## Samsung galaxy themes app

Prior to Samsung's Unpacked event for Galaxy S10 phones, a Reddit user noted that Galaxy Apps is being renamed to Galaxy Store. In addition to the new name is the aesthetics of an updated user interface. As with other One UI-fied Samsung app headers, the Galaxy Store header occupies nearly half of the real estate on the screen. That may seem like a waste of space, but you can reach more of the app with one hand. Reddit Based on screenshot, Galaxy Apps' top navigation menu has been moved to the bottom in the Galaxy Store. Galaxy Store also updates navigation menu options: Home, Games, My Galaxy, and View. Previously, the navigation menu consisting of Trends, Games, Exclusives, Superior and Gear. Finally, it looks like Samsung slightly redesigned the app icon. The aesthetics of the wire and the bright colors of the past have been replaced by thicker lines and darker tones. It's a more subtle difference, but it aligns with the other icons in a user interface. As nice as the Galaxy Store may seem, a Reddit user noted that the updated app does not comply with the system-wide night mode found in a user interface. That would be a disaster if true, although that could change with a future update. The renowned Galaxy Store is now being rolled out as a mandatory update. Watch for version 4.5.01.7, which weighs just over 20 MB. Tagging: Samsung Samsung One UI Is your phone exploding with notifications all the time? About half the time they are not even useful, so Samsung is allowing Galaxy S8 users to customize all notifications to their specific needs. It's easy to turn off notifications for all apps, but Sammy takes it a step further by allowing users to point to apps that need to send notifications. One can even get into specific apps and really get intricate with notification behavior. No-sound notifications, lock screen behavior selection, and priority status settings are all the possibilities you can dive into. Let's show you how it's done. How to disable notifications/onGo to Settings. Select Notifications. Toggle All apps on/off at the top. Alternatively, you can select which application notifications should be turned on/off. Notification behavior of the individual application So of the notification settings, select an application of your choice. Turn on Allow notifications to receive notifications from the app. Toggle Show silence to block previews in pop-ups, block sounds and stop vibrations. Select On the lock screen to decide whether to show content, hide content, or prevent notifications from appearing on the lock screen. Turn on Set as Priority to allow notifications to appear and turn on the screen, even while Do Not Disturb is turned on. There you go, guys. Now you can go and adjust how your notifications to maximize efficiency. Samsung UK today released My Galaxy, a new app for its Android smartphones. The app incorporates user

guides for Galaxy phone features, official news from the company's social media channels, a built-in Samsung accessory store and offers exclusive to Samsung device owners. There is also a wizard function on the device for troubleshooting. To get started with My Galaxy, you'll need to cough up some personal data through the email registration process (it's not currently working, as far as we can tell) or log in via Facebook. The app is at least well designed, and seems to broadly comply with Google's Android design guidelines, although you'll want to check the Settings panel to make sure you don't mind unwanted notifications. The My Galaxy app is now available on Google Play for Galaxy S2, S3, S4, Note, Note 2, S3 Mini and Galaxy Fame users, and Samsung says it will be preloaded on upcoming phones sold in the UK. SAMSUNG UNVEILS 'MY GALAXY' SMARTPHONE APP Samsung launches a new app to help customers get the most out of their smartphone September 18, 2013, London, UK: Samsung Electronics today announced the launch of My Galaxy, an app to help Samsung Galaxy owners get the most out of their smartphones. App content is uniquely designed to deliver the most personalized customer experience. Created in collaboration with Monitise Create, Europe's leading mobile innovation agency, My Galaxy is packed with features that truly unlock the benefits of being a Samsung customer. Customers can take advantage of a wide range of exclusive offerings, from movie and music content to live event tickets. You can learn about the latest accessories for any Samsung smartphone through the app's m-commerce showcase, with access to over 300 products and real-time stock availability. My Galaxy will tell customers about the latest software updates and connect devices with interactive tutorials, and will also clarify any questions they may have about the services and features of their Galaxy smartphone with the wizard on the app device, powered by Google Voice. Simon Stanford, Vice President of IT & Mobile Division, Samsung Electronics UK & Ireland, said: The introduction of My Galaxy brings together everything a Galaxy owner needs to get the most out of their device and we are thrilled to pioneer the concept first in the UK. Samsung is committed to using technology to make life easier for our customers, and My Galaxy does just that. Samsung has an incredible range of offers and we are having worked with the team there to create a perfect proposal that brings to life all the benefits of being a Samsung customer. From technical support to app recommendations, My Galaxy puts you under the skin of what customers want from your smartphone and brings them together in one place. Once again, Samsung is really at the forefront, says Adam Levene, Senior Vice President of Strategy, Strategy, Create. The Samsung My Galaxy app is available for download from Google Play now for Samsung Galaxy S II, Galaxy S III, Galaxy S4, Galaxy Note, Galaxy Note II, Galaxy Fame and Galaxy S III Mini customers. My Galaxy will be pre-installed on devices sold in the UK later in 2013. Samsung makes some of the best business phones and tablets around. And now the company has launched a revamped app store for those devices that is full of apps that increase productivity. Galaxy Apps is a unique app store that has a lot of overlay with Google Play, but it also has many options that you won't find in Google's app directory. If you have a Samsung phone like the Galaxy S5 or a tablet like the Galaxy Note Pro 12.2, read on to see seven of the best business and productivity apps in the Galaxy Apps store. Business Calendar (free) The business calendar with the right name could be the best calendar app available to business users on Samsung smartphones. The app allows you to quickly focus on specific chunks of your schedule by dragging your finger over several days, reducing the view to include only those days. From there you can add or subtract days to get the optimal view of your next week. It's also easy to switch between day, week, month, and year views. In addition, Business Calendar has plenty of options to set reminders so you don't be late for a major appointment and allow you to set up regular alerts for those weekly business meetings. CamScanner (Free) CamScanner replaces your office scanner with your smartphone's camera, allowing you to easily create a PDF from a physical document by taking a photo. The app can automatically straighten, sharpen and enhance your photos to create a PDF that is clear, readable and ready to be shared with co-workers and colleagues. And it has text recognition software, so you can search for a particular scanned document using keywords. It also has tools to allow you to edit documents and add notes, watermarks, and annotations before sharing them. And to ensure you don't lose an important PDF, CamScanner automatically backs up all your documents to the cloud to make them accessible from anywhere. Evernote Evernote, one of the best note-taking apps, is also available through the Galaxy Apps store. The app allows you to quickly capture notes and photos to save them for later. When you want to take a note, you can write it or take handwritten notes with a stylus. You can also take documents, business cards and receipts so you don't lose them. The app uses text recognition software to index your notes and photos, so you can search through them later using keywords. You can also create to-do lists, set reminders so you don't forget a particular task, and mark items with a single tap. And because Evernote is available for almost all mobile and desktop platforms, your notes sync automatically all your devices. Splashtop 2 Remote Desktop (Free) Splashtop 2 is the best remote desktop app in the Galaxy Apps store. Simply put, it allows you to access your office PC directly from your Samsung mobile device. It acts as a direct portal back to your work desk, including all files and programs, as long as the PC you want to connect to is powered on and run the Splashtop client program. Once you connect, you can view and manipulate files, manage your email inbox, and even run desktop programs like Microsoft Office or Photoshop directly on your smartphone or tablet. It's a useful tool if you forget a file on your computer, or need to quickly access a program that you don't have on your mobile device. OfficeSuite 7 (Free) OfficeSuite 7 is a feature-free productivity suite for Samsung smartphones and tablets. It combines a word processor, spreadsheet editor, and presentation builder into a single application. And it has a total of formatting options to allow you to adjust fonts, colors and text alignment, as well as a built-in spell checker and predictive keyboard that helps you type on a small touchscreen keyboard. OfficeSuite 7 also integrates with cloud storage platforms such as Box, Dropbox, Google Drive, OneDrive, and SugarSync, so your documents are backed up and accessible from anywhere. Completed documents can be shared by email, Bluetooth, or with a link to your cloud location. Evernote Hello (Free) helps you meet new contacts and remember them. Instead of exchanging business cards with a new contact, simply add them to your Evernote Hello directory. You can take a picture of them on the spot, or import a photo of one of their social media profiles. From there, you can let the app extract your contact information from your address book or enter it manually. The app integrates with LinkedIn to help you quickly fill in each entry with personal and professional details. It also allows you to quickly add notes to a contact entry, so you can easily retrieve your previous encounters with each individual. File Explorer Pro (Free) Your Samsung smartphone or tablet may be a good tool to help you stay productive away from the office, but compared to a laptop its file management capabilities are quite limited. That's why a good file manager like File Explorer Pro is so useful. The application allows you to locate the application by searching for file names, or the through categories such as documents, photos and folders. When you find the file you want, you have the option to open, rename, copy, cut, paste, or delete it. You can also move it to a new folder. File Explorer Pro stands out among other file management applications because its minimalist interface is simple and easy to use. Use. Use.
