For example, the 16mm sound film will be about 11 minutes. OTHER SERVICES WE OFFER Family videotape The VHS format is not only out of style, it's out of date: it's getting harder and harder to find a VCR in someone's house, let alone on the best buy shelf. The tapes are the film is booted by the VCR, and even in perfect condition only last about 20 years! Broadcast tape transfers manage to convert a wide range of professional videotape. These can be encoded in most of the right codecs for your file requirements. - Here's a fun fact: 8mm film reels are a movie format called because the film strip is literally 8mm wide. There are two main types, regular 8mm film and Super8 film. Kodak originally marketed the 8mm film as a cheaper alternative to the 16mm film. Spools actually contained 16mm film with twice as many sprockets so the film was recorded on one side, flipped to record on the other, and then split down the middle when processed. When you bring your materials for an 8mm film reel to DVD transfer, that's why your 8mm film yellow kodak boxes say 25 feet on them, but actually contain 50 feet of footage. The 8mm film officially ceased to be made until 1992, but his old homemade films could be as much as 85 years old. If older movie rollers have survived so long, you've been very lucky, but the time to convert your home movie rollers and transfer to DVD or USB (we're flexible) is right now. The dyes in his 8mm color film are already faded and will continue to do so. The impairment rate multiplies when you store film rollers in the attic, basement or any condition with unstable temperatures and exposure to sunlight. Our technicians scan your frame-by-frame film and do their best to provide you with a nice and optimized DVD or digital file of your priceless family films. Good news: if your movie's rollers have sound, we digitize it! If you want to convert your 8mm TAPES to DVD, please visit this page. If you have a different movie reel format, here you can find more formats. STARTING This is even easier than you might imagine. Images of a film reel can be measured by diameter. For example, one of the most popular 8mm rollers we see comes in the yellow kodak boxes. These fit in the palm of the hand and are 3 inches in diameter. This 3 inches means that there is 50 feet of film. You can view a full chart and learn in detail how to measure your rollers from our blog post here. How do I know if there is audio on my old movie rollers? If you don't remember if your old movie rollers have sound or not, we have an easy way. When I unroll you unroll one of your 8mm film rollers, look for a thin copper strip on the edge of the reel. This is an audio indicator! Be sure to check both sides as it only appears in Can Moldy film rollers be transferred? Usually yes, but occasionally not. We have the ability to do a surface cleaning level on the film rollers, but the significant mold on a reel can affect the quality of your transfer and sometimes a reel is damaged beyond saving. It's important to store properly and take care of any movie coils you haven't converted to DVD or USB yet. If we do not give you information about the regular 8mm film boxes in your home, we have even more information about this format. Read more 8mm film coils... If you are doing your regular 8mm film reel to DVD, we also provide digital files. What can you do from there? We have ideas for you! Read more about what comes next... After dinner, I showed old 8mm home movies from the 50s and 60s (plus some 1980s videos) that I recently had Everpresent convert to a flash drive. My family loved seeing them! It was bittersweet to see loved ones who are no longer with us (including my mother), but at the same time, it was comforting, too. And my children and my nephews liked to see older family members in their younger years (not to mention the old cars, radios, phones, etc. that appeared in the background of old movies). - Raymond A. Consultates from the privacy of your own home Perfect for large or complex projects with multiple formats Our certified consultants travel through the film coils of 8 mm northeast with or without audio on DVD or USB , in addition we will capture the labeling of the rollers digitally. adroll_adv_id = LCOBGXQTMGBGR3IM5MHMCVQ; adroll_pix_id = JLRYIOEGWJCZFMCIUUMX; adroll_version = 2.0; adroll_current_page = others; adroll_currency = USD; adroll_language = en_US; Your order includes a digital copy of your memories, accessible to your MemoryCloud account for 90 days. You can: Give the gift of memories! At the time of the original transfer Available within 90 days of transfer in Costco Photo Centers Small DV cassettes, known as size S or MiniDV, were originally designed to be recorded on magnetic tape and launched in 1995. Intended for amateur use, MiniDV has been accepted for professional use and is used for recording base DV, DVCAM and HDV. Typical transfer 31 - 60 minutes (\$21.42) See more Common Capacity: 60 min SP: 60 minutes LP: 90 minutes Dimensions 2.6 x 1.9 x 0.5-inch Foreign PAL format accepted ORDER TODAY VHS, Videotape, and 8mm film Transferred to DVD and Digital Are all your memories stuck in old-fashioned media like 8mm Movie, VHS VHS-C, Video 8, MiniDV or Mini DVD? Many of these older video formats are not very good at storing long-term memories. Converting VHS from your favorite memories will prevent your precious legacy from fading. Even when VHS tapes are not played, quality and durability decreases as the years go by. 8MM Movie tends to be a little more stable, but certain colors will fade over time. No one wants to see the once crisp images of loved ones yellowing in memory or looking a little blue. At iM Video Transfer, we encourage you to remove dust from your old VHS tapes and revisit memories trapped in old media formats. your old and underutilized VHS tapes and 8mm movies on new DVDs or digital files. Our Video Transfer technicians will give new life to your memories with editing, music, color correction, customization, and more! We also take special projects! If you have an old slide collection or we can put them on DVD or a digital file. too! Call today to discuss your options!330-272-1116 Just8mm remains open. Your support means everything. Please stay well! It's as easy as: full form and print order. Sort and label your movies. Pack and send your movie. We process and send in about 7-14 business days. (note that rotation schedules can be extended due to the Covid-19) Enjoy your DVD or digital files! How order quality works – We use the 8mm film transfer method giving the most accurate replication of movement, color and clarity. Experience – Since 2002, we've transferred over 79 million feet from 8mm and Super 8 film. Price – Our prices are among the lowest in the industry and you pay only what you actually have, unlike those companies filling a box. Speed - 7-14 BUSINESS DAYS from the moment we receive your order until we send it. (note that rotation schedules can be extended due to the Covid-19) Backup – Archive all commands and access these files only at the customer's request for additional copies in the future. BBB Accredited - We are classified as A+ and have been awarded 11 Gold Star Awards. Hi, I got my DVDs back and wanted to tell you how glad I am with them. These films are almost 50 years old and never stored properly as they should have been. I can't believe how good they still looked. This film is footage from the first time the National Park Service decided to patrol the Colorado River at the bottom of the Grand Canyon. I had recently been in touch by the Grand Canyon Historical Association for information about my being part of this ship crew. When I told them I had these movies they got really excited. I told them I would have transferred them and taken them to my first interview with them. I think they'll be happy with them. I have a lot of old family films that I wish I had transferred. Just to let you know, I'll send you by transfer. I am a very satisfied customer. Thanks for the good work. We offer prices that are simple to understand, all inclusive, and among the lowest in the industry, starting at just \$9.99 per reel. Using patented equipment, we are able to transfer 8mm to DVDs or digital files with impeccable quality, resulting in a very high resolution image that is free of blinking, access points and halos, and is evenly illuminated and focused. More information & how long does it take? We have a fast and efficient investment time of about 7-14 business days from the time we receive an order until we send it back. (note that rotation times may be extended due to the Just8mm.com represents the best combination of value, quality and service available for 8 mm to DVD or 8 mm to digital file transfers. More information & What happens if I lose my new DVD or files? Just8mm.com files of all your 8mm movie transfer images for a minimum of 6 months at no additional charge, and this an additional layer of protection should you lose or break your DVD, or simply want additional copies or digital files later.
