If you can't find the pieces you're looking for or have a brand we don't advertise, click on the link below to fill out the parts request form: PART OF THE REQUEST PAGE IS FREE SHIPPING ON ALL PARTS OF ORDERS OVER \$75!! - Start of discussion • #1 • On March 1, 2014 I am 90% sure that I am going to buy SR125 in the next few weeks. Before committing to buying this bike I wonder how much quality after market parts are available for this bike. When I go to websites that sell after-market parts, they say some parts will filter the SSR, and some parts fit CFR and TTR'S. I saw on some sites that SSR was almost the same in many ways as Yamaha TTR. I think I ask that Japanese bike models are just like SR125s that have interchangeable parts. I tried to find a site that just had SSR high end parts. I found a few, but there the choice was a little limited. So I wondered if I'm new that the SR125 was a clone I could find more ejaculation for my new bike. Appreciate any help I can get. - CRF50. Case plastic seat Pegmounts whole engines high bars (type MX) Shifter Kicker clutch lever hand clutch cables high bar throttle and throttle cables - Crf50 parts will work. Check Tboltusa.com website is the best in the business and very knowledgeable. It sells SSR with free shipping. I have an SSR 125 sitting in my garage with lots of after-market parts on it. The first upgrades should consist of a chain, carbohydrates, tires and levers. If you weigh more than 110 pounds, then your forks also need work. You can make these inexpensive bikes nice, but they take a lot of work and parts. If you don't want to do a ton of upgrades then I'll have to recommend against it, and a better built bike such as the Pitster Pro X5. - Discussion Starter • #4 • March 1, 2014 (Edited) Well I probably weigh about 250 pounds. Pitster Pro looks very beautiful. If I was going to pay another \$1,000 more, I think I would just go buy a Honda CRF and fund it. I wondered if I got SR125 I would just put after-sell parts on it as they break down. UP score bike as needed doesn't bother me, since I can get the bike shipped to my house for \$630. - I probably weigh about 250 pounds. Pitster Pro looks very beautiful. But if I was going to pay another \$1,000 more, I think I'd just go buy a Honda CRF and fund it. I wondered if I got SR125 I would just put after-sell parts on it as they break down. UP score bike as needed doesn't bother me, since I can get the bike shipped to my house for \$630. Start with a bike that fits your needs [h=1]Pit Bikes/[h]=2]So are you looking for a pit bike? [h] No, no, no, no, if you're not sure where to start searching, keep in mind the following information when viewing this section. If you're looking for a bike for yourself and you've ever owned a full-size bike before, you're more likely to want to start in the Race Ready Pit Bike section. These are our high-quality bikes that can really take a beating. We're also a specially crafted category for bikes that are very sturdy and can hit a tight trail or even practice tracks Track and Trail Bikes If you're looking for something to tear around the backyard and mob surroundings, or if you're looking for a bike for an inexperienced rider, or someone just getting started, you can look around the Play Bike area. The bikes in this section are also quality bikes, but they are usually performance-oriented, and not the bikes we offer run from 40ft doubling. - Start of discussion • #6 • March 1, 2014 Bike will be for me. It will be used mainly on pavement and gravel roads. I'm a child of his. There are seven miles of roads in my unit that I will drive to. I bought a scooter a while ago to ride. I almost ruined a few times, so I sold it. I need something that I can put my feet next to me more easily. It also takes something that occupies rougher ground better. When the tyre handles were down, I'll put more street tyre on it. I grew up driving mud and street bikes. I thought about min bikes, but they cost too much for what I get, so I think pit bike. - Pitster pro all the way. In my opinion, you will be dissatisfied with the SSR 125 Sr. - Starting a discussion • #8 • March 1, 2014 is sr125tr, which is a much better bike. Would fewer things need to be simulated on it? Is it worth the extra money? - I ride the WMX 125. supports me no problem for my backyard riding/stunting/mini track (no jumps like o yet) im 250lbs. I run shares fork out of fastace shock valued at 200 pounds (want to upgrade but can't afford haha) as long as you ride your bike with within it it will be fine. 1.8 MB Views: 2385 - Discussion Starter • #11 • March 1, 2014 Your bike looks like an SSR-type bike. Thank for your introduction. I really want to stay under \$700 - The SSR TR has a slightly better suspension. With £250 a dude on a small bike suspension is there without it you have nothing worth driving. SSR-SR will be at the bottom with you just sitting on it. The SSR-TR has better forks (upside down), bars, tires and upgraded plastics. I have Strip the TR model, the SR model in my garage belongs to my buddy. After he drove twice he told me he feels like its going to be tethered underneath and he weighs only 160, so he put at least \$600 into it and now its fine, but he still wants to sell it and get a Pitster Pro LXR after riding the mine. There are many options out there keep looking around and asking questions just remember how and everything else you get what you pay for. - Discussion Starter • #13 • March 2, 2014 Thank you very much for all your information - I drive an SSR125 and I weigh about 120lbs, it's all from a good bike, just needs some upgrades like levers, perch, forks, bumps, footpigs, kicker and Shifter. I've been driving the mine for about a week now on and off the trails, and the kicker starts leaning down, making it harder to hit. The clutch lever and perk are a bit of a problem. The clutch cable shakes the perk because the angle of the perk causes the frey cable. The fork must surely be upgraded as we will as a backstroke. They tend to bottom out on jumps and drops. We also provide the number of reviews and other people who are not eligible to stay at this most erring. Above all these there are just some of the thoughts and benefits of the rider, but don't let those who keep you from getting a bike. My friend has crf50 with BBR88cc big holes and a lot more upgrades and I smoke his hills and should ride with my bike. - You smoke it, 88cc VS. 125cc. Hmm wonders why this is the case. LOL - Haah yah but his bike has a lot more HP enlargement parts and I think it could be a 106cc BBR Kit actually 198 KB Views: 382 382
