Graphic design assignments examples

Graphic designers develop visual solutions for communication. Whether in print, film or electronic media, graphic designers provide information through art. If you think you have what it takes to become a graphic designer, follow this general guide to start a career in this field. Build a foundation in high school graphic design requires skills that come from a wide range of knowledge. Take courses such as art history, studio art, graphic arts and website design in high school to get started [Source: CollegeBoard]. Bachelor's degree Some graphic designers can land a job without a degree or formal education. In most cases, however, it is quite difficult to engage in graphic design to live on without studying at a high level [Source: Education Portal]. Many universities, universities and design schools offer various degrees in graphic design. A bachelor's degree is ideal for landing a good job, but an associate degree or certificate may be enough to be a graphic design assistant [Source: BLS]. Establishing a broad competence base requirements for graphic designers can vary greatly from project to project. The best way to ensure that you are always needed is to be qualified in many different areas. College-level courses in web design, Photoshop, production design, typography and advertising can help you expand your skills [Source: CollegeBoard]. Stay up to date The world of advertising and media is changing at an incredibly fast pace. It is imperative to keep up with trends and developments in the industry if you want a long and successful career in graphic design [Source: BLS]. Graphic designers create a variety of visual presentations, from company logos and product labels to website graphics and glossy magazines. It is a job that requires creativity, computer software skills and excellent communication skills to create images and designs that please a wide range of customers and the public. The median salary for graphic designers in 2010 was 43,500, according to the U.S. Bureau of Labor Statistics. To get a job as a graphic designer, you need to show that you have the education, experience and talent. Competition for graphic design jobs is fierce, with average employment growth of just 13 percent between 2012 and 2020, according to the BLS, so it's important to get a bachelor's degree in graphic design or visual arts. The fields with the greatest demand in the coming years will be interactive media and website design, the BLS notes, so consider looking at courses. Basic art courses are synonymous with the course, but business and marketing courses can give you an advantage over other candidates for a job. A portfolio is essential for all aspiring graphic designers. Potential employers get a good idea of their talents and skills by looking at past projects. You don't need a work experience to build a portfolio, as it's for beginners to use images created in class projects. It is a good idea to work on internships during your studies and use all the images that were created in your portfolio during this time. Print your images on high-quality paper and use a professional portfolio to view your work. While artistic skills such as drawing and painting are important, much of the work of a graphic designer is done on the computer. Advanced skills with graphics software are essential. You should know how to use programs such as Adobe Photoshop and Illustrator, Quark XPress, InDesign, and AutoCAD. Knowing how to design specifically for web or mobile applications is helpful. Devices you should feel comfortable with include digital cameras and a variety of printers. Whether you're working for an established company or choosing a freelancer, you need excellent communication skills to interact with customers who are sometimes unsure what they want. Even the best designs don't really speak for themselves, so you should be able to convey the idea or message behind them to customers. The interest in pop culture and changing trends in the market can help you stay up to date and keep your ideas fresh. The ability to be original and flexible to adapt to the changing needs of customers is crucial. Graphic designers earned an average annual salary of 47,640 u.a. in 2016, according to the U.S. Bureau of Labor Statistics. At the lower end, graphic designers earned a 25th percentile salary of 35,560 US dollars, which means that 75 percent earned more than that amount. The 75th percentile salary is 63,340 US dollars, which means that 25 percent earn more. In 2016, 266,300 employees were employed as graphic designers in the United States. Given the abundance of similar products on the market, it has never been so important for a company to have a clear, recognizable image. At a glance, a logo, package, or website must come from the consumer, and graphic designers are essential to this. But not all graphic designers start with their own customer base. Instead, they serve as junior designers, with salaries that are much lower than their middle or older counterparts. In 2011, the average salary of a graphic designer was nearly 49,000 a year, the Bureau of Labor Statistics reports. But high salaries of senior designers distort that figure. Junior designers tend to earn less than their more experienced counterparts. The salaries of designers are often reduced by their chosen design medium and young graphic designers are no exception. The American Institute of Graphic Arts, the professional association for design, conducted a survey in 2012 and found that young graphic designers, who work mainly in the print sector, earned an average wage of USD 38,000 per year. Those who design for web and interactive media earned an average wage of nearly 40,000 a year. Junior designers, who focus on both print and the web, earned 38,500 a year. As with any design professional, junior graphic junior graphic can be self-employed. Like the annual salaries, the chosen design medium affects the hourly rates. According to AIGA, young designers working in print media charge an average freelance allowance of USD 25 per hour, while those who design for web or interactive media charge USD 33 per hour. If a junior designer works in both disciplines, he charges a median of 28 dollars per hour. The Bureau of Labor Statistics forecasts employment growth of 13 percent for graphic designers from 2010 to 2020, exactly the same as the projected 14 percent growth rate for all U.S. occupations. But the print media, which is expected to grow by only 2 percent in these years, are cutting job growth for designers. Graphic designers working in computer system design expect employment growth of 61 percent, while those working in a specialized design service such as signs or posters should see employment growth of 27 percent. As a graphic designer—whether you work with a creative director in a design agency or as a freelancer from home—you'll get in touch with some pretty frustrating customers. While there's no easy way to get customers out of hell, you can use their ridiculous desires for your own inspiration. This Zerouno project collects all the ridiculous quotes they have received from customers over the years and turns them into some pretty wonderful typography posters. It's a hilarious and often shocking insight into what customers want from their designers. If you hear one of them while you're doing a project, it might be time to dispose of a customer, but if that's not an option, you could turn it into a fun project like this. Have you heard about it yourself? Let us know - we'd love to hear about it! The best free graphics design software is important for amateurs and professionals alike, making life easier in an expensive, tech-heavy industry.
