If you want to capture some burning photos from your LG smartphones, you may need the best third-party camera app for your device. The latest iteration of the Pixel smartphone is movable the world using the Google Camera 7.3 app. And this is one of the best third-party camera apps that capture mind-blowing photos in almost any scenario. developers have transferred pixel 4 gcam mod for other phones. Here you can download Google Camera 7.3 for LG phones [for almost every LG flagship]. October 25: Added the latest version of the GCam Mod port to choose LG Phones. Google Camera for LG Phones [GCam 7.3] The new Google Camera 7.2 (and 7.3) APK is now available for LG G7 ThinQ, LG G8 ThinQ, G8S ThinQ, LG G8X ThinQ GCam, LG V40 ThinQ, LG V50 ThinQ, V50S ThinQ (5G) and LG V60 ThinQ. After some research, we found the best work companion for the above devices. Not only this, but also the program also sports anticipated features such as Astrophotography and Night Sight Mode. On the other hand, the default camera app provides basic features that work well. The results of the camera app are not as impressive as the GCam app results. As for features, then the latest iteration of the Google Camera app, named GCam 7.3, bag features such as astrophotography mode, night vision mode, PhotoSphere, Slow Motion, playground (AR stickers), RAW support, HDR+ mode, Panorama, Lens Blur, portrait mode (with Focus Slider), Google Lens mode and a few more. Here's a step-by-step guide on how to download and install Google Camera. LG G7 ThinQ, LG G8 ThinQ, G8S ThinQ, LG G8X ThinQ, LG V40 ThinQ, V50S ThinQ (5G), and LG V60 ThinQ. Download Google Camera LG G8X ThinQ, V40V50 ThinQ, &amp;amp; LG V60 ThinQ One of the best things about these smartphones is that it comes with camera2 API sports (out-of-the-box). Not only this, but almost every smartphone now runs android 10, which just means that we can install the GCam app without worrying about root access. From the links below, you can download the GCam port of your device. All thanks to BSG, Urmyn05 and Arnova8G2, who have purchased the program to work with these phones. Now let's download the app. If you encounter errors, such as failure or backlog, we recommend that you change your settings. Recommended settings: Download the configuration file with the best settings from the link below. After downloading the configuration file, navigate to the file manager and create a new folder called GCam. Open the GCam folder and create another folder with configuration7 name. Now paste the configuration file in the configsf7 folder. When you're done, open the Google Camera app and double-tap the black blank next to the shutter button. Tap the displayed settings available in the pop-up menu and press the playback button. Go back to the app drawer and reopen the app. As a result of the Open Google Camera Applications &gt; BSG Mod &gt; Input Model &gt; Change Config to Pixel2018 ZsIR HDR+. Under BSG Mod &gt; Input Model &gt; Interface Styles pixel 2 (or Nexus 6P) and Back & Back & Front Camera Pixel 3 XL. You don't need to change hdr+ enhanced settings and night vision settings. Turn on HDR+ in enhanced portrait mode. Screenshots: Note: Be sure to delete an older version (if installed) before installing a new Gcam Mod port. How to install Google Camera lg phones First download the app for your smartphone (from the links available in the download section) When this is done, install google camera APK. (You can also find the downloaded app in File Explorer) Open the app and grant you the right permissions, such as Camera, Microphone, Storage, and Location. That's it. So capture the beautiful moments of your life with Google Camera with your LG smartphone. You may also like - Download Samsung Galaxy A71 5G Wallpapers If you have any queries, lower the comment in the comments box. Also, share this article with friends. UPDATE: LG G3 keyboard LG G2 LG G3 keyboard Galaxy S4 and HTC One M8 Here you go: LG G3 APK files on your FAV G3 apps like camera, music, video file manager, etc. is already available for download and manual installation. You can download APK files from below, transfer to your phone or tablet and install it by turning on the installation in settings » security. For a detailed guide on how to install APK files on your Android device, see this page. Not a day has passed since LG announced G3, but we are already seeing its items are available to those interested. Compatibility? For obvious reasons, these apps won't work in the box on your device. Why, well, because they are made lg G3. However, we are speculating that older LG devices such as G2, Optimus G may run some of these applications. So if you're holding a Galaxy or, say, an Xperia device in your hand, don't be surprised if these programs don't work. For example, I could not install LG G3 backups and watch applications on my S4, and even after installing the camera program did not work. But we just know that these programs will soon be improved a little cool dev and will be available to a wider audience soon enough, when the minimum requirements for these programs will be reduced to os versions, OEM will not withstand, most of us will be able to install these programs. But that's why we have to wait now. It has not yet been confirmed which devices other than G3 are working on these applications. Obviously, these apps will not work on every Android We guess that you will need to be Android 4.0 and newer as minimal, minimum, 4.4 should work well, especially on LG devices. LG G3 APPS APK Via XDA Download and install LG G3 applications on your phone. After lg G3 launcher, wallpaper and keyboards at the time all other applications are published on other Android devices. Almost every new application of lg G3 software has been downloaded and can be installed on other devices. LG G3 has brought some really interesting improvements when it comes to software and applications. It has a redesigned user interface, optimized and better apps and in general it is a new experience for anyone wanting to test a new LG phone. If you want to enjoy the LG software experience without buying your phone, you can do it. Apps taken from G3 software can be installed on each smartphone. Here is a list of all available programs. LGAlarmClock LG Browser LG Browser LG Calendar LG Camera App LG Contact LG Easy Home LG Email LG File Manager LG Gallery LG Home LG Music &amp;amp; Video LG Notice LG Keyguard LG Easy & Lock Screen Settings You can download all of the above applications above here. Just download apk and install them as a normal program. Restart your phone and the installed app should be available. - Advertising - You can now enjoy programs from the new LG G4 on lg G3, because the system dump available to senior XDA forum member hoangnoa. Using the system dump, the forum member, LastStandingDroid, successfully migrated some G4 apps to G3. The developer also confirmed that these applications are running on LG G3, which is running android 5.0 Lollipop version build V20I. It shared a file of several LG G4 applications apk that can be installed on G3. This includes apk music, camera, video, galleries, music widgets, file manager and much more. Apps APKLGMusic LGIMELGHome LGCameraLGFileManager LGContacts & LGContactsProvider.LGMusicWidget.LGVideoLGGallery.LGConciergeBoard.LGCalendar.LGMediaFolder.LGVoiceRecordercamera\_configknown issues Create Collage in Gallery Gives FCTap Delete gives FC GalleryTap Album Creation (Save) Gives FCCamera Manual Mode appears partially working. Manual video photography does not give or saveSeping the installation guide below, you can download the apps you want to the G3 smartphone. Don't forget to back up all your important phone data. Installation instruction Step-1: Root LG G3 if you don't already haveStep-2: Extract .zip program file downloaded from the link above. You should get the following filesStep-3: Move two extracted files to G3Step-4: Install a file manager program, such as EU File Explorer, that allows root access. After you install the File Manager app, open it and enable Root Explorer from the Tools section of Step-5: Go to the folder where you saved the files (in step 3) of LG G3 copy. apk and lib folderStep-6: go to the system / / where you should see. apk and lib folder. Rename it to . apk.bak and lib folder lib.bak. This step is to ensure that you keep backup of the stock appsStep-7: After you rename it, paste .apk and lib folder hereStep-8: Set permission for file 0644 [rw-r-r-]Step-9: Finally, reload lg G3Your desired applications from G4 should now be LG G3. [Source: Android Soul] Switching the camera from the front / back, unfortunately, did not help. Going back to the next camera app and switching, then going to this cam app and switching again worked for me for some reason, but after a while locked back. Ah good. I liked it very badly. Last edited: June 10, 2016 Reactions: [email protected], czpvita and Pro49 Dear Developer Team, thank you very much for the V10 camera port lg G3 (Android D855 MM 6.0 series port A, B and C ). It's such a great camera apk. for me. Please let me tell you about some bugs in this V10 camera apk on my LG G3 (D855 MM 6.0 Series 30B) (LGCameraAppV10\_v4\_by\_yener90.apk) Manual Camera Mode 1. The front and rear cameras cannot be switched (you must reinstall before use). 2. MF & AF cannot switch (when I press MF, the program always turns off). 3. WB can not adapt red to the blue balance (the program can work, but WB has no effect). 4.ISO can not adapt between brightness - darkness ( the program can work, but there is no effect on ISO). 5. Recording is available for internal phone (cannot be saved on external card) 1 in auto-camera mode. The bottom of the mode cannot work (when I press the bottom of the mode, the program always turns off). 2. The front and rear cameras cannot be switched (reinstalled before use). 3. Saving is available for the internal phone ( can not be saved on the external card ). 1 in manual mode. The front and rear cameras cannot be switched (you must reinstall before use). 2. MF & AF cannot switch (when I press MF, the program always turns off). 3. WB can not adapt red to the blue balance (the program can work, but WB has no effect). 4.ISO can not adapt between brightness - darkness ( the program can work, but there is no effect on ISO). 5. Saving is available on the internal phone ( can not save on the external ) We hope that the developer team provides a better automatic apk. ( No roots ). By the way, thanks again for this useful camera app. Cheer up Tks. By the way, thanks again for this useful camera app. Cheer Tks. First of all switching the front camera try this when you ever try swicht front camera to choose the front camera from the camera swith and from the settings select the dual camera then again select automatic ... You will be fine as well as this camera apk mainly port LG G4 it manual mode support that our g3 we have to face some problem ... but on my d851 i did not encounter a force closing problem when i select manual focus. Also, g3 does not support manual mode... Reactions: Disneyje is the only cam I have that has a manual focus, exposure, raw material and ISO on my G3. ... also manual setup is working video too, but no 4k and SD card support now... only 1080p 30fps or less. so there is hope with extreme modifications on this v10 cam. . manual mode can work on our G3. . or maybe not. I don't know, I just share. . Sent from my LG G3 F400L using your data connection. Reactions: fireboy666 and Anik49 only cam I used, which manually focus, exposure, raw material and ISO on my G3.. also manual setup is working video too, but no 4k and SD card support now. only 1080p 30fps or less. view attachment 3785452 so it is with extreme modification in this v10 chamber. manual mode can work on our G3. . or maybe not. I just share. . Sent from my LG G3 F400L using your data connection. If any developer takes action to do so. Reactions: vic604 only cam i used, which manually focus, exposure, raw material and ISO in my G3.. Sent from my LG G3 F400L using your data connection. Could you share which program is this? Reactions: zxcvbnm3932003 First of all switching the front camera try this when you ever try swicht front camera select the front camera from the camera swith and from the settings select the dual camera then again select automatic .. You will be fine as well as this camera apk mainly port LG G4 it manual mode support that our g3 we have to face some problem ... but on my d851 i did not encounter a force closing problem when i select manual focus. Also, g3 does not support manual mode... Tks a lot. But the camera problem always occurs in my G3. By the way Bacon Cam is good. I think if the new version of the V10 cam app can continue ab, mf and iso (manual camera mode), it will be better than the Bacon Camera app. We hope to see a new version of this v10 camera apk LG G3:good: Last edited: June 22, 2016 port yener90 for G4 ... I tried it every option works well but I do not know about manual mode because I did not use it. .... If the front camera does not come to try to switch the camera several times. Installation: Just install it as a normal apk if it works you do not forget to click the thank you button. . It is possible to fully operate in manual mode, because after installing this program we get the full manual option if any developer looks at the program. . I works, thanks man +1 handheld camera works with ISO, mf etc? Page 2 I tried and it's not bad: Manual video 1080p/60; 4k ... So on, also for photos. I have several poems, although the application refuses to record a media SD card, giving and error that it is full, which is not the case. It also crashes by changing settings or switching between video and photo or between the front and back cameras. If I can help with some logs, just let me know.ISO, the shutter speed does not work in manual mode. You can choose any warrant, but when shooting is still automatic ISO. I use LG g3 with stock ROM Only a few handheld features are available on our LG G3 device What I know from the XDA forum is that our LG G3 device does not support camera api 2, so you can not use all handbag features like LG G4 and above devices. For me, Bacon Camera (from fgnm) seems to be a more suitable application to provide raw image and be able to manage some hand-made features with our LG G3 device: Using a camera app from LG G4, v10 ... and above interest until LG G3 supports camera api 2 ... and LG doesn't want to work for us so far. What I do know from the XDA forum is that our LG G3 device does not support camera api 2, so you can not use all the features of the handbag function LG G4 and above devices. For me, Bacon Camera (from fgnm) seems to be a more suitable application to provide raw image and be able to manage some hand-made features with our LG G3 device: Using a camera app from LG G4, v10 ... and above has no interest until LG G3 supports camera api 2 ... and LG doesn't want to work for us so far. Ahh - for the first time, I don't see people suggesting Xcam (Don't take me wrong, I buy their setting from Playstore as my support for my project. I hate it, but only some people still don't understand that Bacon offer a real handheld feature and for me, Xcam only offer RAW capabilities with the old LG camera UI and only fit people spend their time in LG G2 Camera UI.. that's it.) About camera2 API before i use LG G3. I came from the Xperia Z from it the previous day with 4.1.2 to 5.1.1, lollipop's. I'll remember back in the days when 5.0.2 was released, most people dissatisfied because Sony didn't implement the latest camera manual feature other than adding a pause option for video (finally) on our phone, but one day, a knowledgeable man came in and explained that all Lollipop devices got the Camera2 API. He said, Camera2 API came with 3 modes that are legacy, full and one more i forgot what it called, but it still has a manual function without dng RAW capabilities... So the Xperia Z got a legacy, which means we don't get the handbag function at all.. Assuming this case, I think the LG G3 also got the same case here. We have a legacy camera2, which means nothing... It's quite unfortunate because the Nexus 5 came up with almost the same specs as G2 got the Full Camera2 API.. why g3 has a slightly updated soc can not have? Ofcourse, it's a business strategy.. If we (G3 users) got that Full Camera2 API.. Will we buy their other devices, such as G4? I'm sure the answer will be NO unless people care about the updated SoC, which is the SD808 and more megapixel camera.. Sorry for the long history. . Sent from my LG-F400L using the XDA-Developers mobile app Last edited: October 12, 2016 Reactions: Breno Spangler because of lack of LG thing frameworky..so it's not going to work any CM7, 9, 10, 10.1, 10.2, 11, 12, 12.1, 13 and even 14! Reactions: PM80, good speed and tute123456 It does not change much. WB does not work. But, 60fps full hd vid works it's great, but after a while it turns to 30 fps why? what is it that open the camera not? ?
