Restore from a google drive backup To successfully restore your Google Drive backup, you must use the same phone number and Google Account used to back up. To restore backup:Uninstall and reinstall WhatsApp.Open WhatsApp and confirm your number. When prompted, tap RESTORE to restore conversations and media from Google Drive.When the recovery process is complete, tap NEXT. Your conversations will appear when the initialization is complete. WhatsApp will start restoring media files once your conversations are restored. If you install WhatsApp without any previous backups from Google WhatsApp will be automatically restored from the local backup file. Restore from local backup If you want to use local backup, you'll need to transfer files to your new phone using File Explorer or SD Card.Note: Your phone will be stored for up to the last seven days worth of local backup files. Local backups will be automatically created every day at 2:00 a.m. and saved as a file on your phone. If your data is not stored in the /sdcard/WhatsApp/folder, you may see internal storage or the main repository folders. Restore a recent local backup If you want to restore a local backup that is not the latest, you will need to follow these steps:Download file manager program. In the File Manager app, go to sdcard/WhatsApp/Databases. If your data is not stored on the SD card, you can see the internal memory or the main storage instead of the sdcard. Rename the backup file that you want to restore from msgstore-YYYY-MM-DD.1.db.crypt12 to msgstore.db.crypt12. It's possible that a previous backup might be in a previous protocol, such as crypt9 or crypt10. Do not change the crypto extension number. When prompted, uninstall and reinstall WhatsApp.Tap RESTORE. Related Resources: How to back up Google DriveYou can't create or restore a Google Drive backup This is really a heart sinking moment if you find an important file deleted from your Android phone or tablet. Maybe this file was a reflection of happy moments, you can't relive it, or it was the document you needed at work. Losing a file is painful in any case. The reason you may have lost data on Android or iOS may be due to accidental deletion, lack of backup, rooting errors, memory card malfunction, and so on. So what if you understand you can not find an important file on your phone? Is there a way to get it back? Well, this is where android data recovery software comes to the picture! How does Android data recovery software work? The catch here is that when deleting a file, its data is not completely washed. Android notes that the space is empty and treats the file as missing. So, you can't see the file, and that space can be overwritten with new files. When the original files occupy that location, you can say that the file is lost. Since most Android phones do not have a recycle bin, you can not restore your data back through it. Finally, Android data recovery software can be used to rescue files. The software can scour the memory of the Android phone to search for pages that are marked 0 in order to find the recoverable data. In addition, the tool units are restored data back together, giving it a lifesaving format. In addition, it is advisable to use data recovery tools as soon as the file is deleted to give you a relatively high probability of data recovery. To recover data, three simple steps are usually taken: Successfully connecting your device to where recovery software is installedSelect the file type followed by the scanChosotho files you want and the following data is retrieved, there are several software that you can use to use data from Android devices. Tenorshare is considered one of the best Android data recovery software you can find. It claims that the success rate in the industry is compatible with more than 6000 devices including Samsung, Oppo, Xiaomi, Huawei and so on. This software has made it an effort to recover deleted photos and WhatsApp messages from your smartphone without root. Even if you do not have a backup, it can restore videos, voice, stickers, documents, etc. whatsapp. Regardless of the file type, Tenorshare can help you recover important contacts, treasured photos from the gallery, call records and other files in your internal memory. For this, you must definitely establish your device. Data recovery is a possible scenario, for example: Random deletionWater damageOS crashScreen is a brokenSystem root You can recover your data from internal memory as well as SD cards. You can also view the file before you restore it. As far as the security aspect is concerned, this tool is read-only and risk-free when there is no possibility of leaking or data loss. dr.fone dr.fone data recovery software claims to be the world's first brand that provides data recovery services for personal use. It has been leading the industry for more than eight years and supports more than 6,000 Android devices. You can even extract files from your broken Samsung smartphones. This software can play back a wide range of file types, including music, text messages, contacts, videos, photos, documents and WhatsApp messages for rooted phones. You can even view and filter files before scanning. Whether your device is rooted or not, and the tool can still get your data back. EaseUS Easy-to-use EaseUS software can effectively recover from recovery deleted files, such as a contact, text messages, videos, photos, documents, and sound. It supports more than 6000 Android devices including Samsung, LG, HTC, Sony, OnePlus, Asus and so on. The software can recover files from SD cards and internal memory to lose data through accidental damage, virus attack, device failure, rooting, improper device handling, SD card problems, and more. You just need to connect your device, search for lost files and restore the files you want in minutes. EaseUS takes care of data security and privacy without overwriting them. In addition, it offers free lifetime updates so you can enjoy your latest version as soon as it releases. In addition, if you encounter any difficulties, you can seek help free of charge for their technical support. To check the quality of recovery files in advance, you can view the data you're recovering and filter the data you want. You can also track changes in real time because the software sends recovery results messages to your device's notification center. PhoneRescue PhoneRescue is probably the only one that can recover deleted data and restore it directly to your smartphone. Whether you root your device or not, it can still find and recover deleted data. The software can recover various types of data from your phone, including WhatsApp data and attachments. With customized technology for every smartphone and tablet, PhoneRescue plays files at impressive speeds. In addition, the software can save your device when it is locked with a model, password, or fingerprint without losing data. FonePaw Using FonePaw, you can easily recover your deleted media and texts from your Android device. The scan speed of this tool is relatively faster while protecting the privacy of your data, including call logs, messages, photos, videos, documents, and WhatsApp media. It supports a wide range of file formats such as Excel, Word, PPT, HTML, PDF, RAR, ZIP, and more. Whether your data was lost due to accidental damage, OS failure, SD problems, ROM blinking and virus attack; the software can restore them all. More than 6000 Android devices support software from 2.3-9.0 versions. In addition, the software also provides features including data mining from broken Android phones along with backup and recovery. Disk Drill 7-Data Recovery, which is now disk drill, uses powerful technology to recover data from Android devices. It's easy to use and free that can get your data back after it is deleted accidentally or through failure. The types of files to be recovered by this software are documents, programs, music files, records, databases, e-mail messages, etc. To recover data, you need to connect your Android device to your computer by turning on Bulk Storage. Now open the software and search for lost files to recover them. However, if this mode isn't available on your device, plug it in advance. This software can not only get data from your Android smartphone, but also from Android tables and TV boxes. AirMore If you have deleted some useful data from your device system with updates, ROM flashing, rooting your device, or just accidentally, AirMore can help you recover files, such as never lost it. It offers a faster way to recover data, both from SD cards and from internal device memory. From internal storage, the software can recover data such as contacts, messages, photos, audio, videos, call logs, documents, and WhatsApp data. On the other hand, your device can play back data, such as photos, videos, audio, and documents from SD cards. In the event that your device is damaged, dropped in water, or has suffered a system failure, its data can be recovered. However, this feature applies only to Samsung Galaxy phone models, but more devices are expected to be supported soon. Wrapping up lost data is actually a painful experience, especially when you can't afford to lose them forever. But it happens, not to worry; the android data recovery software listed above can help you recover files. No matter what type of file you lost or an Android device you're using, data recovery software offers an efficient, secure and faster way to recover them. Back.
