Words with v and z

Photograph: Ramune Golsyseniene/Moment Open/Getty Images Z is the 26th letter of the English alphabet. In the UK, Ireland, Canada, India and Australia it is pronounced zed. In the United States, the same letter is pronounced zee. Differences in pronunciation have different origins. Zed comes from the Greek letter zeta, while zee is a continuation of how B, C and D are pronounced. This last pronunciation originated at the end of the 17th century. As the last letter of the alphabet, Z may be the most underrated. This is one of the least used letters. Around 300 BC, it was even removed from the alphabet because the Roman censor Appius Claudius Caecus decided that the letter was archaic. Two hundred years later, Z returned to the remaining 25 letters in English. Initially it was used only in loanwords from Greek, but was eventually fully adopted back into the language. However, this was not always the last letter. This honor goes to &, which had its shape more than 1500 years before it was called ampersand. Are you a fan of the letter Z?
