goods. [204] Positive attention was focused on the diversity of Wisps available in the style of play of Sonic Colors and Lost World, as well as the style of games brought to the titles: for example, Gies stated that almost all of them add interesting oddity to Sonic's core abilities. [163] Game Informer's Tim Turi said that each one adds an interesting new game mechanics to the game. [176] Gies and Turi also praised the ability to recreate the old levels with Wisps. [163] Steve Thomason, president of Nintendo Power, identified them as a truly interesting addition to the Sonic formula amid a series of missteats and praised their cleverly designed variety. [175] Chris Scullion of Computer and Video Games described Wisps in Lost World as familiar power-ups that mimic the mechanics of Mario Wii's adventures as part of a larger, ambivalent point that the game is a derivative of Super Mario Galaxy. [205] However, the control and scheduling aspects of Wisps and each type were criticized: for example, Turi considered that almost all useful capabilities were completely fake and mourned wii controllers. [206] Justin Speer of GameTrailers thought the same way, adding that Wisps didn't really feel like it belonged here. [207] According to hardcore gamer magazine's lost world article, no wisps member uses the Wii U game controller satisfactorily. [208] Chris Shilling of Eurogamer found that they lead to clumsy touch screens or gyroscopic interludes that kill the pace of a level. [209] Sticks the Badger Sticks the Badger is an orange and brown badger, first shown in the animated television series Sonic Boom. Its characteristics are wild, energetic and paranoid, as it has lived alone in the wild for most of its life. However, he is portrayed as trying to strengthen his new friendship with Sonic, Amy, Tails and Knuckless. [210] Sticks plays a non-playable role in Sonic Boom: Rise of Lyric and Sonic Boom: Shattered Crystal. Scott Thompson of IGN called him infantile,[211] and Becky Cunningham of GamesRadar,[212] although destructoid is a nice addition to Chris Carter. [213] Sticks has also appeared in other Sonic Boom titles, including Sonic Dash 2: Sonic Boom and Sonic Boom: Fire & Carter. [213] Sticks has also appeared in other Sonic Boom titles, including Sonic Dash 2: Sonic Boom and Sonic Boom: Fire & Carter.
