Tin audio t3 india

Tin HiFi is located in Dongguan, Guangdong Province, and was founded in 2010 with an independent production facility and R&D team. For many years they have been engaged in OEM/ODM operations at home and abroad. In 2017, they officially launched their own brand which in English is TINHIFI, and in Chinese is Everyday. T1 and T2 products were released in October, and they have been well received by audiophiles at home and abroad. Their dream is to let the world's small partners enjoy high-quality sound. Let high-quality music no longer be a luxury, so everyone can listen to every day. Loading... Tin Audio is such an unfortunate name for a brand. No? I mean, the word Tin evokes all kinds of negative emotions in the audiophile world. That said, Tin Audio as a brand has made some of the most awesome-sounding mid-range IEMs in recent times. I reviewed the incredible T2 last year and after using his successor – T3 – I am convinced that it is definitely a marked improvement. And you know what, I didn't think Tin Audio could actually do it. Let's get the review up and running. Tin Audio T3: design, fit, and specifications box packaging is, in typical Tin Audio mode, elegant and attractive. The blue bookcase-like cover has a transparent cutout to show off the individual headphone devices in all their glory. That's the hook. Inside you get the detachable MMCX cable, which has been thickened with a 5N eight-core oxygen-free copper-plated silver cable. It's extremely sturdy and looks pretty flashy too. This cable has a Y-split from where the individual right and left channel cables get separated. The cable also ends at a straight jack that is extremely stable built. It has a marble-like design on the insert, which looks strange considering it veers away from the entire golden design aesthetic of IEMs. By the way, there is no microphone because T3 is a real audiophile pair of IEMs. The earphones themselves are made of metal making them extremely sturdy. You have to loop the thread over your ears and I would have liked a softer outer casing to make it feel more comfortable. However, even the default thread is not uncomfortable or anything. I could wear for hours on end without much discomfort. I preferred to use foam tips for a better sealing and improved base response. However, you can use silicon tips, which come in three different sizes. Finding the right fit for the ears should not be a problem, unlike foam tips. Inside the headphones you have a 10mm dynamic woofer and a 6mm tweeter, in a dual driver setup. And, these headphones work in a frequency range of 12-40000Hz. Tin Audio T3: Sound Quality When it comes to improving the sound signature from a previous generation product, Tin Audio delivers and how. With the new T3 audio profile, you can be sure that Tin Audio is listening to consumer feedback. It is had a fairly neutral sound signature over the frequency spectrum but the treble became a bit too sibilant and the bass lacked punch. Tin Audio has fixed that in T3. T3's signature is one that is analytical, bright and extremely detailed. Tin Audio is clearly going for clarity here. The silence lacks all the noise artifacts and all you get is a crystal clear sound space for you to enjoy your music. The image and stereo separation, as a result of this clean sound, is extremely precise and accurate. The only problem I had with T3 is sound-staging is almost non-existent. There are also times when the treble feels slightly sibilant (the S sounds are more pronounced) but it's not as bad as T2. The bass is tighter now and I had a blast listening to DMVU's latest single Trunk. The distribution of each section and sonic high that you get when the pace drops can't really be explained by words. You can't help but groove to the odd arrangement of sounds that hit a crescendo at multiple points in the song. But yes, you don't get much quantity in the bass that's on something like Soundsly Appaisant. Mids are clean too with a small peak in the upper midrange region. When this is mixed with the treble peak, the area of the frequency curve it becomes annoying to listen to. Audiophiles will possibly like this audio signature. I really did. T3's sound signature is suited for any genre of music really. I absolutely enjoyed listening to Dave Grohl's signature throaty growl in The Walk of the Foo Fighter and the extra sweetness of Minmini's vocals in Chinna Chinna Aasai from Roja. Overall, T3 is the best sounding Tin Audio product to date. Are you going to buy The Tin Audio T3? The Tin Audio T3, at the time of publication of this review, is not available on headphonezone.in because it is in stock. It's pretty unfortunate really. But you can pick one up Amazon or one of the Chinese e-commerce sites like Alibaba or Gearbest. Or, you can also get it from Linsoul. You can get a good deal on one for around \$60, which roughly translates to around Rs 4,200. This makes it an incredible deal and a complete value for money option. Especially, given the excellent sound signature that you get with it. The price of 1More Triple Driver has also dropped to around Rs 7,000 now making it a great option if you want something that sounds more musical. Then there's the HiFiman RE-400 that makes for another great pair of analytical IEMs. Then there are a smattering of KZ options like ZS6, AS06, ZS10, AS10, BA10.the list is virtually endless. They all sound great too but my only concern is that you don't get the premium feel and quality that you get with the Tin Audio T3. Overall, T3 definitely makes it to my list of the 3 IEMs around the Rs 5000 mark and there are no two ways about it.
