For more information, see our Privacy Policy.× OC content available in the eBook SS Student solution available in interactive electronic text Preface iii 1 Introduction 1 1.1 Experimentation Strategy 1 1.2 Some typical applications of experimental design 7 1.3 Basic Principles 11 1.4 Guidelines for Experiment Design 13 1.5 A Brief History of Statistical Design 19 1.6 Summary : Use of statistical techniques in experimentation 20 2 Simple Comparative Experiments 22 2.1 Introduction 22 2.2 Basic Statistical Concepts 23 2.3 Sampling and Sampling Distributions 27 2.4 Inferences on Means Differences, Randomized Designs 32 2.4.1 Hypothesis Test 32 2.4.2 Confidence Intervals 38 2.4.3 Sample Size Choice 39 2.4.4 4.4.4 The case in which '21 ≠ 22 43 2.4.5 In the case of '21' and '22' are known 45 2.4.6 Comparison of a single average to a value specified 46 2.4.7 Abstract 47 2.5 Inferences on Means Differences, Twin Comparison Designs 47 2.5.1 The Twin Comparison Problem 47 2.5.2 Benefits of Twin Comparison Design 50 2.6 Differences Inferences Normal Distributions 52 3 Experiments with a Single Factor: Variance Analysis 55 3.1 An example 55 3.2 variance analysis 58 3.3 Fixed Effects Model Analysis 59 3.3.1 Breakdown of total square sum 60 3.3.2.2 Statistical Analysis 62 3.3.3 Estimation of Model Parameters 66 3.3.4 Unbalanced Data 68 3.4 Model Adequacy Check 68 3.4.1 Normality Hypothesis 69 3.4.2 Tailings Parcel in Time Sequence 71 3.4.3 Residual Plot compared to adjusted values 71 3.4.4 Tailings plots compared to other variables 76 3.5 Practical Interpretation of Results 76 3.5.1 A regression model 77 77 77 3.5.2 Comparisons between means of treatment 78 3.5.3 Graphic comparisons average 78 3.5.4 Contrasts 79 3.5.5 Orthogonal Contrasts 82 3.5.6 Scheffé Method to compare all contrasts 83 3.5.7 Comparison of treatment means pairs 85 3.5.8 Comparison of treatment methods with a control 88 3. 6 Computer Output Sample 89 3.7 Sample Size Determination 93 3.7.1 Operating Characteristics and Power Curves 93 3.7.2 Confidence Interval Estimation Method 94 3.8 Other Examples of Single Factor Experiments 95 3.8.1 Health Health Chocolate and Cardiovascular 95 3.8.2 Real-Economy Application of a Designed Experiment 97 3.8.3 Dispersal Effects Discovery 99 3.9 Model Random 101 3.9.1 A single random factor 101 3.9.2 variance analysis for the random model 102 3.9.3 Estimation of Model parameters 103 3.10 Regression Approach variance analysis 109 3.10.1 Less square Model parameters estimate 110 3.10.2 The general regression importance test 111 3.11 Non-parametric methods in the analysis of 113 3.11.1 The Kruskal-Wallis test 113 3.11.2 General comments on the transformation of tier 114 4 randomized blocks, Latin squares, and Related Designs 115 4.1 Complete Block Random Design 115 4.1.1 Statistical Analysis of RCBD 117 4.1.2 Model Adequacy Design 125 4.1.1.2 3 Some other aspects of the complete block random design 125 4.1.4 Estimation of model parameters and general regression importance test 130 4.2 Latin square design 133 4.3 The design of Graeco-Latin Square 140 4.4 Incomplete Balanced Block Designs 142 4.4.1 Statistical Analysis of THE BIDD 143 4.4.2 Small Squares Parameter Estimation 147 4.4.3 Interblock Information Recovery in THE BIBD 149 5 Introduction to Factor Designs 152 5.1 Definitions and basic principles 152 5.2 Factor Advantage 155 5.3 Factor Design 156 5.3.1 Example 156 5.3.2 Statistical Analysis of the Fixed Effects Model 159 5.3.3 Model Adequacy Check 164 5.3.4 Estimation of Parameters Model 167 5.3.5 Sample Size Choice 169 5.3.6 The inocelation hypothesis in a two-factor model 170 5.3.7 Observation per cell 171 5.4 General factorial design 174 5.5 Assembly response curves and surfaces 179 5.6 Blocking in a Factorial Design 188 6 Factor Design 2k 194 6.1 Introduction 194 6.2 The 22 Design 195 6.3 The 23 Design 203 6.4 General Design 2K 215 6.5 A single replica of the 2k design 218 6.6 Additional examples of unreprinted 2k designs 231 6.7 2k Designs are optimal designs 243 6.8 Adding center points to design 2k 248 6.9 Why we work with coded design variables 25 3 7 blocking and confusion in factorial design 2k 256 7.1 Introduction 256 7.2 Blocking a factorial design 2k replicated 256 7.3 Confusion in factorial design 2k 259 7.4 Confounding factorial design 2k in two blocks 259 7.5 Another illustration of why blocking is important 267 7.6 Confuse factorial 2k Design in four blocks 268 7.7 Confounding 2k Factorial Design in Blocks 2p 270 7.8 Partial Confusion 271 8 Two Levels Split Factor Designs 274 8.1 Introduction 274 8.2 The half fraction of the design 2k 275 8.2.1 Basic definitions and principles 27 8.2.2 Design Resolution 278 8.2.3 Construction and fractional analysis of half 278 8.3.3 The fraction of a quarter of the design 2k 290 8.4 The general 2k-pFractional Factorial Design 297 8.4.1 Choose a design 297 8.4.2 2k-pFractional Factorials 300 8.4.3 Blocking fractional factors 301 8.5 Aka structures in fractional factories and other designs 306 8.6 Resolution III Designs 308 8.6.1 Construction Resolution III 308 308 308 308 308 308 3088.6.2 Fold over resolution III Fractions to Separate Aliased Effects 310 8.6.3 Plackett-Burman Designs 313 8.7 Resolution IV and V Designs 322 8.7.1 Resolution IV Drawings 322 8.7.2 Sequential Experimentation with with IV Designs 323 8.7.3 Resolution V Designs 329 8.8 Supersaturated Designs 329 8.9 Summary 331 9 Additional Design and Analysis Topics for factorl and fractional Factorial Designs 332 9.1 Factor design 3k 333 9.1.1 Rating and moivation for 3k 333 3 designs 9.9.9 1.2 The 32 Design 334 9.1.3 The 33 Design 335 9.1.4 General Design 3K 340 9.2 Confusion in the 3k Factorial Design 340 9.2.1 Factorial Design 3k in three blocks 340 9.2.2 The 3k Factorial Design in Nine Blocks 343 9.2.3 Factor design 3k in blocks 3p 344 9.3 Split Replication of Factor design 3k 345 9.3.1 The fraction of one-third of factor design 3k 3k 3.3.2 Other factor 3k-pFralaction Designs 348 9.4 Factorials with Mixed Levels 349 9.4.1 Two- and Three-Level Factors 349 9.4.2 Two- and Four-Level Factors 351 9.5 Non-regular Fractional Factor Designs 352 9.5.1 Non-regular Fractional Factor Designs for Non-Regular Fractional Factors for Regular 6, 7, and 8 Factors in 16 Races 354 9.5.2 Unregulated Fractional Factor Designs for 9 to 14 Factors in 16 Races 362 9.5.3 Analysis of Unregulated Fractional Factor designs 368 9.6 Construction of factorial and fractional factorial designs at the Optimal Design Tool Help 369 9. 6.1 Design Optimallness Criterion 370 9.6.2 Examples of Optimal Designs 370 9.6.3 Extensions of Optimal Design Approach 378 10 Mounting Regression Models 382 10.1 Introduction 382 10.2 Linear Regression Models 383 10.3 Estimation of Parameters in Linear Regression Models 384 10.4 Multiple Regression Hypothesis Test 395 10.4.1 Regression Importance Test 395 10.4.2 Regression Coefficient Tests individual and coefficient groups 397 10.5 Confidence intervals in multiple regression 399 10.5.1 Confidence intervals on individual regression coefficient 400 10.5.2 Confidence interval on average response 400 10.6 Forecast of new response observations 401 10.7 Regression Model Diagnostics 402 10.7.1 Scale Residuals and PRESS 402 10.7.2 Influence Diagnostics 40 5 10.8 Test for lack made 405 11 Response Surface Methods and Designs 408 11.1 Introduction to Response Surface Methodology 408 11.2 The Method of Steepest Ascent 411 11.3 Analysis of a Second-Order Response Surface 416 11.3.1 Stationary Point Location 416 11.3.2 Characterization Surface Response 418 11.3.3 Ridge Systems 424 11.3.4 Multiple Responses 425 11.4 Experimental Designs for Mounting response surfaces 430 11.4.1 Designs for first-control model fit 430 11.4.2 Designs for second-order model fit 430 11.4.3 Response Surface Designs 437 11.4.4 Optimal Designs for Response 440 11.5 Experiments with Computer Models 454 11.6 Mixing Experiments 461 11.7 3 Evolutionary Operation 472 12 Robust Design Studies and robustness of parameters 477 12.1 Introduction 477 12.2 Crossed Array Designs 479 12.3 Crossboard Design Analysis 12.4 Combined Table Designs and Response Model Approach 484 12.5 Design Choices 490 13 Experiments with Random Factors 493 13.1 Random Effects Models 493 13.2 The Two Factor Factor With Random Factors 494 13.3 The Mixed Two Factor Model 500 13.13.3 4 Average Square Rules Expected 505 13.5 Approximate F Tests 508 13.6 Some additional topics on estimating variance components 512 13.6.1 Approximate confidence intervals on components variance 512 13.6.2 The modified large-sample method 516 14 518 14.1 Two-storey nested design 518 14.1.1.1 1 Statistical Analysis 519 14.1.2 Diagnostic Check 524 14.1.1.3 Variance Components 526 14.1.4 Interlocking Designs staggered 526 14.2 General design m-stage nested 528 14.3 Designs with the two nested and Factors factors 530 14.4 Design split-plot 534 14.5 Other variations in split-plot design 540 14.5.1 Split-Plot Designs with more than two Factors 540 14.5.2 The Split-split-plot design 545 14.5.3 Strip-Split-Plot design 549 15 other design and analysis topics (available in e-text for students) W-1 Problems P-1 Appendix A-1 Table I. Normal Standard Cumulative Distribution A-2 Table II. Distribution percentage points t Table A-4 III. Distribution Percentage Points 2 Table A-5 IV. Percentage points of distribution F Table A-6 V. Percentage points of the list of Statistics A-11 Table VI. Critical values for the Dunnett test to compare treatments with A-13 Table VII control. Orthogonal polynomial coefficients A-15 Table VIII. Alias Relations for 2k-pFractional Factorial Designs with k ≤ 15 and n ≤ 64 A-16 OC Bibliography B-1 Index I-1 I-1 I-1
