Bloons impoppable guide

Now after playing THE BTDS Impabali mode for a while.... It happens to me to be a high-class strategy that when special agents can try to defeat the impabali mode without the help of many concerts ignored. By activating the level 4 expert building, most maps can be hit in impabali mode. I say 'max' because maps like Death Valley are very difficult on their own-all the available tower. When you are given only 4 to select the tower, the task becomes impossible pithetacally. Here's an example of an impabali mode map with a tower space strategy that works for 84 rounds, but the goal is short for 85 (with 5 zooming): so... What can be done? Out of cash at this point, okay? The trick here is to know the active potential of your tower. In this case, the ability to strike first of the monkey all needs to completely clean up the zooming. So, the last question is- Are we cash enough to buy the first strike capacity for five tower to meet five Zong? Nope... Just shame. Even with the Level 4 expert building that delivers 5% on tower purchase and upgrade, I'm still lighting up on cash. No concern, all this needs to be done- be immediate! Start round in normal speed mode, allow Zaomg to enter the map, then knock four zooming with the ability to strike first. Then, sell one of the four used 'tower', then upgrade the last tower, kill the ability of the first strike- what! xgamr.com/wp-content/uploads/2014/08/imp-strategy3.png inw, 300w, 250w, 150w size = (Maximum width: LB pixels) 100vv, Wimax /> So..... Easy, Right!???? Is there a better strategy?
