Protect yourself and others by monitoring all security information. Failure to follow the instructions may cause injury and/or damage! Keep instructions for the future. Damage can cause injury and injury or damage to property. Traditional siphon feed detail spray gun, designed to spray all light to medi-um viscosity materials. It has fluid and pattern control and is supplied with FEED – Method used to paint 8 oz. material cup. Compact design of the spray gun. makes this spray gun convenient detail, PRESSURE FEED - Method of paint touch-ups and small staining projects. Feed where the canister or paint tank is compressed to force the paint gun. With this method, internal or external air caps of the mixture are used. Pressure supply This guide provides information that is commonly used to spray heavy bodies, it is very important to know and not to process paints or large-sized projects. Stand. This information is provided by SIPHON FEED, a method of safety of paint supply and the prevention of equipment problems. To recognize this infor- where atmospheric pressure creates the form, follow these symbols. partial vacuum siphon paint into the gun. Only the outer mixture of air caps is danger shows DANGER ! using this method. Siphon feed is an inevitable haz-destructive situation, which, if not avoided, is used with light body paint. Do cause death or serious injury. GRAVITY FEED – Paint method Warning indicates WARNING ! similar to siphon feed may be a haz-method. However, the cup is inverted in a destructive situation, which, if not avoided, can lead to death or serious create positive fluid pressure to injure. Nozzle. Carefully displays CAUTION MIX – Mixing of paint and air! potentially haz- when which, if not avoided, may cause minor to moderate damage. INTERNAL BLEND – The process in which the weather report shows and the paint is mixed inside the air cap NOTICE ! important information immediately prior to spraying. This method, if not observed, may be best heavy healthy, slow drying cause damage to equipment. may only be used with the pressure supply method. Do not use quick unpacking drying paint with internal mixture. After unpacking the product, check that the paint dries inside and quickly clogs quickly for damage to the air cap. occurred during transit. Make an external mixture – before putting the unit into service, make sure that the fittings, screws, etc., the air and paint are mixed immediately after the leave. Nozzle. This type of mixture should be used for quick dried paints and do not use WARNING ! tool if damaged when you need high-quality finishing. shipping, handling or using. REMINDER: For warranty purposes, keep proof of your purchase with a date! Attach it to this guide or provide it for storage. © 2004 Detail Spray Gun BLEEDER/NON-BLEEDER – Indicates whether the air flows through the gun for quick or when the trigger is pulled. BLEEDER – In this mode, the air passes through spraying or not spraying. This mode is usually used when the air is supplied by a fast-acting compressor that does not contain a tank. NON-BLEEDER – In this mode, the air flow flows only when the trigger is pulled. This type of operation is used with a com-pressor equipped tank or with a large factory air system. VISCOSITY – Measurement of the resistance of the liquid flow. AUSTINA - Conversion of liquid into spray droplets (mist). MODEL CONTROL KNOB - Used to form a suitable paint pattern (size and shape) as it is sprayed from the pistol to the workpiece. LIQUID CONTROL KNOB – Used to combine the amount of paint mixed with air. PAINT TANK – Auxiliary compressed paint tank, allowing continuous spraying of large quantities of paint with a stop for additions, as in additions. It also allows you to use a spray gun at any angle or orientation. General safety information 1. Read carefully all manuals attached to this product. Be familiar with the controls and proper use of the equipment. IN297700AV 2/04 MANUAL
