L115a3 sniper rifle bullet

Country of Origin UK Entering service 2007 Caliber .338 Lapua Magnum (8.6x70 mm) Weight 6.8 kg Length 1 300 mm Barrel ~ 686 mm Muzzle speed ~ 936 m / s Magazine capacity 5 rounds Effective shot range 1 500 - 1 700 m L115A3 is the BRITISH designation of a modified Arctic Warfare Magnum sniper rifle. In 1996, the Arctic War Magnum rifle, which was stung in .338 Lapua Magnum (8.6x70 mm) ammunition, was adopted by the British Armed Forces as the L115A1. It is used by the British Army, Royal Marines and Royal Air Force regiments. In 2007 improved L115A3 shipments began. The weapon has several improvements over the L115A1, such as different scopes, side folding buttstock with adjustable cheek pieces, different bipods and sound suppressors. A total of 580 L115A3 rifles were delivered to the British Armed Forces. This sniper rifle saw action during the wars in Iraq and Afghanistan. The L115A3 is an action bolt sniper rifle. This is the room for the powerful Lapua Magnum 338 cartridge. These cartridges are specifically designed for military snipers as long-range sniping ammunition. Its effective range is comparable to the .50 BMG cartridge (12.7x99 mm), although the Lapua Magnum .338 develops much less kinetic energy and penetration. In some cases laps of the .338 Lapua Magnum are reported to be able to penetrate the armored glass. The L115A3 rifle has an effective range of 1 500-1 700 meters. It can neutralize enemy snipers at standoff range. The L115A3 is one of the best sniper rifles in the world. In 2009 the second longest sniper assassination in history was made with an L115A3 rifle in Afghanistan. British Army sniper Craig Harrison killed two Taliban fighters in a range of 2,475 metres. At the time it was the longest sniper murder ever made. This weapon is fed from a magazine with a capacity of 5 rounds that can be removed. This sniper rifle has a folding buttstock. This feature reduces the length of the weapon. So the L115A3 is more comfortable to carry in a backpack than a rifle with solid buttstock. Another improvement over the L115A1 is the adjustable cheek cut. This allows the sniper to comfortably align his eyes with the scope. The L115A3 comes with a new customizable bipod. There is also a monopod. This allows snipers to support the rifle in a assigned position while finding the target. This weapon has Picatinny type rails and is equipped with 5-25x magnification day view. L115A3 can install sound suppressor. It reduces noise and noise markings, thus reducing the likelihood of detection and improving the survival of snipers. Don't be confused with the Accuracy of the International Arctic War. Sniper Rifle Type Sniper Rifle Accuracy International AWM British Armed Forces AWM .338, designated L115A3 (folding stock version). Rifle TypeSniperPlace of originUnited KingdomService historyIn service1996–presentUsed bySee UsersWarsAfghanistan WarIraq WarProduction historyManufacturerAccuracy InternationalProduced1996-2013VariantsAWM-F, L115A2, and L115A3 (English Army version)SpecificationsMuzzle velocity936 m/sEffective firing range1,100 m (1,203 yd) (.300 Winchester Magnum) 1,500–2,475 m (1,640–1,640–1 2,707 yd) (.338 Lapua Magnum)Maximum firing range2,475m+ (.338 Lapua Magnum)Feed system5-round detachable box magazineSightsDetachable aperture type iron sightsDay or night optics The Accuracy International AWM (Arctic Warfare Magnum or AI-Arctic Magnum) is a bolt action sniper rifle manufactured by Accuracy International designed for magnum magnum Accuracy International AWM is also unofficially known as AWSM (Arctic Warfare Super Magnum), which typically shows an AWM rifle disguised in a .338 Lapua Magnum. On September 9, 2012, Accuracy International announced that the LAPUA Magnum .338 AWM rifle was phased in and replaced by an AXMC Accuracy International sniper rifle. [1] Arctic Warfare Magnum System Main article: Accuracy International Arctic Warfare • The Accuracy International AWM sniper rifle design detail is a variant of the British Accuracy International Arctic Warfare (AW) rifle that is the basis of the sniper rifle family using the name Arctic Warfare. Thus the design details of the AWM variant are similar to those found in the basic AW rifle system. Compared to AW, awms have longer bolts to accommodate dimensionally larger magnum-length cartridges such as the .300 Winchester Magnum and .338 Lapua Magnum. Bolt heads, locking rings, and extractors and magazines were also revised to work with increased size and pressure operation of magnum rifle cartridges. Awm features a detachable single stack detachable box magazine that holds five rounds. The normal cartridges for this rifle, and which have been accepted by NATO for use in AWM rifles, are the .300 Winchester Magnum and .338 Lapua Magnum. Muzzle brakes are installed to reduce recoil, jump and flash and act as the basis for optional iron sights and suppressors. Typically, AWMs are equipped with Schmidt & Bender PM II 10×42/ MILITARY MK II 10×42 telescopic vision with 10× fixed strength magnification. However, Schmidt & The 3–12×50, 4–16×50 or 5–25×56 variable magnification can be used if the operator wants more flexibility to shoot at a wide range, or when a wide field of view is required. Accuracy International actively promotes Schmidt & The German-made Bender PM II/MILITARY MK II is a component of the sighting of their rifles, which is rare in gun manufacturers. The German and Russian armies preferred the telescopic landscapes made by Zeiss[2] over accuracy international preferences. AWM rifles are typically provided in metal transit boxes along with telescopic sights, mounts, butt spacing, bipods, spare magazines, intermits, cleaning and tool kits. Magnum chamberings .300 Winchester Magnum The .300 Winchester Magnum (7.62×67mm) cartridge is designed as a magnum hunting cartridge and offers a flatter trajectory and significant improvements in muzzle speed, wind resistance and supersonic range on top of smaller nato 7×51mm cartridges dimensionally. .300 Winchester Magnum space capability to get a fairly high muzzle speed, combined with its relative weight and length is very low, significantly increasing the probability of blow at a longer range and hence the effective range compared to NATO 7×62×51mm 7×62×51mm For precision shooting, the Gold Medal Match Federal Cartridge class is the most commonly used ammunition. [Citation needed] The AWM room for the .300 Winchester Magnum is equipped with a 660 mm (26 in) long, stainless steel barrel for optimal muzzle speed and nominal weight. The Winchester Magnum .300 barrel has a non-traditional right hand twist rate of 279.4 mm (1:11 in). .338 Lapua Magnum Dutch ISAF sniper team with .338 Lapua Magnum International Awm rifle accuracy. A British sniper (centre) carries his L115A3 Long Range Rifle with a suppressor attached, on a training mission along with a French sniper. The .338 Caliber LAPUA Magnum (8.6×70mm) is designed as a special long-range sniper rifle. The rifle is equipped with stainless steel, fluted, 686 mm (27.0 in) barrels, which research has found to be the best compromise between muzzle speed, weight, and length. The barrel has an unconventional 279 mm (1:11 in) right rotation rate, optimized to fire very low .338 caliber bullets up to 16.85 g (260 gr). When the AWM .338 Lapua Magnum developed military issue cartridges loaded with 16.2 g (250 gr) of very low bullets. Longer, heavier bullets such as the .338-calibre Sierra HPBT MatchKing 19.44 g (300 gr) and 21st century HPBT Scenar 19.44 grams (300 grains) .338 caliber HPBT Scenar can be used, but it takes a twist rate of 254 mm (1:10 in) to stabilize it under high air density conditions such as those found on arctic beaches. [3] The limitation of the AWM rifle was that the Lapua Magnum .338 cartridge loaded to the Commission Internationale Permanente pour l'Epreuve des Armes à Feu Portatives (C.I.P.) maximum allowed for an overall length of 93.50 mm (3,681 in) was not suitable in the magazine due to the lack of internal magazine length. This is because the AWM bolt action was originally developed for dimensionally smaller cartridges, and later modified for the Lapua .338 Magnum chamber. [4] The munitions manufacturer produced a .338 Lapua Magnum military issue cartridge containing 16.2 g (250 gr) of very low bullets (overall length of ≤ 91.44 mm (3,600 in)) fitting in the 91.5 mm (3.60 in) AWM magazine. As long as the magazine-fitting Lapua Magnum .338 cartridge is used, the AWM rifle can be used as a repeat rifle instead of a single-shot rifle. To overcome the long limitations of awm Lapua Magnum .338 ammunition, Accuracy International has developed the AX338 long-range rifle as the successor to the AWM. The AX338 bolt action is longer and wider than the AWM, and the internal magazine is on display, allowing the use of the 938 lapua Magnum .338 lapua cartridge loaded onto the C.I.P. (Permanent International Commission for Proof of Portable Firearms) maximum allowed throughout the entirety of 93.5 mm in). In addition, the AX338 has a twist rate of 238 mm (1:9,375 in) for stabilized the design of the longer and heavier .338 caliber projectile that became more common in the 21st century. [6] The types of ammunition available for the Magnum Lapua .338 are FMJ, hollow point, armour piercing (AP) and armour piercing incendiary (API). [Citation needed] Extreme sniper confirmed to kill Schmidt & Bender 5-25×56 PM II LP telescopic landscape, similar to the scene used by Harrison, and his adjustment controlIn November 2009, British Army Sniper Corporal of Horse (CoH) Craig Harrison, a member of the Household Cavalry, set a record for the longest sniper murder recorded, at the time, killing two Taliban machine gunners in a row south of Musa Qala in Helmand Province in Afghanistan at a range of 2,475 m (2,707 yd) took 10 shots to hit the target, using the L115A3 Long Range[7][8] In the report CoH Harrison mentioned environmental conditions were perfect for long-range shooting: no wind, mild weather, clear visibility. [9] In June 2017, a Canadian JTF2 sniper broke this record for confirmed killings at 3,450 m (3,773 yd) with the C15 Long Range Sniper Weapon. [10] Ballistics and the use of environments and equipment to achieve a goal solution Viewed at 5× zoomSeen at 25× zoomP4 stadiametric rangefinding reticle as used in Schmidt & Bender 5-25×56 telescopic view. The small red figure in the picture is the silhouette of a man standing in the range of 2,475 m (2,707 yd). According to JBM Ballistics,[11] using the drag coefficient (Cd) provided by Lapua, the L115A3 has an estimated supersonic range (sound speed = 340.3 m/s) of 1,375 m (1,504 yd) under International Standard Atmospheric conditions at sea level (air density ρ = 1,225 kg/m3) and 1,548 m (1,693 yd) at an altitude of 1,043 m (3,422 ft) or elevation (air density ρ = 1.1069 kg/m3) Musa Qala. It illustrates how differences in environmental conditions can significantly affect the flight of bullets. Schmidt Scope & The MILITARY MK II 5-25×56 mm bender used by Harrison on the L115A3 Long Range Rifle has a wind and elevation distance adjustment of 0.1 milliradian (miles), a double-turn elevation dome, and paralysed and illumination control. The view has a maximum vertical elevation range of 26 miles, and a 0.1-mile sight adjustment increase equals a 247.5 mm (9.74 in) impact shift point. To increase the maximum elevation range International Accuracy produces a mount for telescopic scenery with 13.1 miles (45 MOA) built in vertical cans designed for their Magnum Lapua 338 rifles fitted with telescopic views of 5-25×56. Even with a 13.1-mile can seat, the sighting system used is not dial in more than 39.1 milliradian vertical shot corrections, which is significantly less than Harrison required during his recording shots. [13] The external ballistic software program by JBM Ballistics predicts that High pressure Uk (over-pressure spin with pressure and speed significantly exceeding the standard maximum for cartridges) .338 Lapua Magnum Cartridges using 16.2 g (250 gr) Lapua LockBase B408 Cartridges fired at 936 m/s (250 gr) Lapua LockBase B408 rounds fired at 936 m/s (936 m/s) 3 Muzzle speed 071 ft/s) under International Standard Atmospheric conditions at an altitude of 1,043 m (3,422 ft) (ρ air density = 1,1069 kg/m3) and assume a flat fire scenario (a situation where shooting position and target are at the same altitude) and zero 100 m (109 yd) (the distance at which the rifle is seen) arrives at a distance of 2,475 m (2707 yd) after approximately 6.017 seconds of flight time at a speed of 251.8 m/s (826 ft/s) and have dropped 120.95 m (396.8 ft) or in 48.9 milliradian angle units (168 MOA) on their way. Harrison had to use a P4 reticle that offered a 0.5-mile hash mark holdover space in telescopic view of 5-25×56 to compensate for the lack of vertical goal correction and thus achieve the necessary goal solution. The long horizontal line at 5× zoom or magnification represents 49.1 milliradian (168.6 MOA) or slightly above the required vertical elevation. [14] The military adopted the Royal Marines' British Armed Forces with L115A1 rifles. The British Armed Forces adopted the .338 Lapua Magnum .338 Lapua Magnum as the L115A1 Long Range Rifle. British L115A1 rifle equipped with Schmidt & Bender 3-12×50 mm PM II/MILITARY MK II 3-12×50 mm 0.1 miles telescopic view. The L115A1 serves the Royal Marines, British Army and RAF Regiments in Afghanistan and Iraq. Long Range Rifle L115A3. In November 2007, the British Ministry of Defence (MOD) announced that their snipers in the Army, Royal Marines and RAF Regiment were to obtain new rifles. Accuracy International will supply 580 L115A3 Long Range Rifles with telescopic views during the day. The L115A3 is supplied as part of the wider Sniper System Improvement Program (SSIP), which also includes night scenes, spot coverage, laser rangefinders and tripods. [15] The L115A3 rifle was first deployed to Afghanistan in May 2008. [16] Some of the features of the upgraded L115A3 include: Schmidt & Bender 5-25×56 mm PM II LP/MILITARY MK II 5-25×56 0.1 miles paralysed, illuminated, two-turn telescopic landscape Emphasis to reduce flash and signature noise; Fold the stock to carry the backpack better; Adjustable cheek pieces for greater comfort and better eye alignment with butt spikes of telescopic sights (monopods) to aid stability during firing of the adjustable bipod, which differs from the original Bipod Accuracy International 5 round box magazine. MOD claims muzzle speed of 936 m/s (3,071 ft/s) for the L115A3 (variant next to AWM-F). [17] When the L115A3 Long Range Rifle was only 6 years into its life cycle, the British Ministry of Defence (MOD) acknowledged an increase in AX series rifles with respect to the use of special forces. The new AX series chassis system provides more flexibility to use (future) low light and optically aimed day light, laser pointers, and other accessories without the need for a custom-made installation interface kit. The right folding AX series chassis system is also more compact in folded configurations making it more portable and concealable, and features a pistol grip. At the request of MOD Accuracy International explores the possibility of updating the L115A3 Long Range Rifle to the

AX series chassis system, to produce rifles that are hybrids of awm and AX features. The AX upgrade was well received by MOD and UK snipers, and an update program was launched to produce the L115A4. The L115A4 could easily be mistaken for a new AX series rifle. Schmidt & The 5-25×56 mm PM II LP/MILITARY MKII 5-25×56 bender as well as suppressor, bipod and some other accessories from the reused L115A3 in the L115A4 resulted in significant cost savings. Along with rifle updates, the L115A4 includes new deployment cases, maintenance kits, and other accessories. The Dutch Armed Forces AWM-F commonly referred to as the Geweer Lange Afstand (GLA) (Long Range Rifle) questioned in the .338 Lapua Magnum has been introduced from 1996 by Dutch Army Commandotroepen Corps snipers and AWM is used by all Schutter Lange Afstand (SLA) (Long Range Snipers) of the Luchtmobiele 11th Brigade (air infantry), 13th Light Brigade (motorized infantry), 43rd Mechanical Brigade (mechanical infantry). In 2007, Dutch Marine Corps snipers also received sniper rifles. Dutch AWM-F rifle equipped with schmidt & Bender 10×42 PM II and 3-12×50 PM II telescopic sights. The rifle was designated as Accuracy, antipersoneel scherpschuttersgeweer.338 (Accuracy of anti-personnel sniper rifle .338) and the Dutch Military claimed a maximum effective range of 1,100 m (1,203 yd) for their AWM-F rifles and has used this rifle in Afghanistan with great success. [19] The German Armed Forces AWM-F or G22 in the Bundeswehr nomenclature with suppressants attached. Since 1998 the Bundeswehr AWM-F terrain in room .300 Winchester Magnum (7.62 × 67 mm in the Bundeswehr Nomenclature), with telescopic views of the SSG 3×12×56 made by the German company Zeiss, under the designation G22 (for Gewehr 22) or Scharfschützengewehr 22 (sniper rifle 22). Germany's G22 rifle has folding stock and a makeshift iron sight. For their G22 rifles, the Bundeswehr claims an effective range of 1,100 m (1,203 yd) and a muzzle speed of 885 m/s (2,904 ft/s). [21] Zeiss 3–12×56 SSG. German munitions manufacturer Metallwerk Elisenhütte Nassau (MEN) has specifically developed 7.62 × 67 mm ammunition for the G22. Carl Zeiss Optronics (previously labelled as Hensoldt) Hensoldt) The sights have a mil-dot reticle and scale that allows the operator to see dialled in altitude settings through the scope of an ocular rifle. The telescopic view of the Bundeswehr 3–12×56 SSG is somewhat different from the further developed SSG-P 3–12×56 telescopic landscape. The Bundeswehr telescopic landscape has no paralytic setting options and the range scale has a range of settings from 0 to 10 instead of 0 to 11 symbolizing the 11.2 milliradian elevation adjustment range shown in the Carl Zeiss optronics telescopic vision brochure currently 3-12×56 SSG-P. [23] The G22A1 has telescopic views of Schmidt & Bender 3-12×50 and Harris Engineering bipods and was used with German special forces. [24] The G22A2 is an improved variant featuring a new stock of AX series chassis, monopods and bipods, new double-chamber muzzle brakes and a telescopic view of the Steiner-Optical GmbH M5Xi 5-25×56 MTC LT LPF - TreMoR3s. [25] Accessory packs in addition to spare parts and maintenance parts include the Kestrel 5700 Elite Weather Meter with an integrated ballistic calculator. [26] In 2019, Accuracy International was awarded a contract to repair and upgrade all G22 and G22A1 rifles to G22A2 standards. [27] Royal Malaysian Police Action Unit (UTK) snipers of the Royal Malaysian Police Force (PGK) use AWM, which is likened to a .338 Lapua Magnum alongside the 7.62mm Accuracy International Arctic War. [28] Norwegian Special Forces Sniper Marinejegerkommandoen and Forsvarets Specialkommando are known to have used AWM, which is known to be a .300 Winchester Magnum or .338 Lapua Magnum,[29][30] although now they may have been replaced by the new Barrett MRAD. Russia Alpha Rifle Accuracy Group international AI War AI AW Police AI AW Magnum AI AW50 (.50 BMG) AI AX50 (.50 BMG) AI AS50 (Semi-auto .50 BMG) AW Australia50 Swedish F PSG 90 Snipers from the Counter-Terrorism Unit of the Russian Alpha Group use awm-F chambered at the .338 Lapua Magnum with Zeiss 3–12×56 SSG telescopic series of sights.
