## Ecogear bluetooth speakers for the vx series

Source: Amazon Best Bluetooth Speakers Under \$50 Android Central 2020 Nothing makes some music a better party, and nothing makes music easier than a Bluetooth speaker, especially as more phone manufacturers admit a 3.5mm headphone jack. Luckily, you don't need to spend a fortune getting the best Bluetooth speaker for your needs, especially to get the party rolling with fantastic options like the Anker Soundcore Flare Mini. Source: Amazon Anker sure knows its way around smartphone accessories, and the same can be said for soundcore Flare Mini. This 360-degree speaker will be the night's talk with its unique design and bottom-mounted halo of LEDs. These LEDs will keep up with the party, such as pulse and glitter, with their rhythm, no matter what the music is playing. Included IPX7 rating also protects your Flare Mini from accidental jumps. Anker also made it possible to pair two Flare Minis to create stereo sound status. The downside here is that you will have to keep an eye on the battery, as the Flare Mini is rated for only 12 hours. Also, you can't use a headphone jack to connect your phone because there are no ports available. Connect two speakers for 360-degree audio LED's pulse stereo sound for music IPX7 Waterproof music 12 hours battery life Bluetooth 4.2 No auxiliary port perfect for parties, home, and elsewhere Flare Mini offers an attractive 360-degree design, along with rhythmic flashing LEDs and water resistance. Source: Sony Portability and budget is the names of the game, Sony SRS-XB01 is a fantastic choice. This speaker throws such an impressive punch that it's hard to believe the sound came from such a small package. The XB01's EXTRA BASS slogan, coupled with six hours of battery life, applies with punchy lows that allow you to listen to your favorite songs with plenty of bass for a long time. Sony also includes a strap that can be connected to the bottom of the speaker, if you want to throw it over your shoulder or attach it to a bag. The downside is that the SRS-XB01 does a ton of extra features. There's no custom app, so if you want to adjust EQ levels, you'll need to turn to the built-in audio tools of your smartphone or tablet. The micro-USB charging port also feels a bit dated these days, but these are the sacrifices you usually need to make to hit such a low price. Ultra portable IPX5 water resistance Add an extra speaker for six hours battery life Stereo audio Outdated Micro-USB charging port Application integration in a small package Big fist SRS-XB01 has a strange name, but you'll remember it the first time you hear it. Source: When it comes to listening to Anker Music or podcasts, you want to be able to hear them wherever you are. A speaker like Soundcore Motion Q comes here. With a 360-degree sound. The cylindrical design, along with two drives and 16 watts of power, make for an impressive package. As for battery life, we're looking at about 10 hours, which should be long enough for pool parties and so on. There is also a built-in microphone to access the audio assistant of your choice. Of course, you can wirelessly pair two Motion Q's for stereo 360-degree audio, and each speaker is feather-light at just 14.4 ounces. Built-in microphone Built-in microphone With dual full-range drivers with 360 degree audio 16W power IPX7 waterproof Stereo, it's important to hear your music just 10 hours battery life From anywhere you charge via Micro-USB and Soundcore Motion Q provides it with an all-encompassing cylindrical design. Source: Amazon This may not be a special speaker, but it is a popular choice. The latest generation Echo Dot still gives users a lot to talk about while guests are capable of showing off a bit when it comes. In addition to pairing via Bluetooth, you have the option to use the 3.5 mm auxiliary jack and even pair it with other devices over Wi-Fi. With Alexa built-in, you can easily control your smart home or get the answer to this question that nags your friend during a party. Sure, the sound isn't great, but it can pair this with another Echo Dot for stereo audio, or any other Bluetooth speaker. The other big drawback here is that the Echo Dot is not fully portable since you always need to keep it plugged in. This may be a bit frustrating, but given the lack of water resistance all this shouldn't be surprising. Amazon Alexa's built-in Pair stereo audio should be plugged in with another Echo Dot including a 3.5mm headphone jack that isn't always water resistant To impress your friends and check that smart home Echo Dot may not be the first speaker that comes to mind, but it should come close with its Alexa integration. Source: Android Central When you look at considering different Bluetooth speakers, many of them have the same old design: cylinders pump out music at varying speeds, shapes, and sizes. OontZ Angle 3 Ultra lets you cover as much space as possible with its unique triangle design. Oontz also includes an IPX6 rating for splash resistance, but we would not recommend taking angle 3 Ultra for a dip. However, the most important benefit for this speaker is the 30 meter range, which allows you to keep your phone with you, not with the speaker. While this 100-metre range is great, it will still be stuck in the past with the Micro-USB charging port. The OontZ Angle 3 Ultra's biggest advantage is the 100-foot range. Source: Anker There's nothing wrong with a Bluetooth speaker that doesn't have extra frills or a bunch of designs that makes it stand out from the crowd. Sometimes, a great Bluetooth speaker is just the run-of-the-mill option. This brings us to Anker Soundcore 2, which doesn't have any important features for wow. This speaker, however, offers 24 hours of battery life among the leaders on this list, along with IPX7 water resistance and Bluetooth 5.0. Take all this, when you combine with 12 watts of power, you'll work for every situation and have a real speaker. Since soundcore 2 is a fingerprint magnet, you may want to keep a cloth nearby after the party is over. Also, if the sound breaks down a bit, you probably don't want to play it at maximum volume. 12W audio 24 hours battery life Bluetooth 5.0 IPX7 waterproof Sound can be distorted when played loudly Fingerprint pulls This goes for a day Soundcore 2 is great for those who want long battery life and some water resistance. Just don't play at maximum volume. Collecting the best Bluetooth speakers can be difficult, but the Anker Soundcore Flare Mini comes close. This speaker offers good battery life, sound 360 degrees, and some great LEDs that flash along with music. You can also pair this with another Flare Mini for a perfect stereo sound setup for any party or situation. Don't expect to have all the latest features just equipped with a MicroUSB charging port and just Bluetooth 4.2. Nevertheless, Flare Mini will be capable of handling everything you throw at it, and then some. Learn more, Best Bluetooth Speakers Android Central 2020 Summer is the perfect time to buy Bluetooth speakers so you can pop your favorite music while swimming in the pool or camping with friends. Compatible with almost any device known to the man, Bluetooth speakers will be sure. As long as your phone, tablet or laptop is around, your music will be loud! Our favorite Ultimate Ears wonderboom 2 is due to its small form factor and water and dust resistance, but there are plenty of other options. Ultimate Ears speakers don't have to be expensive to be good. Wonderboom 2 gets shockingly loud for size and sounds perfect for almost any type of music, from pop rock to hip hop jazz. Like Megaboom 3, Wonderboom 2 has a versatile sound, making it great for parties. It

also comes in multiple flashy colors like megaboom 3 and can match with another speaker - albeit only with another Wonderboom 2 speaker. It's also IP67 certified, meaning it's dust and sink resistant — in fact, half of the photos you'll find online of Wonderboom 2 have speakers floating in pools. As a bonus, Wonderboom 2 is durable, rated to withstand drops of up to 1.5 metres, and lasts up to 13 hours between each charge. Not bad for a speaker this big. Size IP67 is fantastic sound for water and dust resistance Affordable Good battery life Micro-USB charger in a small package of large speaker feature Max No Party Up slightly deformed. Wonderboom 2 is water resistant, durable and super compact, with excellent sound and wide color options. There's not much to complain about with Soundcore 2. For a very small portion of the price of other Bluetooth speakers, Anker's latest, reputable sound and all-day battery life packs into a small, robust chassis. Soundcore 2 is waterproof and fully rated to last 24 hours - of course, I hope that all brands will be able to ensure good battery life in Anker. Unfortunately, Soundcore 2 is significantly missing bass, which can have a huge impact on certain genres of music, and is a bit quiet compared to other speakers on this list. Nevertheless, for the price of commands, there are a few color options available in a great small speaker, and you can even buy multiple and pair them together for surround sound sound. IPX7 water resistance Stereo pairing is not as loud as other speakers small and affordable with other Soundcores Fantastic battery life missing extremely affordable speaker bass. Soundcore 2 is a small speaker with water resistance and long battery life. It's a bit quiet and lacking in bass, but it's still a big deal. Tribit XSound Go is another cheap speaker with long battery life and IPX7 water resistance. It lacks bass and high-end sharpness, does not sound the most impressive, but it is certainly better than what any phone's speaker can put out. The XSound has 24 hours of battery life and an impressive assortment of up to 66 feet. There's a cord slot on the speaker to attach to any bag. Even to hang on a tree branch, and a rubber. headphone jack and Micro-USB charging port. If you have a limited budget, it's hard to make mistakes with XSound Go. All-day battery life IPX7 water and dust resistance You may want a skilled Bluetooth speaker as priced too high, missing the sound quality of the extremely affordable Lanyard slot for easy handling. Tribit XSound Go is affordable, water resistant and lasts all day without sweat. The XB12 is Sony's relatively new Bluetooth speaker with a soft touch rubber body that is both water resistant and beatable. It fits in the palm of your hand and becomes surprisingly loud and clean, even though it's small in size with reasonably balanced bass. Like other speakers on this list, the XB12 uses Micro-USB to charge and comes in a small assortment of eye-catching colors with matching wrist/carrying straps. It takes up to 16 hours per charge, but it takes several hours to reach full charge. With solid build quality and a solid exterior, there's a lot to love about the XB12 at a competitive price. Surprisingly loud, clear sound Long battery life Small, portable form factor IPX7 water and dust resistance Micro-USB, instead of USB-C charges gradually packing a powerful fist of small speaker. The XB12 fits in the palm of your hand and is water, dust and impact resistant and available in a few bold colours. If SoundLink Revolve+ is outside your price range, Micro is a smaller speaker for about half the price that is resistant to both water and impact. Available in a few interesting colors, it offers clean, distorted sound at a reputable volume — but its small size means it's a little short on bass. The main drawback of SoundLink Micro is battery life. Just 6 hours, this is far from the longest-lasting speaker we've seen, but your neighbors will likely appreciate the fixed limit on loud music. SoundLink Micro also features built-in microphones that let you search and even talk to Google Assistant or Siri when connected to your phone. Built-in microphone for audio assistants Small, portable design IPX7 water resistance Good sound quality Bad battery life calls and bass for audio assistance Missing built-in microphone. SoundLink Micro is ultra portable and has a microphone and Google Assistant for searches. When it comes to portable Bluetooth speakers, you should consider a few features of your product, such as battery life, sound quality, and element resistance. Portability means you'll want to take it to places that can be dangerous to electronics, so you'll want a speaker made to take action. There is no shortage of Bluetooth speakers to choose from, but if I had bought one, I'd go for Ultimate Ears Wonderboom 2. Although there are more specific options that prioritize things With longer battery life or better sound, Wonderboom 3 is the most versatile speaker, offering good, punchy sound, water resistance, good long battery life, and a small form factor.
