Comparing and scaling investigation 3 answers

HLO Investigation 1 Investigation 2 Investigation 3 Learning Targets and Khan Academy Links 4.1 I can calculate the unit rate for real-life situations by dividing the ratio (fractions) by dividing to solve the problem to find the relationship between two units. (7.RP. A.1) For example, if a person walks $\frac{1}{2}$ mile in every $\frac{1}{4}$ hour, calculate the unit rate as a complex fraction $\frac{1/2}{1/4}$ miles per hour, equivalently 2 miles per hour. Rate Problems with fractions 4.1 I can recognize and represent a proportion as a declaration of equality between two relationships. (7.RP. A.2) 7.RP. A.2 (5 Practice Items) 4.3 I can analyze two reports to determine whether they are proportional to each other with a variety of strategies (for example: using tables, graphs or images). (7.RP. A.2a) Identify proportional relationships by identifying proportional relationships with Graphs 4.4 I can identify the proportionality constant (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relations. (7.RP.2b) Speed problems with fractions 4.5 I can explain what points mean on a graph of a proportional relationship in terms of a specific situation and recognize what (0,0) and (1,r) on a graph represents, where they are is the unit rate. (7.RP. A.2d) Interpreting proportional report graphs 4.6 I can apply proportional reasoning to solve the multistep ratio and percentage problems (e.g. simple interest, taxes, markup, markdown, tips, fees, fees, percentage increase and decrease or percentage errors). (7.RP. A.3) 7.RP. A.3 (5 practice items) HLO Investigation 1 Investigation 2 Investigation 3 Learning Targets and Khan Academy Links 4.1 I can calculate the unit rate for real-life situations by dividing the ratio (fractions) by dividing to solve the problem to find the relationship between two units.
