Math Games & Activities from Around the World, Chicago Review Press, 1998.The University of Chicago. About Everyday Mathematics. when I turned it over and saw the word math, I lost interest immediately. Why would I want to play a mathematical game? I'm a writer. Where are my crosswords, my word searches, my anagrammer? Where are my letters? I threw the game that someone had sent to me on the kitchen table, figuring that I would find someone to give it to later. It's a wonder I can add at all. I don't hate math. I was pretty good at it at school, so much so that I actually scored higher on math than in the verbal part of the SAT's. But my husband, who has seen my face contort and sweat as I struggle to teach my fourth grader how to put thousands in fractions, says I shouldn't admit that. Hey, I wonder how many words in the English language begin and end with th such! I offered my 10-year-old last night when he asked me for help on his math homework. He sighed, and left to find his father for help instead. I'm a word girl. But later, when I looked for math games, scary titled Personal Trainer: Math, it was gone. Then I heard video game music that doesn't sound like Mario Kart (for once) coming from the other room. My son had loaded the maths trainer on handheld games console, and was already racing to his best score. I asked him to show me what he was doing. Okay, I already did the daily test, he explained, so I'll do this one. He clicked on something called the Kageyama Method, which immediately made my eyes glaze over. I'll do multiplication, he said, and I snapped out of it and tried to concentrate on what he was doing. Soon he was quickly writing answers to random multiplication problems and wracking up his score. When he was done, he asked: Would you try? Multiplication tables? Um, nope. But I figured I should try it so I could understand why my child liked this mathematical game. I grabbed the console and started writing answers to such problems as 9 x 7 and 8 x 8 as soon as possible. When I finished, the game told me I was in third place. I think I had a nightmare like this in elementary school. I let him hover and gave him back the game. He wandered off, walking and writing mathematical answers at the same time. I can hardly do it to sit down. And Apparently I'm not alone. A new study of 400 children between the ages of 9 and 14 found that many children believe that maths is the hardest subject in school. In fact, about 1 in 5 children believe they are more likely to grow up to be a famous athlete, actor or singer than to get A's and B's in math. Worse, many think they won't even need maths when they grow up. Ah, but they will, and not just when they are checking their children's math homework. Of the 400 parents surveyed, 86% said that maths is important to their careers, although more than half had once thought they would never use the math they had learned at school. I brought this up with my other son, the one who would rather choose music and art over multiplication tables. That's what calculators are for! he protested. I tried to explain why you need to understand the basics behind mathematical problems to even use a calculator in the first place. So I told him about the study and how 1 in 5 adults had also thought they would be more likely to end up being famous than using math as adults. But you're famous... kind of, he replied. And when do you use math? You're a writer. To add up my royalty control, I replied, and soon, he stopped arguing. My fourth grader is recharging his Nintendo DS so he can play more math games later. Me? I still prefer crosswords, but I think I'll try to save face by beating his Kageyama - or whatever - score tonight. You don't have to like math to want to be number one. You may find more information about this and similar at piano.io By Kate Halse and Anjannette ConnerLast Updated Jul 27, 2020 9:22:31 PM ET Photo Credit: Klaus Vedfelt/DigitalVision/Getty Images When it comes to playing games, math may not be the most exciting game theme for most people, but they shouldn't rule mathematics mathematics without giving them a chance. Whether you are studying for an upcoming exam or looking for cool maths games for your child, some websites really stand out for their fun and educational opportunities that are conveniently divided into specific age groups and topics. A number of sites specialize in producing games for a younger crowd, such as preschool through grade six, while others include fun games for kids, teens and even adults. Regardless of the target age, lots of popular

math games are available on the Internet for everyone to enjoy. Coolmath.com have a great selection of games for ages 13 to 100 (and beyond). For younger children, there is a separate Coolmath4Kids website. Both places teach math in a fun and informative way, but the place for older children and adults especially makes learning algebra and pre-calculus simpler by explaining concepts in an engaging and memorable way. Photo Credit: @TheRealCoolmath/Twitter Some of the site's most popular mathematical games include Moto 3XM, which relies on mathematical skills to get to the finish line, and Run 3, which involves skating, running and jumping through an exciting new galaxy to win the game. Other popular games include classics like chess and executioner with math focus. Aside from its catalogue of top 10 games, the website has a wide range of boredom-busting new games. In contrast, Mathplayground.com against a younger audience, with the bulk of available games designed for grades one to six. Games are conveniently divided into different categories, such as logic games, history of mathematics and math videos. While this website does not specifically list its most popular games, you can easily find fun games to play with some simple explore. Photo Courtesy: @mathplayground/Twitter If you click on Fun Skill Games at Math Playground, you can check out the game's spotlight and new games. Operation Boss, which requires you to put your math skills to the test to drive your car successfully around a track, is a remarkable former spotlight game. The better your skills, the longer your car will go. The same page includes new games as well as action games to keep your brain stimulated with new content. Mathgames.com also caters to a younger audience, with games aimed at pre-K through class eight. Students can practice many mathematical skills and knowledge on the site, including fractions, graphing and mixed equations, by playing games like Viking Queen Defense, Math vs Monsters, Number Worms and Cat Wars. (That's right. Move, Darth Vader!) Photo Credit: @mathgames/Twitter Math Games groups games together and puts a star next to his premium game. These games tend to be the most challenging (and sometimes the most fun), but they need to be unlocked by upgrading to premium service. Some of the site's most popular premium games include and Snacks, which allow users to help King King Grow into his throne, and Viking Queen Defense, which forces players to depend on mathematical skills to defend the kingdom from its enemies. You can also calculate how much you want to feed a variety of animals when playing Mathimals or defend your planet against extras by playing Math Invasion. Education.com provides free access to a large number of at-home resources to keep kids entertained and engaged while learning math. The site offers games for students from preschool through fifth grade and even breaks down opportunities into different categories for easier navigation. For example, you can choose tasks like mixed operations, fractions, money math, data, graphing, and more. Photo Credit: @Education_com/Twitter Some of the site's most popular games include Counting Pizza Party for preschoolers, Candy Shop Arrays for second-grade students who want to practice their multiplication skills, Subtraction Pizza Party for first graders and unlike Denominator Fractions for fifth graders. Breakfast anyone? Flipping Pancakes Fractions keeps third graders entertained and learning. From temporary online learning assistance to comprehensive home schooling tools, Homeschoolmath.net offers a comprehensive set of resources with a utteration to home-based education. The site has a wealth of resources including online math games sorted by subject along with free math spreadsheets, lessons, articles and even syllabus guides. Photo Courtesy: @turtlediarycom/Twitter Games are divided by age - elementary, middle school and high school - with choices for all levels. Each category has popular options, such as addictive Stardoku coloring for preschoolers and a list of all-time favorite challenging math puzzles. Special note: For games, Homeschoolmath.net a comprehensive list of fun games found on actual game sites, but do not provide games themselves. Even.
