Athoc desktop notifier

The BlackBerry Ethok management system provides authorized users with the ability to quickly notify a large number of people in widely spread locations during emergencies and other critical situations. BlackBerry Ethok also helps those users monitor alerts for threat situations, while also providing basic notifications services for non-emergency situations. The BlackBerry Ethok desktop application (also known as a desktop app or desktop client) is a small desktop application that runs continuously on your computer. When a new alert targeted at the user desktop is published in the BlackBerry Ethok system, a notification screen opens on your desktop, with an audio notification. You can then turn off the pop-up or click a link to get additional information about the alert. For emergency alerts, the pop-up screen may have feedback options that you need to choose to accept a receipt of alerts. This guide is for IT administrators who are responsible for installing, installing and maintaining the BlackBerry Ethok desktop app for end users. To get information about using the desktop app to receive alerts, see the BlackBerry Ethok Desktop App User Guide. The BlackBerry Ethok Desktop App is a small desktop application that runs continuously on your computer. When a new alert targeted at the user desktop is published to the BlackBerry Ethok system, a notification screen pops up on your desktop with an audio notification. You can then turn off the pop-up or click a link to get additional information about the alert. For emergency alerts, the pop-up screen may have feedback options that you need to choose to accept a receipt of alerts.
