This versatile dual-fuel power generator gives you the power of gasoline plus the ability to keep longer-lasting propane handy for those unexpected outages. Runs on petrol or propane straight out of the box Noise level: 68dBA from 23 ft. Steel frame ensures durability Great for power outages and other emergencies Top Rated Choose a ship to state: Select All States (except CA) - from stock California - out of stock Membership is required to complete an in-club or curbside pickup purchase at Sam's Club. 1-48 of 60 Sort By Select Average rating: 5 out of 5 stars, based on 199.00 \$399.00 rating: 4.4167 out of 5 stars, based on 12 reviews (12) Taking personal responsibility for your electricity is a need for the 21st century. Sam's Club is here to help you control the power needed for your home and job site. From 15,000-watt portable generators to silent inverter generators: solar panels, wind turbines and the batteries needed to store that green energy, we have what you need at members-only prices. What different types of generators are there? Power Generators Classic power generators burn fuel to create a direct current of electricity (DC) for battery-powered battery keeping. When it comes to generators, the biggest questions are fuel and function. Most people think of a classic 7,500-watt electric start portable generator, like the Black Max with Honda engine. Generators like this use gasoline and are as suitable on a construction site or disaster cleanup operation as emergency power. However, with advances in propane and natural gas, there are also smaller 2,000-watt dual fuel portable generators. These developments also make permanent backup power from natural gas backup generators. An example of this is the 20,000 watt, Wi-Fi-enabled Generac, which is a wireless remote start standby generator with an automatic transfer switch. Inverter Generators Inverter generators burn fuel in DC and also convert it into alternating current (AC) to run tools and devices, probably via a standard 12V AC outlet outlet. These provide alternating current for normal devices or outdoor equipment. A great

tailgating option is the CARB-compliant Sportsman 1,000-watt portable inverter generator. For night camping, check out the Westinghouse super silent technology 2,200-watt inverter generator. What are the different types of alternative energy? Solar energy Using panels, collecting energy from the sun for powering lighting, direct use, or storing for activity at night. Orient it where it is sunniest for the longest part of the year. Wind turbines generate an electrical charge due to the rotation caused when the wind blows through This can collect energy during the day or at night, as long as the wind moves and is able to reach the turbine. Set these high for best results. Hydroelectricity Hydroelectricity is not generated at a household level because it requires harnessing a lot of fast-moving water to run large turbines. This is usually generated by large hydroelectric dams. But small hydroelectric water wheel kits can be used to engineer and manufactured as a project for homes adjacent to a stream or river. Tidal Tidal electricity is generated by the ebb and flow of water that flows in and out with incoming and receding tides. Geothermal geothermal electricity uses heat from deep in the earth to boil water and turn a steam turbine to generate electricity. What are the different types of battery chargers? Golf Cart Golf Cart chargers convert standard 12V AC exhaust currents into 48V DC power for charging golf cart batteries. Some of these models are open frame and some are covered. Power plants Power plants are versatile units that combine batteries, cables and inverters. They allow you to jump your own car battery, power hand tools or charge everyday electronics. They often have a digital display visualizing the remaining runtime on the power plant's battery. These stations generally have no generator and need to be connected to a generator or home power grid charged. What sizes of generators and power supplies can I choose? Fuel generators Get your gasoline, propane and natural gas generators in many sizes at Sam's Club, including the following: 2,000-watt Natural Gas Quiet Inverter Generators 3,500-Watt Propane Generators 5,000-Watt Gasoline Generator with Manual Start 7.7 500 Watt Dual Fuel Generators 12,000-Watt Portable Gasoline Generators 20,000 Watts Remote Activated Natural Gas Backup Generators Alternative Energy You Buy Alternative Energy Packages in Many Sizes at Sam's Club , including the following: 6-watt Solar panel kit 40-watt Solar panel kit 55-watt Solar panel kit 100-watt Solar panel kit 150-watt Solar panel kit 300-watt Solar panel kit 3.180-watt Solar panel array kit 5,300-watt Solar panel array kit 400 watt Wind generator kit What to consider when buying generators Do you experience frequent power outages? If you live somewhere prone to outages, a generator can make the difference between throwing away a refrigerator of rotten food or having ice cream after dinner. How much watts do I need to cover my devices? You may need to do some math adding up the wattage pulled by all the devices you want to run for how long. Or, for a backup, check your electricity bill to determine how much kWh or MWh you usually use in a month. Divide that by 30 days, and determine how much watts you want your generator and any batteries to be. That will tell you how long your backup will take your switched on. Should I buy a portable or home standby generator? Portable generators can be a huge advantage if you are routinely maxing out the length of an extension cord, or if you need to bring power tools to a one Site. Also, if you're in an area prone to frequent power outages, spikes or brownouts, a home standby generator can keep your lights on in a dark neighborhood. What should you take into account when buying alternative energy sources is your home suitable for solar panels? If you get direct sunlight on your roofs for long duration of the year, you could offset a lot of your utility costs with solar panels. How much money will you save going solar? The amount you save depends on your local utilities. If the energy costs in your area are high, and then solar panels can generate a great return on investment over 20 years. They also almost always increase your home value. What brands of generators and power supplies does Sam's Club sell? Generators Westinghouse Powermate Sportsman A-iPower Champion Power Equipment MasterPlug Black Max Generac Alternative Energy Grape Solar Nature Power Coleman Sunforce Battery Chargers Club Coleman Stanley Yamaha FAQ - Generators and Power Supplies What is the quietest generator? The Westinghouse superstill generators are an excellent short-lived generator. Does solar energy affect my property value? Solar energy generally increases the value of your home. It generally negatively affects the value if you're somewhere that uses a lot of solar energy, and you don't have it. How much does it cost to install solar panels? Depending on the size of your project, it can range from \$2,000 to \$20,000 to install solar panels. RECALL: More than 7,500 portable Westinghouse generators recalled by WAFB staff at fire risk | September 22, 2020 at 6:05 PM CDT - Updated September 22 at 6:55 PM BATON ROUGE, La. (WAFB) - The manufacturer of Westinghouse portable generators has recalled about 7,500 units that were sold at Sam's Club stores nationwide and other online major online retailers. Columbus, Ohio-based MWE Investments says the portable fuel generators can leak and pose a fire and fire hazard. The company has received 26 reports of fuel leaking from the fuel valve. No fires, injuries or property damage have been reported to MWE Investments. The items being recalled are the Westinghouse WGen5300DFv Dual Fuel Portable Generator and the Westinghouse iGen4500DF Dual Fuel Portable Generator with production dates from October 2019 through December 2019. Recalled Westinghouse WGen5300DFv Dual Fuel Portable Generator (Source: MWE Investments) Recalled Westinghouse iGen4500DF Dual Fuel Inverter Portable Generator (Source: MWE Investments) Affected portable generators have the following serial numbers, which can be found on the back of the unit panel: Location and format of the serial number on recalled Westinghouse Dual Fuel Portable Generator (Source: MWE Investments) Location and format of serial number on recalled Westinghouse iGen4500DF Dual Fuel Inverter Portable Generator (Source : MWE Investments) The De De was sold at Sam's Club nationwide and online on SamsClub.com. The iGen4500DF was sold online in amazon.com, homedepot.com, lowes.com, electricgeneratorsdirect.com, powerequipmentdirect.com, norwall.com and other online locations. The generators were sold from January 2020 to May 2020 for between \$450 and \$1,050, depending on the model. If you have purchased one of the affected generators, you should contact MWE Investments immediately to arrange a free repair. Click here for more information about the recall. Click here to report a typo. Posted on August 28, 2009 - 11:49 AM Just picked up a new generator at Sam's. \$600 for a 6750 running watt, 8450 surge watt, 13HP Honda engine. Seemed like a good deal and wanted to let you know. It's a black max, and I know, Coleman's out of the biz. There are people locally who need service here, but who needs service when you have the Sam's Club protection plan? (Return everything, at any time, full refund) Posted August 28, 2009 - 3:11PM I used a buddy of mines Black max last weekend. I ran (2) 1 1/2 HP blowers on. It was a smaller version. I believe 5250 watts. Started straight up, ran great and didn't use a ton of gas. Thought I'd throw that in for anyone interested in buying one. Posted on August 28, 2009 - 5:55 pm Honda engine? Nice and quiet then. Posted August 29, 2009 - 5:34 am Honda engine? Nice and quiet then. Yes, it's pretty quiet, not like a real Honda generator, but still very nice. And for \$600, you can't beat it. Posted on August 29, 2009 - 09:51 Virtually all those generators use a Honda Motor. I bought about 6 generators in my time and all had a Honda Motor. If you can't afford a 100% Honda Generator then why not have one that has Honda parts. I have a Honda Generator now and its very quiet. All the others I had with Honda Motors weren't too quiet. They all work. I really want to buy a generator to mount on the front of my trailer. I have to wait until I get an extra \$10,000. It's a lot for a generator, but if I put one on the front of my trailer that would open more doors. I have a truck and trailer I use the most that I can load a lot and a bunch of small generators. I just want to use a big one instead of a bunch of little ones. I want one with at least 100 amps. That would work for just about anything I do. I've rented a lot of generators in the last two years. It gets a little old after a while. Maybe in 2011 I'll buy one. I have a business plan until the end of 2011, so I'll see what happens. I always wanted to own a big 100 amp generator. Event master 100 amp wow.... How many units can you use with that baby?.... She's a big mother. Posted August 29, 2009 - 2:01pm I just want one that has at least 2 50 amp plugs. I want to plug a 50 amp wire on each one and use spinning boxes. Each spin box has 6 household plugs. 100 amps can go quite quickly. When I say 100 amps that's just the spin boxes. The generator has other plugs. Most I've used in the past always has more power than I needed, but that's what I want. Two 50amp plugs is what 8 blowers. That's not much. You another 4 connect directly to the generator. Being able to connect 10 blowers to a power unit would be cool. Most events I do I would use about 8 blowers. I only need to buy the biggest one I can power wise, but small enough to mount on the front of my trailer. If I buy one that will make me fun to have. Posted on August 29, 2009 - 10:05PM Nate, 6 digit item #? Posted on August 30, 2009 - 9:05 AM Nate, 6 digit item #? There was no 6 digit number, but there was a 5 digit... 39853 Posted on August 30, 2009 - 9:37 AM I couldn't find it by checking running watts or surge watts, nor per item #. have more info, so I can search? thx Posted August 30, 2009 - 3:13 am I couldn't find it by checking the walking watt or surge watts, nor by item #. have more info, so I can search? thxl have the feeling that this is one of those deals they have in certain stores. The Sams at my house didn't have it. I stopped by another in another city when I was there and they had this special deal, so I'm not sure if it's in any store. Store.
