After a few trips paid for your toddler seat, just assume your lap or play with fellow passengers to get family members 4 closer to members one, 2, and 3, you may also be assured that your trip to your mother-in-law is not worth it, after all. Fortunately, Airbus may have a way out. A recently published patent reveals a bench seat for an airplane that can be configured to sit between one and four people and while getting 2 parents and 2 children is one row of times that will definitely be a miracle, the real innovation that patent portends will be in pricing. When airlines can put different numbers of people in different rows, they can move from price-per-seat system to price-by-area pricing system - like air freight companies do. If your child is small enough to be just a quarter of a bench, you'll have to pay the equivalent of one seat for both of them. U.S. patent, of course, simply because the patent has been published does not mean that the air travel system will go immediately, configuring itself to accommodate this astonishing idea. Airlines may roll up the same time frame as they start handing out each peanut as a snack. In fact, it may have happened, in the meantime, you can hold on to booking that trip. Your mother-in-law longer [H/T] business inside the Airbus A320 is not a flying plane, More Frontier Airlines: Photo features Frontier Airlines, the U.S. Patent Office, when news of new patents for airline seat surfaces, news is often scary. Thinking of the creative and bizarre solutions we've seen for cramming ever more passengers on a plane, but this one from Airbus isn't induced. The latest patent application by the fancy aviation giant airline seats is not an individual tank seat we are accustomed to, but as a more flexible bench for people of different sizes. As the patent's pencil drawings show, the bench can accommodate two rather heavy fellows, three average-sized people, or a family of four with two children sitting inside a mother and father. The US Patent Office is only a patent, of course, and so like many of them, it is a rough idea that may never see the light of day. So we left wonders on booking and pricing will work for the bench rather than each seat. Airbus glory, though, for at least the least dystopian imagination of the less future of aviation. Airbus recently filed a separate patent for storage under the seats. In this scenario, you will keep your personal belongings under the seat in front of you. But under your own seat by lifting the seat. Sounds like the right idea at first until you consider that this design may reduce legroom even further and requires you to stand up if you need to get something out of your pocket. U.S. Patent Office Source: Consumerist This content is created and maintained by third parties and imported to this page to help users provide their email addresses. You may be able to find out more about this and similar content that piano.io seats for Airbus A330 usually have up to eight rows of flat-bed business seats in one, two- to one configuration, followed by 22 row economic seats in two, four, two arrangements. Seat schedules vary by airline and plane models, but all have two compartments. American Airways and Delta Air Lines fly Airbus A330 2 different models The Delta Airbus A330-200 seat table has four rows of Delta Comfort seats between eight-row Business Class and Economy Class seats. 21 In contrast, the US Airways A330-200 has five row business class seats and 30 row economic seats. The number and location of the bathroom also varies by seat. SeatGuru.com and SeatMaestro.com offer examples of different Airbus A330 seat charts, no matter how wide legroom traditional airplane seats make it almost impossible to feel comfortable. The aircraft seat is being rethought to provide passengers with greater mobility and comfort. That's the motivation behind Airbus's mattress-style seats for business class. The company says their new Settete chair is versatile enough to make passengers comfortable as they eat, sleep, work and relax in the air. The design allows the flyers to recline lounge-style or sleep just as they would on their home mattress. The idea is to collaborate between Airbus and seat manufacturer Geven and it is actually based on the three-seat economy configuration. The pair changed the standard three-seat setting to a single luxury-style mattress for the business class, which still has all the usual amenities: storage space, overhead lockers, wide entertainment screens and tray tables. At the end of the seat there is a seat belt to be used during takeoff, landing and a second seat belt for passengers in sleep mode. CNN reports that chairs are also 30 to 50 percent lighter than business class-style seats, according to their interview with Leader Amalia Martinez. Business Lines for The device is adjustable. Mockups for seats are the same length. But Martin said it has the potential to add a length to 195 centimetres, the A350 is an already comfortable aircraft, but Virgin Atlantic's new, warm design and loft launch really provides 'comfort' and brings 'hygges' to new heights. In a special ceremony at its British headquarters, Virgin Atlantic unveiled a reassuring new A350 passenger experience, greeting all passengers as they entered the plane as a new loft room - touted as the largest social space on Virgin Atlantic's ships. During the flight, there will be spots for upper to eight passengers to gather, chat, grab a drink or eat. Passengers can also pair them with Bluetooth headphones and watch custom entertainment on a 32-inch screen, or get a sky view from a live camera tail. The chairs in the loft have safety seat belts which will allow passengers to stay where they are, even during turbulence. High-end finishes, rich eggplants, clarets, warm golds, reds and tangerines provide an entire cabin, nose-to-tail, delicious ultramodern style that fits what we've come to expect from the brand. Virgin Atlantic finishes and design details are combined with custom mood lighting and large windows to add interest. - No two flights on this plane will feel quite the same. Our introduction of the A350 demonstrates the true evolution of the customer experience. We believe. Whether it's your first or 100th flight, and that's why we elevate our offer so that our customers have something totally unique. When they don't mix or relax at the loft, Virgin Atlantic Upper is a great place to relax. Class passengers can enjoy the new upstairs suite. Adding privacy without closing passengers in all seats is vast, with allowances for personal storage, light, personal mood, flight entertainment screens. The 18.5-inch and fully flat bed is more comfortable by armrests that can be pushed completely flat against the base and get out of your way while you sleep. Higher walls and privacy screens allow passengers to sleep unnoticed. Cocktail tables, shelves and large tray tables are combined to provide passengers with more work and dining rooms. Passengers can also enjoy entertainment on the 18.5- inch in-flight entertainment screen and use a Bluetooth headset to enjoy quality sound without using wires. There is also plenty of access to personal electronic devices with two USB sockets, and an AC socket which can fit U.K., U.S. and European plugs. Economy class and premium economy passengers will also enjoy high-design features such as design and breathable materials, comfortable seats and modern in-flight entertainment with 13.3-inch screens in premium and 11.6 in economy. Premium customers also get 7-inch leaning, more storage space for personal items, four-way adjustable backrests and leather-rich retail coverage. Economy class seats with new luxury breathable fabrics, including adjustable headrests, folding grid trays and USB power access, light and classic seats, 31-inch seats and 34-inch light-saving seats, we've seen the launch of a number of A350 aircrafts, more than our share of new interiors revealed and can be said that the new Virgin A350 Atlantic is one of the most impressive new cabin deals we've seen in years. In part, that's because airlines aren't shy about introducing new concepts. But this idea carries through on the design of all seats, and results in something truly relish. The kind of high hygg where you breakout orange and chocolate almonds paired with rich coffee or hot tea to put your feet, socks and rest in a relaxing candlelight. This design is beautifully matched with the low height of the A350, balanced humidity, noise reduction and other environmental controls that put less stress on the body. Large windows and mood lighting make the plane feel spacious and also help control. Virgin Atlantic has placed orders for 12 A350-1000 aircraft, valued at \$4.4 billion in entry prices, which will be delivered by 2021. Weather
