## Hello moto ringtone

A ringtone can be any type of audio, from parts of songs to your own voice recordings. If you can make catchy clips you can build a profitable business. The process is simple and involves few expenses, depending on the options you choose. Research tones in the market to understand current trends. The information you collect will guide you in creating clips that people are likely to buy. You can check trending ringtones online on websites like Billboard, iTunes and Myxer. You can create a ringtone with one of the many audio editing programs available on the Internet, free of charge or for a fee. Some can be downloaded to your computer, while others are functional only on the provider's website. The program's instructions are usually simple for easy use. The most popular programs include Audacity, AVS Ringtone Maker and the audio file you want to modify must be saved on your computer. Open it with the editing program and use the tools to select the beginning and end of the part of the audio you want for a ringtone. Ringtones are usually 30 seconds long or less long and include the most catchy section of the audio. Save the clip as an MP3 for use on most cell phones. If you choose to use an online editing program, upload the file to the vendor's website and follow the instructions to create the clip. There are many places to sell digital products online. Some of the websites that offer audio editing programs also provide stores or markets on the site where you can sell your work. Please note that many charge a fee for the service, which could be calculated per ad or per sale. If you prefer to keep all the benefits, consider selling your ringtones through your website or blog by installing an e-commerce shopping cart on your page. Apple product content is more regulated and only available through iTunes. If you want to sell ringtones for iPhones in iTunes, you must have a catalog of at least 20 albums or sell through one of the company-approved Apple aggregators. Aggregators form and deliver content to iTunes for a fee. They include dealer sites such as Snipsell, Catapult and TuneCore. Many ringtones are songs by popular artists. However, please note that it is illegal to use licensed work without the owner's permission. If you want to make ringtones for a popular song, movie track, or other copyrighted product, contact the creator or licensing company. Please note that you will have to pay a royalty fee on each shade call that sells containing the job. A ringtone is the sound the phone makes when there is an incoming call. Tones are available in many different sounds. Although your phone comes with some ringtones, you can download additional ringtones directly from your mobile phone service provider or from one of the many websites that offer ringtones [source: Beck]. This requires your phone to be connected to the over a wireless connection. There are different types of ringtones, including: Music Ringtones Your phone will play part of a melody every time it rings. Voice tones You'll hear a recorded voice every time there's an incoming call. Sound tones You will hear sound effects when the phone sounds [source: ATT]. Here's how to get ringtones offered by two of the most popular cell phone providers. Verizon Announcement Tap the Get It Now arrow, which also acts as the right navigation arrow on your phone. The Get It Now browser opens. Scroll down the list with the navigation arrow until you see Get Tunes & Tones.Press OK. Select 1. Get ringtones and press OK. Choose 1. Get new app and press OK. Select True Ringtones and press OK. You are now connected to a list of available ringtones. Select VZW Tones Deluxe to download the ringtones to your phone [source: Verizon]. AT&T Go to the AT&T AppCenter home screen and choose Categories.Choose Ringtones, Ringback Ringtones, Games, Apps.Choose Ringtones.Filter to select the ringtone you want to download. Choose Get It and enter the information you will be prompted for. Choose Buy to download that ringtone for your phone [source: ATT]. If you want to buy ringtones from an online store, simply visit the online store and follow the instructions listed there. The first step in adding a ringtone to your phone is to find one you like. Generally, this means reviewing one of dozens of ringtone sites on the Internet and choosing a good one that is compatible with your phone model. Some sites charge for the use of their ringtones, to cover song royalties, among other things, and some sites provide ringtones for free. Many old songs (such as classic pieces) have been around long enough for their copyright to expire: they have entered the public domain, so they are free for anyone to use. Once you've found a ringtone you like, just get it in your phone's memory. There are a number of different ways to do this, depending on your particular phone model. The three main ways to add a new ringtone are: Announcement Load the ringtone program on your phone from a computer, via a data cable. Send the program to the phone by the airwaves. Type the program on the phone directly, using the keyboard. Phones can use a particular method exclusively, but many phones have several options. Refer to the instruction manual to find out what your phone can do. If you have the right phone, and computer setup, loading ringtones via a data link or infrared interface may be the simplest option, but it requires a little work and expense to set everything up initially. A more popular method is to send the new ringtone to your phone via airwaves. This approach originated with Nokia, but other manufacturers have since added this capability to their phones. The basic idea is to send the phone to Type of text message that contains the program for ringtone - on most phones, this is done using short message service or enhanced messaging service technology. Nokia originally developed Short Message Service to send short text messages between phones. Later, Nokia and Intel created intelligent messaging, a special protocol for sending functional and non-text information via SMS. Basically, a smart SMS message is encoded to allow the equipped phone to recognize it as a graph, ringtone, etc. The most common method to transfer ringtones via airwaves is to visit a ringtone website, choose a ringtone, enter your phone number and let site administrators send the message to your phone directly. Alternatively, you can use an SMS gateway site to send a specific message to your phone yourself. This means finding the code for the ringtone you want, finding it in the appropriate format (Nokia binary format, for example) and copying it as a smart message. Cell phones with a melody composer allow you to write ringtones directly. The easiest way to use this feature is to find the right keystroke sequence for a melody on the web. This sequence will tell you which buttons to press on your phone, in composer mode, to program the ringtone you want (see your instruction manual for details on your phone's composer mode). Of course, for the ringtone to work, the sequence has to be in the correct format. Fortunately, you can find tons of sequences online for most phone models. As cell phones evolve, ringtones will become more complex as well. Already, some phones have polyphonic tone capability, which means that the phone can play more than one note at a time, allowing richer and more harmonized melodies. Some new phones allow you to record songs and voice messages for ringtones yourself. Many of these models also allow you to assign different ringtones to different incoming numbers, so you know who is calling you without even looking at your phone. In a short time, ringtones have graduated from a strange emotion to an essential feature of the phone. To learn more about various ringtone formats as well as hundreds of ringtones available online, check out the links on the next page. Ringtones allow you to customize your iPhone with melodies and sounds you like, even allow you to assign specific ringtones to various contacts. The easiest way to add a ringtone to your iPhone is to buy it from the iTunes Store, usually for 99 cents or \$1.29. But if you prefer not to spend money, create free ringtones using songs you already own, or visit a website that offers free, legal ringtones for download. The information in this article applies to any iPhone. Although it takes a little effort, it's possible to create a new ringtone from a song you already own in your iTunes library. To do this, select a song you own that is saved to your local hard drive; your song may not be in the cloud or Internet. It is not possible to create ringtones of songs in your library that were downloaded with Apple Music; the song must be purchased from iTunes or imported from a CD you own. Decide on a song in your iTunes library. The maximum length of a ringtone is 40 seconds; for text message tones, the maximum length is 30 seconds. Mac users: Choose iTunes Preferences > General. Windows users: Select Edit Preferences > General. At the bottom of the window, click Import Settings. In the Import Settings window, go to the Settings drop-down menu. (Note which settings are currently selected so that you can return to the end of this process and restore it to your original choice.) Select High Quality (128 kbps) from the menu, and then select OK. Make sure that you also have AAC selected as the import format, if it is not already selected. Locate your song in iTunes library. Listen to it and write down the start and end times of the clip you want to convert to a ringtone. Right-click the song and select Song Info. Enter the start and stop times that you noomed in the available fields. Select OK. From the iTunes menu, choose File > Convert > Create AAC Version. This will create a new file with only the clip between the start and stop times you set. Find the newly created music clip file in iTunes (it will have the same name as the original song but with a short duration). Right-click the new file and select Show in Finder. In the Finder window, right-click the new file and select Rename. Change the extension from m4a to m4r (m4r is the file extension for ringtones) and press Enter. Now you've created a new ringtone! You won't need the clip in your iTunes library, so you can delete it. In iTunes, right-click the new file name and select Delete from Library. When asked if you want to remove this song from your iTunes library, select Delete Song. When prompted to move the song to the Trash, click Keep File. When you have finished creating your ringtone, return and delete the start and stop times of the original song and restore the initial import settings. In your iTunes library, select the original song file. Right-click the song and select Song Info. Click OK. Then restore the changes to the import settings. Select iTunes (on a Mac) or Edit (on a Windows PC) > General. Select Import Settings. Select the Settings drop-down menu and choose the original settings. Now that you've created your ringtone file, add it to your iPhone. Connect your iPhone to your computer. (Unlock your iPhone if prompted.) At the top of the iTunes window, select your iPhone. In the left sidebar, under On My Device, select Ringtones. If the left sidebar is not visible in iTunes, choose View > Show Sidebar. From the Finder window, drag the new m4r tone file to iTunes and drop it into Ringtones At the bottom of the iTunes window, select Sync. When syncing is over, your new ringtone will be next to all the other ringtones on your iPhone. If you want to venture beyond iTunes, there are websites that offer ringtones for free. The problem, however, is to make sure that your source is truly free and legal (not restricted for use by copyright). Here are some websites that legitimately offer free ringtones. These sites also offer other content, such as videos, games, apps, and wallpapers. Zedge's website offers a wide range of ringtones, including songs, ringtones, and other random sounds and effects. (Wallpapers are mixed with offers.) There is a Zedge app for Android users on the Google Play Store, which offers ringtones and wallpapers. Zedge's iPhone app, however, only offers wallpapers. Tones7 has a good range of ringtone types and a considerable list of categories to make navigating that perfect ringtone easier. Still, these aren't going to be Billboard's best hits. Notification sounds provides ringtones created on synthesizers. If you're looking for beeps, dosops and Martian-ray guns, this is the place for you. When downloading files from any website, consider legal considerations. The content itself usually provides clues. For example, if a site hosts free ringtones from the latest songs that cover graphics, then it's probably best to stay away. Ringtones allow you to express yourself beyond the normal squeaks, timbres, and radar sounds that everyone else is using. With a little effort, the songs you like will personalize your iPhone experience. Experience.
