Equip yourself for every situation with LaserMax Guide Rod Laser and get an advantage. · Discussion starter · #1 · 08/23/2018 How reliable is the Lasermax Guide Rod Laser System? You hear people talk about Plastic Guide Rods, Stainless Steel Guide Rods and Tungsten Guides and hear all kinds of opinions. So I'm curious to see how these Lasermax systems hold up. · · Mine worked well in my generation3 22. I only used it for about a year. Since I switched to gen4s, I can't use it anymore. I think it's in safety somewhere. · No answer to your specific question, but the purpose of metal vs. plastic guide rods is not to increase durability. · I have no direct knowledge, but when I asked the LGS, they all said they wouldn't risk the performance of their weapon with a guide rod laser. Strictly an assortment of toys ? Sure, who cares. But absolutely not with their sd/carry pistols. · The one I had was a Lasermax and it was scrap. Failure to feed from the moment I put it in until I took it out. Lasermax was also NOT a help. My advice to anyone who thinks of a Lasermax product is DON'T DO IT. Had my Lasermax guide rod in my Glock 19G3 for over 12 years and thousands of rounds. No problems. I'm very confident in the gun and in fact it's my primary going to gun. The laser is even after all the rounds through it and the countless times I disassemble/reassemble the gun. The weapon feeds well and I haven't experienced any FTF or RTD. I will continue my long-term stress test until it develops a problem other than an occasional battery replacement. Maybe the guy who had a problem with the Lasermax guide rod just got a lemon because mine still shakes my world. · I put one in my G27 and my holster would push the take-down slide over and activate the laser. I fixed the problem by selling it on ebay. · I only have mine for about 4 months and 500 laps. No FTF, RTD at all and accuracy is great. The target detection indoors and in low light is iron IMHO. It has never inadvertently engaged when holster is used or only in the waistband. Share GungHo Online Entertainment GungHo Online Entertainment JP: December 12, 2013 CERO 01 Puzzle & Dragons Z is a game for the 3DS based on the mobile game Puzzle & Dragons by GungHo Online Entertainment. It was released in the West as part of a compilation Puzzle & Dragons Z+ Super Mario Bros. Edition of Nintendo Gameplay You need to build a team of monsters and explore dungeons to fight other monsters. To attack or restore, you must create a row of three or more inheritances of the same type in a turn. For each move, you have a few seconds to touch and pull a ball, which displaces other spheres in the process. With careful planning and a bit of luck, you can create a combination (multiple lines) in one turn, which will produce greater results in this turn. Similar could capture any defeated monster and used in your team for future battles. Each monster has an element, and each element is strong or weak against another. It is recommended to build and customize your teams for each situation, as some battles have themes or limitations. Plot Monsters Almost every monster in this game have abilities and leader abilities. The abilities can range from damage limitation to changing inheritances on the field. With the right condition, abilities can be used at any time during the battle. Leader skills are passive bonuses for your team. These can range from restoring health in each round to stronger combo results. Only two monsters can have their Leader skills active: the Leader and the Helper. Defeating monsters in battle can produce eggs. Hatching these eggs will give you the same monster from which it came, which is the equivalent of this game for catching monsters. Defeating monsters can also result in chips. Chips are used to develop a monster. Developing monsters make them stronger and increase their maximum level cap. Note: Some monsters have several possible evolutions, some of which will completely change their abilities and Leader abilities.
