Anne Maple Ridge is a very popular digital camera designed by Kodak EasyShare Camera for consumers looking for a cheap but effective way to take digital photos. If you are going to buy a Kodak EasyShare camera or already own one, learning to use the camera is easy and only takes a few minutes. Use scene settings like beach, portrait, night, sand/snow, etc. with your Kodak EasyShare camera to take amazing photos under different conditions. Depending on the Kodak EasyShare model, press the menu button from the wheel above the camera or on the back of the camera to access the scene settings. Use automatic mode when possible. Simply put, each EasyShare camera is in fully automatic mode by default, which automatically determines whether you need to use flash and the ISO settings you need to use. The green camera icon usually specifies automatic mode. The camera automatically focuses on the object. To use autofocus, press the shutter button on the camera halfway. When the subject is in focus, press the shutter button to take a picture. Adjust the camera ISO to suit different conditions. The ISO of the camera determines how sensitive the camera is to light. You can adjust the ISO yourself by pressing the button on the back of the camera. Typically, use a lower ISO in brighter situations where the sensor is less sensitive to light, and a higher ISO for more sensitive conditions. Upload photos from your camera to your computer using the included USB cable. Each Kodak EasyShare camera comes with a USB cable that you can use to connect the camera to your computer and some basic photo editing software (found on the CD in the box). Kodak also makes docks for its digital cameras that you can always leave connected to the computer. With the dock, you just put the camera in the dock and the photos will be uploaded to your computer. The dock also has the advantage of charging the camera battery while the photos are uploaded. Android phones were available in many European markets for under \$525. When Kodak unveiled the Ektra, it did not provide details of the smartphones available in the United States, but many believed that if the device sold well in Europe, it would eventually arrive elsewhere. A month behind the deadline, Kodak Ektra will eventually arrive in the U.S., where customers can pick this up for as little as \$399. Kodak announced that Ektra could be purchased in the US for \$549 in January, but has since set a much lower price to compete with other mid-range Android phones. The Ektra is a camera-centric smartphone equipped with a 21 megapixel photo snapper with PDAF (phase detection autofocus), OIS (optical image stabilization) and dual LED flash. The phone has a powerful 2.3GHz decacore Helio X20 processor with 3GB RAM and 32GB of internal memory. It is only compatible with GSM networks and cannot be used with U.S. carriers such as Sprint or Verizon. Another drawback could be the fact that it is shipping along with Android 6.0 Marshmallow on board.
