After we've tried Crane Zhiyun 2 we can only say one thing: amazing. Jion put the gold medal with that trimming. This stabilizer is designed for PRO and Mirrorless reflex cameras. Crane Zhiyun 2 precedes others and can withstand more weight than the competition and many other benefits. Without an extra day, we find out why it seems to us to be one of the best options for any video enthusiast. Comments. Features from Crane Zhiyun 2 here are the features that make this gimbal one of the best stabilizers and also compatible with the best camera brands. Follow Focus: This is the main feature of Crane 2. This includes a real-time tracking focus wheel. This is caused by the camera's wired connection. Also, Serous Follow Focus, Max is now included. 3.2 load charger: This means it can withstand cameras up to 3.2 each which includes all PRO reflex cameras. Zhiyun Optimal Operation recommends using cameras from 500gr. Increasing the possible load is due to Instune's algorithms that increase engine torque by 50%. Noise is reduced by 20%: not only do engines have more power, but they also reduce the noise they make. Impressive. With parallel control of 3 MCU (32-bit/u) Crane's response speed 2 is improved by 100%. This allows you to respond to the slightest vibration of the hand. It features an intuitive OLED display that shows us the connection status information, the remaining battery, and even the aperture, ISO, and shutter speed we use. Although it doesn't match all the cameras, there's no doubt it's CANON EOS compliant. It has speed control dialing to change camera settings with one hand. The standard MANFROTTO quick release panel allows you to quickly assemble and disassemble the reflex to change your lenses. Balance adjustment is very fast with both guides worn by the stabilizer. Just slowly slide the camera through the guides and in less than a minute you'll have it balanced. The accessory kit includes an aluminum alloy tripod that will allow you to plant the crane 2 for fantastic shots. His battery lasted up to 18 hours. He's way beyond his younger brother's 12 hours. With these 18 hours of battery life you can shoot at long high power and even charge your mobile if needed. The battery has 6000mA. Se can control crane stabilizer 2 from ZHIYUN M2 crane [official] handheld 3-axis Gimbal stabilizer smartphone application all in one of the daily photo opportunities coverage: use a compact camera, mirrorless camera, camera... 'design...' design'. Snap a unique pin and pin design to prevent the shaft from pitching. Remove,.....-6: Pan Tracking(PF), Full Trace(F), Lock(L), Full Range POV,... Crane Stabilizer 2 has several advanced tracking features. We explained them to you. Pan Tracking Mode (PF): This mode is used for precise scrolling scrolling. That's why the camera will only move horizontally and the other tosses will lock. Lock mode (L): This will make the camera always point in one direction. Even if we move the stabilizer, the camera points in the specified direction and does not track the movements. Manual mode: Allows you to control your camera with the built-in joystick or through the app. Reverse mode: Videos can be made with the in reverse of the trimble. This allows you to take the shots to get in and continue with the placed camera. Thus, the camera must be placed in the appropriate location. In case there's anything left for me to well ink, this video explains everything related to Crane Zhiyun 2 (I recommend you see it): Crane's conclusion and opinions 2 seem to be that we're not the only ones impressed with the Zhiyun Crane 2 model. On Amazon they give you great scores and great responses, click here to read them. Everyone says it goes great with their cameras, and you'll see they're no small thing. Some artists he wears the Mark 3 5D, another 7D II mark, and both do perfectly on a professional level. ZHIYUN Crane M2 [Official] Gimbal Stabilizer 3-Axis Handheld All-in-One Covering Daily Events Photograph: Use a compact camera, mirrorless camera, camera of compact pin design and unique pin lock design to prevent the shaft from swinging. Remove,.....-6: Pan Tracking(PF), Full Trace(F), Lock(L), Full Range POV,... We think it's a blast what this stabilizer offers compared to others on the market. It will take a long time for Crane2's performance to match as its small size, weight and charge are difficult to improve. Of course, there are other large stabilizers that allow for more cargo, and smaller ones with a smaller charger, but Crane 2 has the perfect load-sized-to-weight ratio. In addition, for all the features and accessories included in the price is very cheap if you are going to get professional performance. If not, there is another Zhiyun stabilizer with very similar features but with less cheaper cargo: Crane Zhiyun Plus. The best Zhiyun Crane/Crane 2/Plus deals if this Zhiyun model isn't what you're looking for, there are other stabilizers of the same brand. It 2, it's currently the brand's flagship, but perhaps you're looking for some cheap stabilizer with less performance. We leave you a list of crane model offerings. • Product rating price preview 1 ZHIYUN Lever M2 [Official] Handheld Gimbal 3-Axis Stabilizer No Ratings 219.00 EUR Buy on Amazon 2 ZHIYUN WEEBILL S (Newer Version) 3 Hinge Stabilizer Gimbal Handheld for...
