This is the first job of this IT pilot fish out of college, and the company he works for just hired a new VP of sales and marketing from a major computer vendor. To motivate us and make a big splash, he made a T-shirt that said 5280+1 on the front and said Go extra mile! on the back. I said, says the fish. We all got one at a full-time meeting. There, in front of 130 colleagues and managers, he said, 5,280 is the number of legs per mile, so really, this shirt says, Go the extra foot. A dead silence from my companions after blowing a collective breath to my audacity and pointing out the obvious. The new VP does math with Sharkey, I'm from marketing! sharky@computerworld the real story of IT life on .com. If I use it, one story is equal to one nasty shark shirt. Comment on today's story in Sharky's Google+ community and read thousands of great old stories in Sharkives. Subscribe to the Daily Shark Newsletter Copyright ©2017 IDG Communications, Inc. skips to the content, add fun and games to this important theme, and soon you will hear I love math. Little kids naturally love to count, sort, do puzzles and discover patterns. However, when these activities are labeled mathematics, with daily additions, multiplications, minutes, and long divisions, many children lose both confidence and interest. Standardized math tests starting in the fourth grade only add to the challenge, experts say. To make sure you're ready, schools tend to introduce students to complex issues before they learn the basics. It's no wonder that many people get frustrated with the subject - or math scores among children in the United States are decreasing compared to those of students in other countries. It's important that young children are well versed in mathematics, so they don't get intimidated when the curriculum accelerates and becomes more difficult, says Dr. Patricia Clark Kenshaft, author of Mathematical Power. Don't schedule 30 minutes of training every day to ensure it. Instead, find a way to make it fun. To improve her eight-year-old son Jake's math skills, Beth Brody, a mom from Stockton, New Jersey, circles what he wants to buy in the catalog. When he's done, she asks him to sum up the total cost. Jake's Challenge? You can let the kids use the calculator, but even though he hasn't made any additions himself, you're still promoting math literacy! Create a shop pretending to sell her favorite things to enhance your child's money skills. Give her a budget and some real money to spend (you want her to learn the value of coins and banknotes. Set the price and throw some coupons into the mix if you want it to be even more interesting. challenge her to stay within budget during shopping. When she's done, let's change places and make her a cashier. Kitchen tools provide a great opportunity to teach your child about minutes. Ask your junior chef to help you with your dinner, but instead of shaving rice, indicate that three-thirds of a cup is equal to one cup. Use a measuring cup to explain that three-eighths are less than half. Showing him how to follow the recipe will also help with math literacy - and feeling comfortable with numbers will help to make abstract concepts more specific. Explaining how to tell the time, your child will give more than just life skills. He also involves addition, subtraction, and minutes. Make sure there is at least one non-digital watch in the house. Turn practice into a game: Call Time - Move your child's hand to the right position and add or subtract minutes and hours. To raise the stake, replace the place and let him call the time and warn him that you are going to intentionally make a mistake that he must catch. Adding in 5 and 100 will help your child develop a sense of number relationship and multiplication. Take advantage of downtime, such as riding a car. You may want to start things and ask for help when you get stuck. Find math opportunities wherever you are: Supermarkets count cans of soup in groups of four and add and subtract three packets of sugar while waiting in a restaurant. And don't forget about the pattern. Look for things like geometric wallpapers, tiles - even bricks. They are all feed for discovering interesting repetitions. If you raise a cry each time you aggregate a check, you may be sending a negative message. So if elementary school students complain that they don't like math, don't say, Yes, me too. Instead, find out why your child feels this way. Perhaps he was embarrassed because he didn't know the answer when the teacher called him. He may be bored because he is threatened by the multiplication table or, conversely, the class moves too slowly. To change your child's attitude, let him remember all the important things that mathematics is used for. This will determine the winner of board games and baseball batting averages. Math measurements ensure that his favorite cookies turn out to be delicious every time. It also points out people with cool careers who use math formulas every day, such as astronauts, video game programmers, scientists, and race car drivers. Boys once outperformed girls in math tests, but that's no longer the case. In fact, girls actually get higher math grades than boys during the early grades. Still, men outperform women in mathematics, and some gender stereotypes persist. Field. Parents are responsible for some of this disparity. From a young age, boys tend to be given toys that promote math skills and spatial thinking (building blocks, Tincart Is, Lincoln Log, etc.) rather than girls. When a child attends school, mothers and dads (and often school counselors and teachers) tend to push their sons to do so and stop their daughters from taking higher-level math courses. This leads to girls losing confidence in their math skills and shying away from subjects, according to a study by the American College Women's Association. We need to encourage girls to enjoy math and make it better, said Megan Franke, an associate professor of education at the University of California, Los Angeles. Games: Mancara (6+ years, 13; cardinalgames.com) That teaches: Count, Strategy Game: Dino Math Track (6+ years, 22; toys4minds.com) That teaches: the value of the place, multi-digit addition and subtraction games: Uno (7+ years, What it teaches: number recognition, smaller, larger, addition game: passing pigs (7+ years, 14; fantastytoyland.com) teaching: counting, addition, subtraction games: Brocks (6+ years, 30, teaching educational insight.com anything), all right to teach spatial © skills are reserved. Updated by Kate Hurth and Anjanette Connorst March 27, 2020 9:22:31 AM ET Photo Credit: When it comes to Klaus Vedfslid/DigitalVision/Getty Images games, math may not be the most exciting game theme for most people, but you shouldn't rule out math games without giving them a chance. Whether you're studying for an up-and-next exam or looking for cool math games for your kids, some websites stand out for their fun and educational options that are really conveniently categorized into specific age groups and topics. There are various sites that produce games for young people, from preschool to sixth grade, as well as fun games for kids, teens and even adults. A lot of popular math games, regardless of target age, are available on the internet for everyone to enjoy. Coolmath.com has a number of games between the ages of 13 and 100. For young children, another Coolmath4Kids site is available. Both sites teach math in a fun and informative way, but sites for faster children and adults make it easier to learn algebra and pre-cal products by explaining concepts in a particularly engaging and memorable way. Photo Credits: Some of the most popular math games on the @TheRealCoolmath/Twitter site include Moto 3XM, which relies on math skills to reach the finish line, and Run 3 including skating, running and jumping exciting new galaxies to win the game. Other popular games include classics such as:And Hangman with a focus on mathematics. Separate from the top 10 game catalogues, the website has an array of boring new games. In contrast, Mathplayground.com is attracted to young viewers, and the majority of available games are designed for grades 1 to 6. Games are categorized into different categories such as logic games, story math, math videos, etc. This website doesn't list the most popular games in particular, but you can easily find fun games to play with easy exploration. Photo courtesy of @mathplayground/Twitter math playground where you can check out the game spotlights and new games by clicking on the fun skill game. Drift Boss is one notable original spotlight game that needs to put your math skills to the test to drive your car successfully around the track. The better your skills are, the farther your car will go. The same page features new games as well as action games to keep your brain stimulated with fresh content. Mathgames.com also corresponds to young audiences, with games for pre-K through Grade 8. Students can practice many math skills and knowledge on the site, including minutes, graphing, and mixed equations, by playing games such as Viking Queen Defense, Math vs. Monsters, Number Worms and Cat Wars. (That's right.) Move on, Darth Vader! Photo Credits@mathgames/Twitter Math Games group games and put stars next to premium games. These games tend to be the most difficult (sometimes the most fun), but you need to unlock them by upgrading to a premium service. Some of the most popular premium games on the site include math and snacks that give users the opportunity to help King Frog grow into his rank, and Viking Queen Defense, which forces players to rely on math skills to defend the kingdom from enemies. You can also calculate the amount to supply an assortment of animals when defending your planet from extraterrestrial life by playing Mathimals or playing Math Invasion. Education.com provides free access to a large number of resources at home to entertain and engage children while learning math. The site provides games for students from preschool to fifth grade, so you can easily navigate through the options in different categories. For example, you can select tasks such as mixed operations, minutes, amount calculations, data, and charts. Photo Credits: Some of the most popular games on the @Education.com/Twitter site include a candy shop array for second graders who want to practice their multiplication skills, count pizza parties for preschoolers, subtract pizza parties for first graders and different number of births for fifth graders. Someone flips the number of minutes of pancakes for breakfast, entertains third graders, and continues to learn. From temporary online learning assistance to comprehensive homeschooling tools, Homeschoolmath.netNodding to home education. This site has a wealth of resources, including online math games sorted by topic, free math worksheets, lessons, articles, and even curriculum guides. Photo courtesy of @turtlediarycom/Twitter games are classified by age - elementary school, junior high school, high school - at all levels selection. Each category has popular options such as addictive Stardoku coloring games for kindergarteners and a list of all-time favorite challenging math puzzles. Special Note: In the case of the game, Homeschoolmath.net provides an extensive list of fun games found on the actual game site, but does not provide the game itself. Itself.
