## Graco project painter plus review

So, are you ready to graduate from the airless paint rollers and brushes? And you may find professional nebulizers that look and behave, but it is not quite so, well, intimidating? Graco, who billed himself as a choice of professional painters, also probably checked all the boxes for DIYers and manufactured entry-level air-free nebulizers. Project Painter Plus comes close, although the bigger brothers may not be able to do everything they can. Graco has long been synonymous with quality, durability and value. The Minneapolis-based company has been manufacturing high-quality fluid treatment systems since 1926. Paint nebulizer is a tool for 85% of American painting professionals. So, it's nothing they call themselves a brand favored by the pros. The company does not settle for laurels. They are constantly innovating in the field of paint spraying and introducing new technologies. Most customers testify to Graco's excellent customer service. Whether they need advice or are looking for a product manual, they move on to help them. The graco Magnum Project painter plus believes in the power of the machine with its small size and low profile. This small airless painting system packs punches. It weighs only 15lbs, so it's light enough to move around frequently or carry it together while drawing. The compact 12x 13.5 x13.5 makes it easy to store. Even the barrel handle is integrated into the body. It does not take up much space in the tool or garage. As with other airless systems, there are many preparatory tasks, and removing the pump fluid can make it a bit messy. Waste is a small problem because paint quarts are priming. However, the suction tube is supplied directly to the paint can, saving a lot of time. The piston pump is made of stainless steel, robust and durable and requires the life of the system to last. The system can also withstand spraying thin materials at higher pressures. Up to psi2800. If your direct feed system is your suction tube can be attached directly to a gallon or 5 gallon of paint cans. You don't have to mess with moving paint from can to cup. And you don't have to stop painting to keep filling the paint cups. The 25ft Duraflex hose itself is flexible, allowing the system to easily operate the work site. A 50-foot hose is also available. A sophisticated and hardy engineering product, the full metal SG2 spray gun features a handle filter to prevent gunks from reaching the spray tip. I was a little painful to read the gun leaking. However, tightening the components of the gun solves the problem. A nice RAC IV spray tip is reversible, so if it turns black, it's easy to stop tipping. Graco Project Painter Plus can accommodate spray tips with opening of up to 0.015 and limit the range of materials available. As a strange job seeker, what I appreciate the most about this system is adjustable pressure control. With a twist of the dial you can change the air pressure to suit the app. The maximum pressure is 2 800 psi. The dial features an easy-to-read diagram to make the right choice: another great feature of prime, paint and cleaning is that you can switch nozzles from vertical to horizontal spray. Clean - and we all hate cleaning after ourselves, we don't? – It is simply done by the PowerFlush adapter to connect to your garden hose. You attach the system to your garden hose, choose a clean on the control dial and move away. It's not an immediate cleanup, but it goes a long way to help. The kit comes with an additional compartment for spray guns and power cords. In other words, you have everything you need in one place. Extension tips, for those with high jobs, are available as after-sales accessories, longer 50-foot hoses and pressure roller kits. You can not have good without bad, right? Graco prides itself on producing tools for professionals. However, there is no bone about the fact that the project painter is targeting the handyman or DIY market. System builds are robust enough, but they cannot withstand the rigors of using 24/7. Some contractors recommend using the system as a backup if you are in jam. My main bug bear for the system is that the pump cannot be repaired. It should be replaced when it is disassembled. Only suction tube kit strainer, gasket and fuse can be used as spare parts. However, Graco will replace defective products within reason. First, you need to register your nebulizer with your company. It's worth taking the time to do that. Another problem is spray tips. First, if you don't want to shell out more money for one spray tip, extra tips are a bit of a problem. And the maximum size to accommodate .015. Inexperienced men and women I would recommend project painter plus for drawing a large surface ever interior wall like a large room. Flexible hoses and extension tips help you navigate the space easily. However, there is a significant amount of paint waste on setting and cleaning. So, I think the project will be wasted in a small room that can be painted easily with angry plus rollers and brushes. In addition, the fan width may be narrower when spraying into a small space. The system is so portable and can use a variety of extensions, which makes it a great way to spray the ceiling. Prepare for safety equipment and prepare your racket. The airless nebulizer is never quiet. If you follow the specifications Manufacturers of paints and nebulizers, you should be able to achieve a so smooth finish that even experts will impress. The system handles textured surfaces such as dreaded popcorn ceilings that collect dust and dust. I know that dyeing the fence again or repainting can be the right pain in the rear, just ask Tom Sawyer. Project Painter Plus is designed with this kind of tedious and strange work in mind. You can handle most paint smudges and most. We recommend a narrower 8-wide spray pattern and a .013 tip size for decks and fences. I think you'll be able to complete the task with some of the time and much less complaining. It is a must-eat on windy days and covers the nearby surface and lars garden bed. I saw the results of many decks completed using The Graco Project Painter Plus, applying both schiller and stains. The versatility of the expansion bars available for Graco typically means the end of the back-breaking operation. It's easier on your knees. Like fences, the tip uses a small narrow spray pattern. Unfortunately, Project Painter Plus only offers .015 tips. I always defend my need to buy more spray tips, say it's always useful to have a range of sizes around you. The finish is too soft and regular, so it is often recommended that there is no air when drawing doors and trims. A regular brush or roller leaves a mark that appears to be completely unprofessional. Graco Project Painter Plus is a great nebulizer for doors, especially if you're going to spray more than one door. But I saw that they used to have a big impact on kitchen cabinet doors. It is also good for shutters. One of the drawbacks of Graco PPP is that you can only take up to .015 spray tips. In other words, latex cannot handle thick paints such as exterior paint. You probably need a more oomph and capacity system for bigger spray tip holes to spray the entire appearance of your home. It works well for small external projects. I have followed an online debate about using spray-free spray-free nebulizers for paint cars. As crazy as it sounds, there are people out there who claim to have successfully used airless in cars. However, the Graco Project Painter Plus has not been made for this purpose and I would not personally recommend it. Automatic enamel can contain a hot solvent, a recipe for disaster. Rather, using HVLP to draw a car, x5 comes with a bigger brother of painterPlus. It's attached with RAC reversible tips, duraflex hoses, garden hoses and garden hoses. It has more oomph than Angry Plus, with a flow rate of .27GPM compared to 3000 vs. 2800 with PSI. A longer 75ft hose is also convenient when using a ladder or height. It is limited by a maximum spray tip size of 0.15 0.15 like its baby brother. So, it probably won't work for a professional contractor but experienced DIYers will probably love it. Suitable for interior projects, decks, fences and even the appearance of small houses. It retails at just under \$300, which is cheap and good value for money. This unit is a little on the expensive side at about \$320, but it doesn't necessarily give you more bang for your bucks. That statistic compares with Graco Painter Plus: a 25-foot hose, a .25 GPM flow rate. The maximum PSI is 2500 and the maximum tip size is .015 again, so it does not handle thick materials well. It's too heavy, at about 23 pounds. It's also aimed at DIYers and novice nebulizers but I think most would be put off by weight. It is also very large, and difficult to keep. At up to 2500 PSI, I can't imagine you will get the kind of pressure required to place thick material PowerFlow Pro and Graco Angry Plus fighting in the same class. Similarly, when priced, the same flow rate of .24GPM and PSI is 2800, and both come with a 25-foot hose. The PowerFlow surpasses Graco for a few pounds, but it's compact. HomeRight recommends external, garage and window spray sprayers. Some users have complained that they can't follow the thick exterior paint, as expected because the maximum tip size is also .015. FLEXIO is a large-capacity low-pressure (HVLP) atomizer, which is useful for detailed tasks such as trim and furniture. You'll have more control over HVLP but you're not going to spray the whole house with it because the gun is supplied by a siphon cup. It would be great for a small indoor project. It comes with its own retail for about \$170 on Amazon. Graco Project Angry Plus retails at around \$200. If a retailer asks for more than \$220, you are torn in my opinion. Especially if you want to buy additional tips and tip extensions. It retails for \$219 shades from Home Depot to \$270 at Walmart. For less than \$200 on Amazon - you can choose a new unit. New, it retails at \$219 on Amazon. Like many other DIYers, I always use Amazon for my tool purchase because it's easy with a single click. With purchases of over \$25 shipping is free in all states in the United States within 5-8 working days. I'm willing to pay an extra few dollars sometimes if I need same-day delivery. And with Amazon you can return back within 30 days if you change your mind. For sale today grau 257025 project sold on Angry Plus ... Control paint flow: fully adjustable pressure ... Spray paint non-thin: stainless steel piston ... Spray directly from the paint bucket: flexible ... Recommended Annual usage recommendations are... Click here to check the latest prices for metal SG2 spray guns. 515 RAC IV spray tips; 25-foot duplex hose; Pump armor; Keep it clean with a stacked quick start guide. One of Graco's entry-level machines, the company had in mind when designing this easy-to-use device. It's very light at 15lb, so it's easy to carry from project to project. Oil and water stains and paint smudges are rated, but up to .015 tip sizes do not handle thick materials well. If you are unsure, always contact the paint manufacturer or Graco. Cleaning up with all spray systems can be time-consuming, but it must be done. At least hose attachment does away some of the hassle. If it fails during normal use, there is a lifetime warranty on the motor and a one-year warranty on workmanship and material defects. Yes, you can use Graco Magnum Project Painter Plus to spray a variety of paints, lacquer, primers and finishes, including oil and water-based paints. There are size limits for tips, so make sure that certain paints meet the usage limits of your tips. Yes, Project Painter Plus can spray most lacquer and varnish regardless of style, thickness or conversion. To ensure proper spray of paint, you should choose the right tip. The full tip selection guide is in the user's manual to help you choose the right tip. For most cleaning operations between uses, simply remove the system with water. Garden hose attachments are included to help you clean up a simple and efficient process. If you are using oil-based paints, you should clean them with a mineral spirit solution instead of regular water. If you're a handyman with a big dream diyer or to-do list out of control, Graco Project Painter Plus is right in the alley. It was built to make it easy to handle medium-sized projects around the house. Graco is designed with customers in mind, from compact and lightweight frames to flexible hoses and suction tubes and flush adapters. It doesn't stand to the stress of rigorous everyday tasks, but it's made for it. In my opinion, it is a good kit if you have a good little backup if you start out or run your own contract business.
