installed a new U-Verse TV and got the S30-S1B remote. I need to reset the factory settings, but nothing on the AT&T support site shows you how to do this for this version, the S30 version shown on the website does not match the key on our remote. We don't have ATT or other function buttons - they've been replaced with on-demand, interactive, and My Multiview buttons. Make sure your device is controlled. Turn on and you can hear live sounds before you start. Step 1: Press and hold the MENU and OK buttons at the same time for 3 seconds until the POWER button flashes red twice. Step 2: Enter the 5-digit code for your brand The POWER button flashes red twice. Step 3: Test the POWER and VOLUME buttons to see if they control your TV or audio device as expected. If this doesn't, repeat using the next code displayed for your manufacturer. Note: When entering the wrong code, the power button flashes one long red and the remote exits the programming mode without saving any changes. If your TV show is interrupted or inactive for more than 10 seconds, your glow button will turn off, and you'll need to restart the process. Try using every code under the manufacturer code list to find the right one for your device. If you turn off the backlight feature, you may not see the glow button flashing during the programming process. Step 1: Point the remote directly at the device you are trying to control. Press the MENU and OK buttons simultaneously for 3 seconds until the POWER button flashes red twice. Step 2: Press the On Demand button Blue for audio devices depends on what you're trying to control. Step 3: While pointing the remote at your device, press and hold the Fast Forward button and release the button as soon as the device responds. When the Fast Forward button is pressed, the remote POWER button flashes red every 3 seconds when the code is sent to allow the device to respond and let you release the key. Step 4: TV shows: Release the Fast Forward button As soon as the TV turns off, Press the POWER button to turn the TV back on. For audio devices, release the Fast Forward button. Press MUTE to turn on the device's sound. Use the volume keys to make sure the remote control is controlling the volume. If it doesn't work properly, repeat the process. Note: If the TV show is interrupted or inactive for more than 10 seconds, the POWER button flashes a long red and exits programming mode, which means the remote has returned to normal without recording the change. When programmed, the volume control is automatically set to control your TV unless the audio device is programmed into the remote control, which sets the volume button to control the audio device. This process shows you how to set the volume control to control the volume and mute the sound of the device you selected. Step 1: Press and hold the OK and MENU buttons simultaneously for 3 seconds until the POWER button flashes red twice. Step 2: Press the Volume Up button, the POWER button flashes red once and the remote backlight remains on. Step 3: Select the device you want to use for volume control Press the orange button on demand for Interactive button Blue for audio device or green My Multiview button for set-top box The POWER button flashes red twice if the volume control is set to TV or audio device, and 4 times if set to Set-Top-Box. Use the instructions below to change the order in which these devices are turned on or off. Step 1: Press and hold the OK and MENU buttons simultaneously for 3 seconds until the POWER button flashes red twice. Step 2: Press the POWER button, the POWER button flashes only once, and the remote backlight will remain on. Step 3: Set the order on or off for your device Press the On Demand button. Orange for TV, Interactive button Blue for audio device or green My Multiview button for set-top box Press each button in the order you want to turn it on and off when the POWER button is pressed. Step 4: Press the OK button to save the power control settings. The POWER button flashes red twice. Turn off the keypad backlight by default, your remote control is set with backlight. Here's how you can turn it on or off: Step 1: Press and hold the OK and MENU buttons simultaneously for 3 seconds until the POWER button flashes red twice. Step 2: Use the numeric keypad on the remote, type 9 7 2. If you repeat this process, the backlight will be activated again, and the POWER button will flash twice.
