This translation was made from an unofficial translation made by Sogun that some of you already know or have played, but IIDucci has reached out to update as much as possible, reviewing the texts and using better hacking ROM techniques to get the translation that this classic deserves. The patch in order to play GoldenEye 007 in Spanish can be downloaded from Uncle Victor's translations or from ROMhacking.net. To use it, you need a program compatible with xdelta format as Xdelta UI and serves both for European ROM (with GE-SPA-PAL file) and for American ROM (with GE-SPA-NTSC.xdelta), although to avoid problems it is recommended to fix a clean ROM that did not have the previous Patch Sogun to use.
