Example ProblemPregnie expression 2x x=3.How to evaluate the expression Algebra calculatorFirst go to the Algebra Calculator home page. Type: First type the expression 2x. Then type the @symbol. Then type x =3. Try it now: 2x @ x = 3Clickable Demo Try to enter 2x @ x = 3 into the textbox. When you enter an expression, the Algebra calculator will evaluate 2x x =3:2(3) = 6. For more examples here are more examples of how to evaluate expressions in the Algebra calculator. Feel free to try them now. Need help? Please feel free to ask MathPapa if you are having problems. Related articlesAlgebra calculator tutorialBack algebra calculator » Sorry, your answer is incorrect. Time progress score end sorry, you have to use all your for this lesson. Practice in assessing basic algebraic expressions. This interactive math game will help students better understand the basic algebra. In this online math lesson, pupils practice practicing skills:* Evaluate algebraic expression. (For example, evaluate an expression: k = 6, 42/k)* Fill in the table to evaluate each algebraic expression. (For example, fill in an expression where z = 2, z = 4, z = 6, etc.) * Evaluate the algebraic expression of the word problem format. (For example, if v = 7, what is 49/v?) Students like to use iKnowit.com math lessons because it feels like they're playing a fun game. Learning becomes easy and entertaining. When a student gets the question right, the animated character on the screen is not a smart trick or even dances around! When a student answers a question incorrectly, he or she will display a detailed explanation of the perfectly easy-to-understand graphics that show how to get the correct answer next time. If students need to nudge a little in the right direction, they can choose a hint using the Hint icon. They will be given the key to help them figure out the math problem. The teacher or parent has the option to turn hint mode on or off. Once you sign up for iKnowit.com account, you will be able to use our useful administrative features. You can set up a class list and create an individual join for each of your students. Every time a student has math problems on iKnowit, you will be able to see the scores and problems they missed. When students join in to use the math program, they will have their child friendly page. At the top of the students page there is a Task assignments from teacher tab, as well as a recommendation for math topics to try. Students will not see the level of math assignments so that you can choose the appropriate level of each student's class without their knowledge if they work at different levels of the class. As a teacher, you can change what animations your students see. You can also decide whether to use the audio reading option. You can also decide how much advice a student should receive for each math lesson. We recommend you explore the hundreds of math lessons we have iKnowit.com. Whether you're looking for local value games, supplement and subtraction practices, or geometry lessons, we cover a variety of math topics. To see more math games in the fifth grade, visit our fifth grade math page. This tutorial is designated as E-level and is dedicated to fifth graders.5.OA.1Algebraic thinking and operation: Interpret and write Algebraic ExpressionsStudents must show the ability to use braces, brackets, and parentheses in numerical expressions. They should also be able to evaluate expressions that contain these characters. Length conversions (metric) (E-level)Conversion of measurements using a metric system, including conversions between millimeters, centimeters, meters, and kilometers. The lesson contains word problems and drag and drop question formats. Equivalent fractions (E by filling in the correct numerator or denominator number. Decide which fractions match the specified fraction. Select which number statement is correct. Question formats include several choices. Enter a new class code. Use only letters, numbers, or a dash. The code cannot start with a dash (-)This field is required and cannot be blank. Enter the class code. Use only letters, numbers, or a dash.
