When the second hand is 12 o'clock, pull out the crown and stop with the second click. Set your hand by rotating the crown. Move the minute hand four to five minutes ahead of the required setting, and then return to the setting. Push the crown back at the time signal and resume the timed time. Set the day of the week and the day of the week Day of the week and day .m between 8:00 p .m 4:00 p. The day of the week and the day of the week may not change to the next day. Pull out the crown on the first click. Set the day by rotating the crown clockwise. Set the day of the week by rotating the crown clockwise. Make sure the correct language (English or Spanish) is selected. Push the crown back to its normal position. [Module 4746] 30Crown (normal position) First click (day setting) This watch black resin band and stainless steel case with a crown, black dial and bezel inspired by the sea gives a classic look. Simple analog clock with 3 hands and date display for easy reading. 4.94/5 (31) Casio Merlin MDV 106 is an old-timer of diving watch lovers. It is a diver belonging to the Casio Duro 200 collection, cause its specifications greatly exceed the price and have a good reputation. With water resistance of 200 meters, the MDV 106 is the most underwater diving watch that can be found at a really affordable price. Merlin seals not only bring a unique look to the watch, but the brand itself is already a guarantee of strength and durability, but has been used by Casio in the most waterproof watches since the 1980s. This is a quartz watch that can easily pass through other high-end diving watches and actually remembers the look of some Seiko models. In this entry you will know the history and characteristics of Casio MDV 106. dv in depth Casio MDV 106 specification Casio model MDV 106 model 2013SourceJapan'sType crystal mineral characteristics visualization needle and box sim stainless steel material 92g Mecanism Japan Quartz motionSetle+20 sec/month earthquake resistant 200m / 20 ATMBezelSrever rotating bucket has moved to prevent water leakage through screw crown and back cover with other functions to calculate EnergyPila SR626 to calculate dive time. It first appeared in the 1980s and appeared in some of the toughest digital models. In fact, these digital Casio Merlins are considered precursors of today's G shock because they share several modules as well as features. The logo is similar to a swordfish, but actually represents a sailfish. In English, Merlin is a needle, which hints at the fish's characteristic nose. According to the company itself, Casio MerlinDecorated with this powerful creature, you can swim in the sea without interruption or rest. Casio also used other badges to distinguish his water watch, such as the diver's logo in the 1980s, and was also considered a ghastly watch by collectors. However, albeit the famous badge does not belong to a vintage watch, Casio is a watch with a large design and features of the MDV 106. Casio MDV-106 design and features, Casio Merlin MDV 106 is a large watch, Casio has a little short curve Duro Like 200 collections continue to use it in some of his current works, it's less noticeable, so even a small wrist will look better. Both the side of the steel case and the top of the crown are polished, so you can get a nice mirror finish, but the top and bottom have less reflective brush finish. The back is engraved with Casio Merlin's famous flying fish, serial number, model (in this case MDV 106), and 20ATM (200 meters) water resistance. Generally the dial has good visibility, as both hands and other marks are coated with light emission to shine at night, white on a black background. Something that is also used for the main bezel marker to know where the time limit is facing low light diving. The fish-shaped logo is present in the dial as well as the water resistance of the meter. Casio manufactures many waterproof watches, but most are WR 100 M, and the crown that does not wear the Marlin. It has two positions to change the time and date and is screwed into the box to prevent water from entering the interior. The BezelThe Casio Marlin MDV 106 has a 120-click bezel with notches on the edges, providing a grip that can be used with wet hands and gloves. Since it is a diving bezel, it is reversible in one direction and this means that it can be rotated only in one direction, which is important when used to calculate dive times. When divers spend a lot of time breathing compressed air, blood and tissue absorb excess nitrogen. This can create a bubble when you return to the surface. So-called decompression disease. That's why it's important to know the exact time to spend underwater breathing in a bottle. The blow to the bezel rotates it and can confuse the diver. If you move in a single direction, you can only see more time than is set. Turning other methods would be very dangerous because divers might think they have less time to submerge than they actually carry deeply. Acrylic glass is easier to polish in the case of scratching. It's not a luxurious glass, but the strap is a ribbed plastic resin cone groove near the dial that can't ask for more. with a low price watch, such as Casio Merlin MDV 106. It is not the most elegant option, but it is soft enough to be as comfortable and mostly waterproof as the rest of the watch. However, many people often wear NATO straps on this watch, they look better and look less hot in the summer. But keep in mind that as some vendors have specified, the measurement is 22 mm and not 20. For MDV 106, 2776 modules shown at the back may actually be a myota 2115. In, according to the manufacturer, it could be an equally reliable and accurate quartz movement with a precision of +20 seconds (less than 1 second) per month. The accuracy of quartz watches is excellent, but if you are looking for a diver watch that holds many meters immersion but can spend something worth a midrange diver, the short Casio Merlin MDV 106 won't let you down. Some watches can hold 200 meters for that price, and being a Casio brand is always a plus it endured the harshest situations without failure.
