When you first connect to a power supply, the hands-free kit must be combined with your phone. First, turn on Bluetooth on your mobile phone scanning for devices. Once detected, parrot CK3100 will appear on your phone. Select it. Enter the coupling code 1234 and confirm. You will see Coupling in progress appear in Parrot CK3100. Once the pairing is successfully completed, the Pairing Completed option will appear on the screen. Parrot CK3100 will then connect to your phone. This is a common problem faced by many iPhone users. First of all, make sure you have Bluetooth turned on. Go to Settings > Bluetooth. If you don't turn on or display a rotating tool, restart your device and try again. If this doesn't work, other headphones may be connected to your device. You may see the error message Cannot pair with Parrot CK3100. Resolve this issue by deleting the coupling with the other phones. Then try to reassign your iPhone. This should work. If not, there may be a hardware problem with your phone. To have a business? We can help you find the best professional mobile contract for you. Care? Contact us. Posted: 17:41 29 1# 10 ♫ ♫ ♫ times as this Id of kept my N85! Trying to match my Galaxy S to my Parrot CK3100, and when I enter the pairing code, 1234, says matching failed. Became abit of research (here), and something about the software version continues to be mentioned? How am I going to find out about this? My Parrot kit is a few years old now, but it still works fine, and the Milky Way is about a month old. Any help I appreciated! Cheers It's a common internet myth that you can just reset the CK3100 by holding down the red and green buttons (according to the CK3000 Evo). That doesn't work. Reasons for the need to reset: A. If you go to Settings / Device Pairs and you already have 5 phones on the list. This means you can't add a new phone until 1 or more are deleted. B. The kit behaves strangely with your phone - there may be several reasons for this. Since there is no special reset function you can achieve this in one of 3 ways: 1. Go to settings / Bluetooth / Device pairs and click on a phone you want to remove. Press the center button and scroll down to delete, then press the GREEN button to confirm the deletion. Repeat this procedure to remove all pairs of phones that are not required. 2. Re-expense CK3100 with the latest Parrot firmware (V5.00c). The CK3100 can either flash again with a USB update cable (which we provide) or you can reschedule it via a Bluetooth connection with the Parrot update tool. The reprogramming will remove all paired phones. 3. Remove power from the CK3100 by disconnecting the control box for 5 to 10 minutes (to allow capacitors to be fully discharged). This will not remove the paired phones, but will allow the CK3100 to start from a known situation. You still need to remove any pairs of phones manually. No other method will work after have deleted one or more phones, search from your phone in Bluetooth and select the CK3100 then pair with the handsfree kit. The PIN code is 1234. If the CK3100 refuses to remember the pairing please see this article: Is your parrot CK3100 installed correctly? Different software versions of Parrot CK3100 may work slightly differently and some will have problems connecting to newer phones, in which case you need to update the firmware to 5.00C or later. At JustCarKits we can update the firmware for you. Please see the following link: It is also possible to reactivate CK3100 directly via Bluetooth using the Parrot software update tool. Please also see this link if you have the memory full error JustCarKits can repair this error for a reasonable charge if you are in our installation area. Please call for an appointment. Alternatively... 1. Get the installation defect corrected by the original installer, since they incorrectly installed it to begin with. Or two. Locate ck3100 control box and wiring in the vehicle and correct the defect. Using a multimeter test the permanent 12V connection to the parrot control box power lead. Red lead should be permanent 12V and orange lead is only 12V when ignition is turned on. If power feeds are the wrong way around simply undo the tops of red and orange fusersholders and swoop on each other. Then you will have a red cable that goes to one side of the fuse and an orange that comes out on the other side. (if you lose security(s) it's a 20mm 5A slow blow type). Finally, unplug the 4-pin power plug from the Parrot CK3100 for about a minute to discharge the capacitors. Apply power once again and check that you can assign a phone and that when you turn off the ignition of the CK3100 shows Good Bye and closes after a few seconds. Please note that if you have not paired a phone with the CK3100 you can only see the message Goodbye for a very short time. CK3100 coupling code is 1234 If you ever had a car kit fitted, chances are that the engineer who placed it paired your phone into it for you and just worked without having to do anything to set it up. The only downside to this of course, is when you upgrade your phone you're left with a car kit looking for an old phone, and a new phone that can't find the car kit. If you're something like me, use manuals to On the back of a drawer, you should never see it again, so figuring out how to get your new phone to work with your parrot car kit could be quite a challenge. To help you, I've put a quick guide together on how to pair your phone with the parrot's latest car kits. So as long as you know how to search for Bluetooth devices on your phone you need to connect again in no time at all. Parrot MINIKIT+: 1. Start the car car make sure the car kit is in place. 2. Turn on Bluetooth on your phone and search for Bluetooth devices. 3. Select Parrot MINIKIT + from the list. 4. Type 0000 on your phone when prompted. 5. Parrot MINIKIT+ will sound an audible signal when connected to your phone. Phone.
