Lennox 10f81 icomfort wifi thermostat blank screen

11-06-2018, 10:33 pm #1 Hi, I have the Lennox iComfort Wi-Fi Touch Screen Thermostat that's been working fine for years. This weekend, I was tired of the skin so I went to the settings and pressed Screen Saver. This is the only button and selection I've played. The screen turned black and no longer responds to the touches. It is still working internally, however somehow, since the oven continues to operate within the parameters of the program settings. By disconnecting it and reconnecting it so that it restarts, the screen lights up, ends the boot sequence, displays the temperature and the program in which it is connected, a few more seconds pass and then the screen goes black again. Pressing or holding on to different locations on the screen while this is happening doesn't seem to do anything. The worst is that the wi-fi function was turned off at the time, so I can't settle for changing settings using my phone. I can't find anything to get it out of screen save mode. It is not in lock mode because there is no image of a lock icon on the bar. I can't find any reset buttons on the housing of this unit, it may not exist. Is there any way I can respond to the touches again or something went very wrong with it? As a side question I was thinking, I noticed that there is a USB port in it. Is this just for the manufacturer's factory stuff, or do technicians carry a laptop that can work with the usb thermostat port? Thanks for anything that can make this wake up again! 11/07/2018, 12h04 #2 What is the exact model number? If I do a job in 30 minutes, it's because I spent 30 years learning how to do it in 30 minutes.
