Nokian offers a 60,000 mile treadwear guarantee with lightweight truck sizes. The tire promotes great all-weather traction. Special tire compound and tread design with 3D siping detail work together to enhance dry, wet and winter path gripping ability. Wide tread grooves disperse water and slush under the tire footprint. This further increases wet weather traction and effectively prevents hydroplaning. The durable tire compound retains flexibility in all weathers, which, combined with hydroplaning resistance, ensures the first pace of the year-round driving experience. The model offers all the landscape path with gripping ability as well. Larger split tread elements and wide grooves increase the traction power of soft, loose and uneven terrain surfaces and provide a safer drive. Tread elements are capable of maintaining a firm grip on all road and landscape surfaces, making the use of the model more versatile. Tread grooves also contain stone outlets that remove stones caught between tread elements. This prevents the retention of the stone, which can damage the tyre housing and structure. The tyre has driving safety characteristics and a stronger side wall compound. Driving safety indicators, or Short DSI numbers on the tyre mid-level, representing the percentage of tread wear on the tyres. They wear tread wear and show how much tread life remains in the tyre percentage. The lateral wall compound features aramid fiber, which prevents punctures and damage to the tire. It also increases the durability of the tyre by avoiding deformation under driving pressure and ensuring a safer driving experience. Rotiiva AT Plus is easy to control. The tread design is in the middle of the rib, which smoothes the tread with special stabilizers. They significantly increase steering capacity and driving stability. As a result, the steering system changes rapidly and accurately in its responsiveness to the driver's commands, while the tyre structure is fixed against the driving pressure affecting the tyre. The result is a safer performance in all weathers and on all terrain. Below is a list mōned populaarsed sõidukid, et 275/60R20 rehvid võivad sobida sõltuvalt aasta ja valik.
