One of the most common requests for readers is to tell them how to fix the screen on Android. The functionality is around for all time but usually requires some tinkering and setting to get it. With Android Lollipop, it has a screen recording method for building the operating system, and that's how most people do it these days. Let's take a look at some Android apps and some other ways to get a screenshot. Please note that android pie changes prohibit apps from recording internal sound, so videos probably won't hear the sounds you're doing. It's unfortunate, but it's Google fault. AZ Screen Recorder Google Play Games Screen Recorder by Kimcy929 Twitch Vysor AZ Screen Ticket Price: Free / \$2.99 AZ Screen Recorder is the gold standard for screen recorder apps. It's light, light, easy to access and cheap. Contains an overlay button that does not interfere with the recorded content. In addition, you can add the front camera to things like game streams or commentary. Even a small video editor is built in. So you can shave off the parts that don't matter. Of course, it does not require root, no watermark, no time limit, and so on. The professional version goes for \$2.99. This is probably the best and most popular screen recorder available. Google Play Games Price: Free Google Play Games is not just a hub for mobile gaming. It also has a screen recording function. It's working pretty well. However, it is mostly only for game. Start the game with the screen recorder directly from the app. He'll record your stuff, then he'll stop as he should. You can get around the games just by limiting exiting the middle of the game recording and then going to whatever app you want. However, at this point, we would probably only recommend AZ instead. This is probably a better option for game rather than normal stuff. Screen Recorder by Kimcy929: Free / Up to 20.99 \$ Screen Recorder by Kimcy929 is a good, simple screen recorder. It does the basics quite well and has support for several languages. Some features include recording the screen, taking screenshots, support for the phone camera, and some super basic video editing at the end of your recording. It's good for simple things like showing off something on your phone or something like that. We still recommend Screen Recorder first, but it's not a bad (and simpler) option. The free version worked very well as well. Twitch and similar screen capture apps Preare: Free Many streaming services now include mobile support. Twitch and YouTube Gaming are two of the most outstanding. Simply stream your game like normal. Both services allow you to download the recordings after they are finished. This is a good solution for Especially. In fact, it's probably better than Google Play Games for this kind of stuff. Unlike Google Play games, kind of hard to use these apps or anything other than gaming. At least these services are free. Vysor and similar apps: Free with ads / \$2/month / \$10/year / \$40/lifetime Vysor is a fun little application that allows you to drop off your device on your computer screen via USB. From here you can use your computer or screen to record on your computer if you wish. It tends to work pretty well although you will need to fork out a little bit of money to get HD quality. This application doesn't record anything by itself, so you don't expect any opportunity to do so. You must record this on your computer. If this app doesn't cut it for you, TeamViewer is another decent option in this place. You need a screenshot app on your PC to take pictures. Other methods of screen recording There are other ways to record the screen on Android, and this hardware. There are two main ways to do this using hardware: If you have an Android Lollipop (or later) device, you can use ADB to capture the screen. There is a great tutorial you can read to learn how and find it by clicking here. In addition, Android 11 has a native screen recorder. If the feature goes to the full version, this will be the new easiest way to capture the screen. Professionals often use the recording card to attach and record their Android device directly to their computers. Capture cards can get quite expensive, but you get probably the best frame rates and quality. Plus it captures directly to your computer's hard drive, allowing for much larger recordings. Keep in mind that you will be working around some potential HDCP problems so you can get the old search engine up and running. Most capture cards come with screen recording software. This solves this problem for you. There are other apps like Vysor in the Google Chrome app store. The basic idea is to connect your phone to your computer. This reflects them on the screen directly to your computer. From there, you just have to figure out how to fix it yourself. This is not the easiest method for any stretch. Each application creates a different setting. However, this is an opportunity. Some Chromebooks now allow you to mirror your Android device directly to it. Of course, this requires buying a Chromebook. This is an unreasonable release that should be a relatively simple task. However, we are trying to cover all the bases and this is definitely an option. However, your Chromecast screen still requires an app. If you missed any great method of screen recording on Android, tell us about them in the comments! You can also click here to check out the latest Android app and game lists! Next - How to take a screenshot of Android reasons why you should record a phone call. Google's mobile operating system has no official way to do this. Android users know where one will be a way. Today we're going to show you how to keep track of mobile conversations. Google's operating system has no official way to record calls, but Android users know where it is will be. Edgar Cervantes Legal to record calls? Keep in mind that recording calls can have legal consequences. It is the responsibility to have research laws regarding the matter, whether it is local, state, federal, or international. In some places, a person's approval is required to record calls, while other areas require the permission of both parties. Bottom line, you'll want to make sure you find out what you can and can't do before moving forward. Keep in mind that recording calls can have legal consequences. Edgar Cervantes Google against call recording The same reasons mentioned above, Google has not been an advocate for call recording for years. Getting into trouble with governments all over the world is not fun! Google hasn't supported call recording in years. Edgar Cervantes The official API call recording was removed from the launch of Android 6.0 Marshmallow. Developers are hard to stop, so they found solutions to keep this feature alive, but Google eventually killed the possibility of recording calls with Android 9.0 Pie. Rumors of future aid have been circulating on the Internet, but nothing has been confirmed yet. Record calls to a voice recorder They who do not want to deal with disturbing applications, rooting, or any other complications can do things the old way. Just get yourself a voice recorder to store your conversations with the speakerphone. Quality is not ideal and requires physical action, but simplicity can save you some headaches. Recording calls with another device If you have a secondary smartphone, tablet, or a computer laying around, you can also use it as an impromptu voice recorder. Most smartphones have pre-installed voice recorder apps installed. If you don't want something more advanced, click on the button below for our recommendations. The best voice recorder apps for Android Record calls to Google Voice A most official way to record calls using Google Voice, a service offered by the search giant as well. There are some drawbacks to this service, though; this does not work outside the United States and can only record incoming calls. By the way, this is a great opportunity. You will receive a phone number that you can select from the list of available options. You can then attach another number to your account to allow you to forward calls and messages. Once you've set it all up, activating the call recording is easy. Access your Google Voice account online or through the official app. Access internet, this will be a gear button on the Corner. If you're using the app, this will be available under the hamburger menu icon. Find the Incoming Call settings and turn on the switch. You can answer the call to your Google Voice number. Tap number four to start recording. An announcement about recording the call has been played. Press four or stop the call to stop recording. Download Google Voice app Record calls from a third-party app Areare of third-party apps that record your conversations. Just remember, recent Android versions and some vendors don't support them. The best call recording apps for android We're still hoping for a native solution, or at least official support for call recording apps, but now these are the best ways to record phone conversations. Enjoy! Source: Harish Jonnalagadda / Android Central OnePlus added a native screenshot to OxygenOS in 2019, so if you're using a phone that has OxygenOS 9.5 or later, you can use the feature. You get a lot of customization options for the screen recorder, and the ability to record audio as well. Here's how to enable the feature on your OnePlus phone and maximize its potential. Add Screen Recorder as a shortcut The screen recorder option is available as a shortcut in the notification pane settings taskbar. It is not in the default pane, so you must add the tile from the settings customization window. Here's how to do it: Drag down the status bar to reveal your notification account. Drag it down again to reveal all the settings. To add more tiles, select the Pencil icon at the bottom of the notification account. Source: Harish Jonnalagadda / Android Central Hold and drag the Screen Recorder tile from below to the notification account. Select the position of the tile in the taskbar. Press The Back button to finish editing. Now the screen recorder shortcut appears in the notification account. Source: Harish Jonnalagadda / Android Central How to use the screen recorder on your OnePlus phone With OxygenOS screen capture, you get robust customization options. When you run the tool for the first time, you need to provide access to your phone's storage, voice recording, and network connection. If you agree, you'll see a floating widget with three buttons: a red record button, settings button and a button to discard the feature. To customize the recording settings, you need to introduce the settings. You can choose the resolution, the video bit rate (1-24Mbps), and the number of frames (15-60FPS). You can also choose a sound source for recording, either with internal sound or with the ability to record from built-in microphones. This option is especially useful if you are using a function you want to make a video tutorial. You can choose the orientation of the video, hide the floating widget, automatically pause the recording when the screen and show touch actions on the screen. Once you've set up your settings, all you have to do is press the record button on the floating widget to start recording the screen. Like all other OxygenOS, the screen recorder comes with all the customization options you want, and it's one of the best built-in recording features you can find on Android today. All you need is nothing you can do with the OnePlus 7T with a simple recommendation in 2020. The hardware still holds up great, with the Snapdragon 855+ chipset and 90Hz AMOLED display making the phone one of the fastest on the market. You can also get a modern design, decent cameras, and clean software with enough customization to satisfy the most demanding users. Users.
