## Launcher hijack apk download

APP Information Download Version 4.0.3 (43) Apk Size1.52 MB App Developer Malware CheckUNKNOWN Installation on Android5.0 and up to App Package.com.baroniko.launcherhijack.apk MD5a05cdd6e65b81a11eae75e81274a8730 Rate5 Download Launcher Hijack V3 4.0.3 APK Download APK File (1.52 MB) Get from Google Play App Description Boot Hijack V3 is baroniko, launcherhijack, tools, launcher, hijacking, content rating is All (PEGI-3). This app is rated 5 out of 1 users who use this app. To learn more about the company/developer, visit the website that developed it. com.baroniko.launcherhijack.apk applications can be downloaded and installed on Android 5.0 devices and higher Android devices. The latest version of 4.0.3 Available for download. Download the app using your favorite browser, and click Install to install the app. Please note that we provide both basic and clean APK files and faster download speeds from apk mirror. This APK application has been downloaded 1008+ times in the store. You can also download com.baroniko.launcherhijack APK and run it with the popular Android Emulators. It allows you to change launchers in Kindle Fire, where by default this is not an option. It may work on other devices, but it hasn't been tested. HOME DESCRIPTION FROM XDA-DEVELOPERS: New version, V3 All newbackend from v2 to v2 backend as backup to increase reliability. It also avoids opening the app switch for an overall better experience. IMPORTANT: Remember to activate the Accessibility Service through Accessibility Settings -&gt; Accessibility -&gt; To locate the home button or nothing is going to happen. I've only tested this on one device so who knows how it will work on different versions of the operating system. Please let me know how it goes for you. Find the latest version here ( ) If you want to view my hasty and sloppy password, then feel free to look here ( ) Finally, please send any themes here ( ) If someone with some artistic talent wants to make a logo that will be greatly appreciated as the little android guy looks out of place in my app drawer. Troubleshooting It seems that some people have problems with achieving the tweak at work, so here are some general troubleshooting tips. Make sure you use an Amazon device running fire os, compatible with all versions from release (5.4 = latest) that home button detection is enabled: Settings -&gt; accessibility -&gt; To locate the home button press Make sure you can open your launcher directly, i.e. Using any launcher other than your selected launcher, and open you have selected launcher like any other application, this should open your selected launcher. CAVIAT: This does not work for google launcher now and any launcher that requires default; When you open a launcher like this you will be transferred to the system settings of the fire operating system, so that you can set your default launcher that is not possible, therefore, because this app was createdSelect you have selected your selected launcher in your Launcher HijackReboot phonetablet after all the previous stepsAfter clicking on the house initially wait 10 seconds and press home again. This occurs when the process of your selected launchers is killed in the background and can happen from time to time, especially after a reboot. There are many existing applications that already keep a selected application in memory, so try one of them if this is a recurring issue for you. If all else fails try using one of the following launchers with known compatibility: Nova Launcher, Evie, Arrow Launcher For Google Now &amp; WidgetsInsure Launcher Hijack works with another launcherInstall Google Search App (Available here) Some devices also require Google home so maybe better to install that too (Available here)Apparently install Google Now launcher (Available here) REBOOT , Open hijack launcher and select Google , if you have to uncheck Launchers only something has gone wrong, so give another restart a go and ensure that you have the conditions listed above installed. Google now should open when you press home, if it still does not work uninstall all the conditions and launcheritself, restart and try to follow the guide again. I had to do a reinstallation once to get it working, however I had reports of people reinstalling 4-5 times before finally getting the job. [Edit 240217] Fixed links, sorted grammar [Update 210317] Version 2.1 released, improves the speed and reliability of the application, so it should be a good update for everyone. Thanks to ParrotGeek once again on the edge on how to improve it. [Edit 110717] Sick of people complaining about the same issues so I added some troubleshooting steps and specific instructions for Google now. [Update 270717] Version 3 released Old blurb, removed: I'm here to announce my latest project, Launcher Hijack V2. This uses the same holding as Launcher Hijack V1, from parrotgeek1, but allows you to choose any launcher of your choice. If I find time I intend to apply further features, but for now this is all you get :P App ChangeLog App Screens LauncherHijackV403.apkName: 4ad1aa80-4f0b-11e9-83 cc4-108153fe6c98Name:403.apkName:5\_launcher\_hijack.apk Apk Scan Apk Results From TotalVirus Antivirus, com.baroniko.launcherhijack.apk was clean and Scan statistics:confirmed timeout:0|failure:0|harmless:0|malicious:0|suspicious:0|timeout:0|type not supported:10|undetected:62| Name:LauncherHijackV403.apkName:4ad1aa80-4f0b-11e9-83c4-108153fe6c98Name: 403.apkName:5\_launcher\_hijack.apk SHAK-1:38db75fe7c9c91d2c9eb31ac146e14f58eced62c SHA-256:d5346fb6d6d0a28b33e97448a4934a3093d6f7068a10cc43ba3b4b831313d5a1bd4 SSDEEP:24576:8WLnGs4 ijYDoRU Ldsddky9mtA36gaXwzbaRkib9fV99PA6kgvBri:8Wzgs8catsdjm6kXqGRjbpAPgvBW File Type:Android Magic:Zip Magic:Zip data File size:1590776 Uncompressed size:2724365 Contained files:429 Contained files of the type.MF-1, RSA-1, SF-1, dex:1, png:259, pro:1, xml:138, requires permissions after permissions for your Android device. android.permission.BIND\_ACCESSIBILITY\_SERVICE: Must be required by an android.accessibilityservice.AccessibilityService to ensure that only the system can connect to it. android.permission.INSTALL\_PACKAGES: Allows an app to install new or updated Android packages. Malicious applications can use this to add new applications with arbitrarily strong permissions.android.permission.RECEIVE\_BOOT\_COMPLETED: Allows an application to launch itself once the system has finished booting. This can make it take longer to start the phone and allow the application to slow down the overall phone than ever running.android.permission.SYSTEM\_ALERT\_WINDOW: It allows an application to show the system-alarm windows. Malicious applications can take over the entire phone screen. run at startup Allows the application to start itself as soon as the system starts. This can make it take longer to start the phone and allow the application to slow down the overall phone with always running. design over other applications Allows the application to design over other applications or parts of the user interface. They can affect your use of the interface in any application or change what you think you see in other applications. Sent by my XT1096 using XDA Labs Indeed – happy to move on, if and when appropriate. 24 February 2017, 10:47 pm | #6's exactly what I've been looking for. Thanks! 25 2017, 12:24 a.m. | #7 Senior Member More This is very nice. Thanks. I notice that about half the time when I press the home button from an app, I'm taken to the recent app screen instead of the home screen. Sometimes it takes a lot of presses to get to the home screen. Just a side effect or is it an error? Thanks. 25 February 2017, 05:49 AM | #8 Senior Member More Quote: Originally Posted by n3kf This is very nice. Thanks. I notice that about half the time when I step on the house from an app, I've been downloaded to the recent apps screen instead of the home screen. Sometimes it takes a lot of presses to get to the home screen. Just a side effect or is it an error? Thanks. It's probably a side effect. Sent by My Amazon Fire using XDA Labs February 26, 2017, 2:06 AM | #9 Excerpt: Originally Posted by n3kf This is very nice. Thanks. Sometimes it takes a lot of presses to get to the home screen. Just a side effect or is it an error? Thanks. I would call it an error, it was present in the first version and as someone in this thread mentioned turning cartoons away seems to make it more reliable, but still not 100% (it works 9 times out of 10 for me with no animation). I could possibly become more reliable by waiting longer before calling the launcher of choice, but it will slow down every button press so I'd rather not do so. 28 February 2017, 03:46 AM | #11 It's awesome to see V2 go up! I just hope that the recent bug can be smoothed out soon. Or is it possible to avoid this error if roots? I'll try it later today. 12 March 2017, 05:41 PM | #23 Junior Member Kent More Quote: Originally Posted by n3kf Excellent. I'll try it later today. Cool, let me know how it goes, it will be interesting to know if it works. 12 March 2017, 05:46 PM | #24 you will be surprised if this works with LH2, as it is waiting for a signal that the classic fire launcher has opened so if you remove it then no launcher will ever start. Give it a go and submit back, but make sure you have a way to reactivate the fire launcher first. As I know you can only delete the fire launcher on an ingraind device, but you can hide it which doesn't seem to make any difference to me. My bet is that you have your roots in which case you can only change the launcher if you are so sure that I can give a go to my device and assuming that everything works I update the original post to update update 12 March 2017, 05:53 | #25 Junior Member Kent More Quote: Originally Posted by BaronKiko You'd be surprised if this works with LH2, as it's waiting for a signal that the classic fire launcher has opened so if you remove it then no launcher will ever launch. a damaged APK on your device, however, with LH2 you lose the reference call to start your selected launcher so you don't do so if you use this mod (reference here). Depending on how you disabled the app you could possibly make a damaged version that still produces the required call to actually hide the default launcher, but I think the easiest alternative would be to use the draw over other api apps to blacken the screen out while it changes, add some nice fading and I think you could get quite a nice result. Unfortunately, I couldn't work out how to get the draw over other API applications to work on during my tests and can't put in enough time to work out why, but if anyone else knows how to get that work please pull the code and submit a pull request, I know how to do the schedule so all I need is a method that can blacken the screen. There isn't a custom ROM for 6th generation HD Fire devices yet. March 16, 2017, 6:00 PM #31 Senior Member More Quote: Originally Posted by PorygonZRocks It's probably a side effect. Sent from my Amazon Fire using XDA Labs No, disabling animation still doesn't fix the flicker of the recent menu. Could it be another @parrotgeek1? 21 March 2017, 06:05 a.m. | #38 Quote: Originally posted by PorygonZRocks I have no idea. Like I said, I'm just guessing. However, I guess there's not much difference. I think the only reason it's been flashing recently because of the transition drive, which is why disabling animation fixes. Sent from my Amazon Fire using XDA Labs I will always flash recently because it uses this menu as a convenient spot to open your custom launcher. It will stick when you call the open app routine before it's over in the application launcher that could have been fixed all along with an extra long delay, but no one wants to wait half a second after you click the home button. What you really fail to understand is why the second app launch/back is needed in the first place. I'd still like to add a black screen over the top while making the transition to make it feel professional, but when I last looked to get the API, which allows you to draw over other applications, to work it seemed like a pain. Regardless it's nice to have improved today, but enough of it for the day and back to zelda for me. It needs them because there is a security feature to prevent an app from opening another app less than 5 seconds after you press the home button. It is in AOSP to help prevent ransomware opening itself over and over again. Forcing them recently to open and close itself \* internally \* starts an activity, but this code path is not controlled by the timer, and stops the timer actually. If you don't have another recent/back call it will look strange because all the recent animation with the cards sliding will play on top of the new launcher and then disappear. I think this was corrected to 6.0. I think 2 calls recently caused a problem because 1 of them was accidentally ignored due to cpu load so that recent applications will remain open March 21, 2017, 6:55 a.m. | #40 Junior Member More Does this application run on reboot? Right now I use a damaged firelauncher.apk and I have to exec an ADB command every time I restart. If this app will to run as a service / at startup, it would be great (if you don't already). Edit: for those interested in the damaged launcher March 21, 2017, 09:17 AM | #41 Quote: Originally Posted by parrotgeek1 They need it because there is a security feature to prevent an application from opening another application less than 5 seconds after pressing the home button. I think this was corrected to 6.0. I think the 2 recent calls were causing a problem because 1 of them was accidentally ignored due to cpu load so recent applications will remain open if you get the second call that just flat out doesn't work for me, maybe they've changed the way it works since I owned the device. Here's to explaining. Excerpt: Originally Posted by RadiOstar Does this app run for reboot? Right now I use a damaged firelauncher.apk and I have to exec an ADB command every time I restart. If this app could run as a service/at startup, it would be great (if it doesn't already). Edit: for those interested in the corrupt launcher Definitely works to restart. I was using this system itself before I decided to apply the launcher option to Launcher Hijack. If you want to start using this over the ADB commands you need to repair your launcher as it requires calling from the fire launcher to start your custom boot program. So in short I hope to support your apk launcher, oh and remember to clean the cache and data (probably, can't remember enough) of the fire launcher after sideloaded your backup, just as it wont work until you do. If you didn't make a backup and really need it I can dig around and get my backup, however, I'll have to wait until I wake up as it's already 7:15 am xD Page 5 March 28, 2017, 4:26 pm | #51 Senior Member The Internets More Works Perfect for My Fire HD 8 6th Generation with Fire OS 5.3.3.0. When I press the home button there are often other displayed (app switcher or foster home), but this is not a big deal. I'm a little disappointed that widgets don't seem to work - I've tried with a few launchers, but throwing a widget on a home screen doesn't do anything and sends me to the Kindle's setup menu. Widgets only work with certain launchers (e.g.: Nova) and the only if 1) device has roots; and 2) Launcher made a system app. Restriction imposed by FireOS. 6 April 2017, 10:02 pm | #55 Excerpt: Originally Posted by Brsuperboy9 Arrow Arrow it doesn't work working fine. Slightly glitchy, but you know, better than FireOS. 17 April 2017, 09:49 AM | #57 More works on Fire OS 5.3.3.0, bugged once may have been because of the mem. Im testing the retention continued in mem for nova. Known glitches with the home button, like other fire launcher shows for a second. Or a recent record. But it's worth it for a classic and/or customizable ui. Thx so much April 18, 2017, 4:41 am | #58 First off, I really want to thank both the original dev as well as the guy who works on v2 for putting it out there - it really allows me to use this tablet in a more productive way. Also just wanted to add that Google Now launcher works great. 19 April 2017, 05:27 pm | #59 Junior State More Quote: Originally Posted by Kwanbis Works Perfect for My Fire HD 8 6th Gen with Fire OS 5.3.3.0. Thanks! Hi everyone, I just downloaded the apex launcher and then I installed this apk on my Amazon Fire HD 8 (running Fire OS 5.3.3.0, Build Date March 3, 2017) and it works 99.9% perfect. The single flaw occurs at startup completion because I end up on the Amazon Recent Screen (instead of the Apex Home screen); However, a single tap of the Home Screen Button takes me directly to the Apex Home screen and all is well after that so far. With that said, does anyone have any ideas how to fix this single issue? FYI, I also tried the Beta version, but it doesn't seem to work as well as this version. In any case, this is a guard, but it would be nice if I could get it to 100%. Kudos for the developer! Thanks, gus April 19, 2017, 6:13 PM #60 Senior Member More Quote: Originally Posted by gustaviosio Hi everyone, I just downloaded the Apex launcher and then installed this apk on my Amazon Fire HD 8 (runs Fire OS 5.3.3.0, Build Date March 3, 2017) and works 99.9% perfect. April 19, 2017, 8:45 PM | #61 Junior Member More Quote: Originally posted by Davey126 Search thread for animation for a mitigation that can reduce but probably won't eliminate behavior. Hi Davey126, Thanks for your suggestion, but I have one at a time idea that my theme has something to do that pop up (I don't have ads without a version). So when you turn on the power here is what happens at the end of my boot sequence: I see an empty windows open for a while and it looks like the wallpaper from the Apex launcher. Then the window closes and I see the Amazon homepage for a while. Then the Amazon ads pop up so I drag to clean it up and it leads me to the recent Amazon page. Then I press the home screen button to open the Apex launcher. Same result as Go Launcher Z. So if I have to press a button, instead of pressing the home button from the recent screen, I'll just place an Apex Launcher button on the Amazon home screen and get the same result. Regarding, gus Page 6 17 April 2020, 03:54 pm | #621 Junior State Toronto More Quote: Originally Posted by RedPanda123 Just got a new Fire HD8 8th Generation OS 6.3.0.0, installed the launch hijack clone that a user kindly shared on this thread. When I try to activate the Accessibility /detect home button, it's just a blank screen. My big fire HD8 7th Gen, the clone hijack launcher works just fine. Did Amazon block the ability to enable home button detection press? And I just bought a Fire 8 and had this blank screen issue with Detect Home (Hijack), but then I let it be updated to Firefox 6.3.1.5 and that control was activated. Now it runs Nova Launcher (via the also installed Google Play Store) without a theme - except for the known 5 seconds lag on the Home button. I would have returned fire if I couldn't get to a real launcher. Its really a decent little device for what I need to do now, but amazon's product-heavy Fire Launcher would drive me nuts. 22 April 2020, 03:07 pm | #622 Senior Member More If anyone can help me see where I'm going wrong I'd really appreciate it. I have a FireTV 4K 1st generation running FireOS 5.2.7.3 I have successfully managed to ADB in FireTV over ethernet and installed both: • Leanback Launcher • Launcher Hijack 4 I ran both of these commands over ADB. adb shell settings put safe enabled\_accessibility\_services com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ adb shell settings put safe accessibility\_enabled 1 Both perform fine without errors, however Launcher Hijack does not start on its own on FireTV. When I start it I still get an Accessibility Service error Disabled I have tried to open and disable screen magnifier, restart and tried again but still get same error. Do I miss something? 4 May 2020, 02:01 p.m. | #623 Junior State Silesia More Quote: Originally Posted by keenan316 If anyone can help me see where I'm going wrong I would really appreciate it. Same here. Did you find a solution? Hi! 31 May 2020, 02:35 a.m. | #624 More got this to work in Fire HD 8 8th Gen, using the following commands ADB and the repackaged apk Code: adb shell settings get secure enabled\_accessibility\_services Copy the output from the above command and paste it into the following Code command: adb shell settings put secure enabled\_accessibility\_services (enabled\_accessibility\_services PASTE\_HERE):com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ will also have to run code: adb shell pm grant com.baronkiko.launcherhijack android.permission.SYSTEM\_ALERT\_WINDOW ----- Post added at 12:57 a.m. ----- Previous post was at 12:56 a.m. ----- got this to work on Fire HD 8 8th Generation using the following ADB commands and the repackaged apk Code: adb shell settings get secure enabled\_accessibility\_services Copy the output from the above command and paste it into the code below : adb shell settings put safe enabled\_accessibility\_services (PASTE\_HERE):com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ should also run Code: adb shell pm grant com.baronkiko.launcherhijack android.permission.SYSTEM\_ALERT\_WINDOW ----- Post added at 01:3 5 a.m. ----- Previous post was at 12:57 am ----- Quote: Originally posted by mojavaid36 got this to work on Fire HD 8 8th Gen, using the following ADB commands and the repackaged apk Code: adb shell settings get secure enabled\_accessibility\_services (PASTE\_HERE):com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ should also run Code: adb shell pm grant com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ should also run Code: adb shell pm grant com.baronkiko.launcherhijack android.permission.SYSTEM\_ALERT\_WINDOW ----- Post was added at 12:57 am ----- Previous post was at 12:56 am ----- got this to work on fire HD 8 8th Gen , using the following ADB commands and the repackaged apk Code : adb shell settings get enabled\_accessibility\_services Copy the exit from the above command and paste it into the following Code command: adb shell settings put secure enabled\_accessibility\_services (PASTE\_HERE):com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ should also run Code: adb shell pm grant com.baronkiko.launcherhijack/com.baronkiko.launcherhijack.AccServ should also run Code: adb shell pm grant com.baronkiko.launcherhijack android.permission.SYSTEM\_ALERT\_WINDOW Required by the application And the net result is no change, yet a long, annoying pause on the home screen fire launcher before switching to Nova Launcher. 4 June 2020, 05:55 p.m. | #626 More Amazon Toolkit has the solution of downgrading fire launcher and doing some tinkering, but unfortunately, it gets reset if you turn off your tablet. Unless someone does some active research, I guess we're stuck with the five-second pause for good now. Sent by my KFDOWI using Tapatalk July 8, 2020, 11:24 am | #627 More I decided to bite the bullet and have gone to root my Kindle Fire HD8 (Douglas). I got a few things wrong and ended up have to take the tablet apart to apply the trick of short-circuiting from two pin connections. However, I successfully got TWRP installed and tried both Lineage-12.1 and SlimLP. While both were quite fast and lively at first, they regularly locked up and had to wait for the system to become responsive again. After a week of trying both of the custom roms, I decided to go back to stock and just live with the awesome Fire Launcher. Unfortunately, the scenario for restoring my tablet to stock did not work. With a little research I discovered that stock image files straight from Amazon are flashable to TWRP! So I installed Amazon stock, Magisk (to give me full root) and Titanium Backup. Once it was all up and running, I used Titanium Backup to freeze the launcher fireos (called Homepages). The home pages need to take on a lot of system resources because now I'm on Nova Launcher, the tablet looks faster and more responsive. The only drawback to all this seems to be that battery life has been reduced. 18 August 2020, 12:09 a.m. | #628 More Can anyone explain some of the settings to me and when it is advisable to use them? Boot Open Detection, Broadcast Receiver Detection, Overlay Detection have been stunned. 31 August 2020, 03:07 p.m. | #629 Junior State Toronto More Fire OS 7 on Fire 8 (8th generation) Tablet w/Launcher Hijack Amazon has recently dropped their OS 7 (Android 9 - Pie, w/tweaks them) on their older tablets and, tempting fate, I went for it yesterday. Fear of losing access to the Hijack file by posting #395 - Freaky(Like) a real concern - less so Google because there are FireOS 7-friendly files available - but it's upgrade seemed to go away ok. This update had to be done manually (Device system updates do not automatically find it - so updates found on the Amazon Fire Tablet Help site - a list of operating systems and valid - downloaded, moved to the main fire storage, then run from the System Update. Their launcher really makes an effort to be the default (and hides Launcher Hijack when it does), but I think I've (mostly) returned to functionality here. Using Nova Launcher here and - FWIW - Google files as previously installed in April all seem to work, too. Early days still as to the improvements that appear in their pie version, but so grateful for Launcher Hijack - and you don't have to do the whole connect to a computer to make tweaks thing, here. 21 October 2020, 05:21 a.m. | #630 More Fire 10 9th does not work can not choose the Nova Launcher within Hijack app, the option is gray, can not click ok to confirm ... Confirm...
