Nzxt phantom 410 case manual

Our compatibility list helps you quickly determine which PC cases offer sufficient clearance for which Noctua processor coolers. The compatibility indication is based on the height of the coolers (including fans) and the maximum cpu cooler height specification provided by the chassis manufacturer. Caution: Please note that fans of some tower coolers (especially larger models with 140 mm fans, such as NH-D15 or NH-U14S TR4-SP3) can protrude RAM sockets and that this can cause compatibility problems if ram modules are used taller than 32 mm. While fans can be moved to the top to increase RAM clearance, this will increase the overall height of the cooler and therefore require additional clearance inside the chassis. As a rule of thumb, if the fan overhangs the RAM, the maximum cpu cooler height specification in case must be at least fan size plus RAM height minus 7mm (accounted for socket and processor height). For example, if the cooler uses a 140mm fan that bends RAM and uses 46 mm high RAM modules, the maximum CPU cooler height should be at least 179 mm (140+46-7=179). For more information and instructions on how to move the fan for each cooler model, click the height specification reference. Disclaimer: We create and update compatibility lists very carefully. However, in the case of manufacturers sometimes modifying parts or parts of their products without prior notice or expressly indicated by review.
