Marmot kompressor plus 20l daypack

The compass plus is a modern look, minimal and well-regarded bag. This way people engaging in advertising activities like walking, walking, bike riding and traveling will be the best suite. It has simple features that make life easier and fits everyone while using it as a simple day pack. For me, it's a little expensive when especially similar, compared to the pack, but with the compass plus, you get this interesting and accurate minimal build and it really provides everything you'll need and a light pack you'll expect. If you can imagine yourself using the compere plus for multipurpose activities after reading this review, and you want to make sure that you have spent money well on a bag, Personally recommend buying 20L bags in addition to the Marmot compreser. For the first time to play this kind of article, Insaconabeli doesn't have to buy a small bag to climb the mountain special, so all the time the class had to put a big thing in the outer bag to make the best efforts, first of all, but one day, I found For years all has been extremely painful with me but never has such a thing happened, such as if to see the strongest giant in mind (should not be bad) suddenly grow a white hair, a moment of heart, so find a good partner who can help to share it The results found this lucky person-the few points attracted the most from me: 1. With the wave well around with the same as with the search for a good partner, easy to see is very important to see. At first glance, it seems very basic, but usually the small back is already very interactive design, not only take the landing bus when you don't need to get both middle-class plug-ins in the back (auto-injection), the whole is a big bonus. The positioning is the top bag of the composer plus, of course is the very important function, a small one can harvest a little in the big back, with some bag is different from a soft back plate, for its very thin fabric, a little extra plastic Special price, well I recognize that if it is not just to see this price below the market price, then it cannot be specifically closed----- . That's the mesch shoulders, attached to two axis, stability without weight, extreme complexity, semi-sabilly, log-to-day hiking, portable closed cell back Sheet, Remove Belt Room, Sternum Strap Main Material 210d Naalon Double Rapstop Viad, 70d Double Rapstop Viad Silicon Colored Naalon Weight 0lbs 12oz () 348g) Volume 1220ci 20 litre pack abid (inch L x W x D) 20 x 10.5 x 8.5 Red Material 210D Naelan Double Rapstop Viad Bag Included In Front Easy access to pocket, maps, headlights, windshields or other small items. Access. The size of the sampperon plate on the edge of the bag works leaner and easier. The mesh bratably shoulder straps make the back more comfortable and more comfortable. Additional: In the Companion series, the backup plate's striking design (or back pad) began with the intelligent design, which was sold at K2 Games in Marmot in 2004, then the wise design today's Marm The product of the quote is seen in 1996 (the above information is only for reference)-----the image to tell the story is beautiful blue, plastic set is just a symbol of open box text, no attention haha, The color is really similar and the official website Skimtalk is similar (mainly very concerned about the color difference, but only a little black), the original ding of Vietnam is a cool plastic look, before there is nothing to support the massive one, A little less. How to explain, this is a Concept XD) tag model number 25310, the nardjikeris is described in front of a small, weight is only 348 grams, almost any weight in the right side of the compereer plus Words can't feel, because this top bag is a little zoo to people, all filled in a sense of a million dollar bag design in all sorts of different things and strengthen it on the right, The left and right sides can be used to fix the top edge of the climbing cane net bag and the toy point pure bag towards the climbing cane/snow so choose to store small things When using a little more zapar to make it easier to wear gloves, the ten main event full bags of buckles on both sides have to make a little more attention, make simple look and then the bag won't shake things around, The exterior hangs is not known to take steel cups and is not so suitable, because it feels too much support power top bags small circles (it didn't come picture), candy, coccies, headphones, mobile phones, boots using the zapar design and the machine Anyway it's the BTW Top Bag Zapar design double-sided, because it contains itself when the bag is in the body top bag (the back will show) the place of the main bag can plug up the big things, No basket, the main bag at the bottom of the fabric does not know what effect is not there, the length is not enough to extend out the bag, or need to be removed in time to hold? The tall person asked to look back at the bar, the mesch-braitable shoulder strap though very thin but should be very useful, a chest box wet on the baba seat in a small noisy room I'm sure the exterior should be almost crazy, not very reliable things, the sound is not big, it's not too good to hear (the habit of kissing), the sassor or a more appropriate back Good to buy After that you can come and get the game yourself! The following demonstrations first put the top bag (remember it's best to take the back plate out first) and then put the whole bag (currently only a naalan cloth) is easy to do in the last bridge on the zapar! The whole bag will be a very small crop, don't worry about destroying its structure so that after getting it, a bag of naelan cloth and a back plate can be the next test bag how there are many things on top of the bag, many things are not said to hold I want to test its ability, maybe think of things, a brush and warm clothes filled with bottoms, a set of spear fabrics, even with pesky steel cups finally easy to re-enact with trash bags and plastic bags Ding coldly want to put down a super-strong jacket just like that, in fact, still a small space within which is measured about five kg up and down, then single carry on belt and shoulder The large and slightly messy bag can not be attached to it very fully as a result (should be due to a bottle of bott), the center of gravity will not be stabilized enough, so it should have been slightly higher than the capacity of the bag (----- for the bag Receive 2. Small functions (pure bags, top bags, climbing canes or ice axis, can bind the place with water bags) 3. There is no limit to this size that can be adjusted: 1. Table cloth thin easily peeled 2. Supported by a soft back plate alone, walking for a long time may be uncomfortable (after that will be slowly tested) (2/13 Update: No Back Painting is Not The Problem) 3. There is no supplement alveomy bag, if the water container is a kettle or bottled bottle more painful 4. Weight Total: Full features can carry the top bag, more but not heavier, with the use of water bags I hope you also like this article I hope you also like this article
