Helöchen, Dear Leude As I said yesterday, I want to talk about the above topic. It has occurred to me as an unusual idea if I can find a quiet, uneasy and quiet system anywhere, where I can relax in building an athana and my worthwhile moon. In the first phase, I saw the Dolhan system which jumps very little per day and then even if a local force is constantly killed from there, so that they don't go into the wall with them. You also need a moon to mix, from which you can scan with the survey sample. Cerlestes.de the next page you can check directly that the minerals are worth the line. Then you need the following: a exportable ship m3 with 20k to launch an Athaan and Mondarallong module and enough fuel for it. I was the first choice on this system, which seemed to meet the top standards. Well... The system shot in strong Pocos de Calladas were a silent warning from me. So of course I installed my atanda completely unnecessary and started the next day the cycling of the drawing platform. Six days later it was time, the moon pulled in the evening was able to blow up the fragment, before I had stolen r64 from the belt in the same system with an exotic italian and. If no one comes, there's nothing anyone can do about it. So I just want to start with my moon, the local is also clean. Then suddenly the new owners of Pocos the Kaaldas, some small high second-wardikar allies, come and go out in my athanaanda. Mentally, I removed all the modules and fuel seconds i was first shot immediately, saving several million from unconscious destruction. I also have a war, but nothing was done in it, nor did they destroy the hunting athanaand, after which I could safely untanker. But I The theme didn't end with, because I found the same moon in another system. The system was almost completely dead, so I started the calling platform. I don't know if it's the same evening or the next day, at least I logged into the industry account by pure accident and checked my situation in the system, because actually a sabati stands on the oryclastand and shoot at it, I was mildly... I immediately calculated the time that he still needs to be strong and jump with Jita from his main character, fit the gnoghis vapal and down the system. In fact, deeper had forgotten to put new lenses in because it had even more time. I got him on the wrong foot. He also thought I had yet to come and I hoped he would be back later, but it should not be. In Itaanaand ,yuntankarad got it safely. Well, what you can say, both times were completely meaningless to the system and I think these guys were just bored. I mean, two man covers are not a threat. In any case, the entire project was not just worth it, because everyone is claimed by someone. Exano Fire free and clear for everything the mantra. The athane and the part is running. For some time now there has been the possibility of exploiting in low and in place 0.0 with an athana and moon. Running a capital part from The Atan and Moon, its investment in orbit and then running apart from the part. Finally, a Kushodrigra belt is produced, which provides various raw materials. Recently, you can do it on the moon in high seconds too. In the system with a security status of 0.5, you can now anchor such platforms in front of a moon and then work there peacefully. The advantage is obvious. On the one hand you can make minerals that you can't find in high seconds otherwise and secondly, the strudes are too large that you can be much more comfortable and comfortable with a large fleet like the Noob fleet, because not all noses are far from your nose for long periods. The part on the athaan and hook. Noob-Fleet received one with a gift as a fit from Seldon Westraat. However, it is still safely packed into the station. Last night we were guests of Dominican Blume1 and its corporation. They already have an italian and invited the Navo-Fleet to the minaret. Around 7 pm we started. For the first time, some pilots, including me, were allowed to see a bhader at Thanaandaandand and then make a Kushodrigra belt out of it. It was already impressive and the result was the Kushodrigra belt That we had to be able to taste that evening . It was very pleasant that you could circle around a dadspier Kushodarigra and get the whole cargo of Pansua. There is no comparison of the standard Kushodarigra belt which is immediately fissyly out after one or two cycles. Another benefit. You don't have to fly by belt, but you have comfortable in front of your nose. The mining incident continued from 7 pm to 10:30 pm. After that the belt was over and the Noob-fleet officially finished. That evening we had 1.500.000.000. We got 500.000.000 from Dominican Blume1, who paid a, and on 1.000.000.000.000 we met The Opatamamsis. A Noob-fleet pilot with a huge heart and a large wallet, it seems to me. This is not the first time he has donated billions to the New Ji fleet. On this occasion, thank you very much. At the end of the evening, each pilot can look forward to 78.000.000 on their wallet. We were at 50 pilot peak times. And without registering ads on this adventure. Respect! In all, the evening was a success. We had a lot of fun and a very good conversation.
