Last updated on 6 July 2020 by Milan Tulenkolf, in addition to playing IPTV programs in KODI, you also want to have a TV program to install the Fullscreen TV Guide plug-in, which perfectly handles these two requirements simultaneously. How to get a TV program in KODIV last article in the section of KODI articles, you can read how to activate and set up the PVR plugin IPTV Simple Client. At the end of this article, you may have been left disappointed by epg issues. Believe me, but she also didn't put me to sleep, why can't I get a TV show into the PVR IPTV Simple Client when everything has worked beautifully in the past. After the Internet on various forums I searched for URLs on EPG data in XMLTV format, but none of me in PVR IPTV Simple Clientovy worked. In the end, I decided otherwise. I stopped looking for URLs and started looking for an add-on through which I get a TV program for KODI. The first one I was interested in was the addition of a fullscreen GUIDE. I decided to try it, I wondered what he could do. I downloaded the repository and installed the fullscreen guide plugin. After installation as I tried,supplement I could not start until later I realized the need to install it and skin and set the URL to xmltv source EPG data. The great advantage of the Fullscreen Guide is that you don't have to manually insert the TV station logos into the plugin. The plugin automatically downloads logos + EPG data from the XMLTV feed. Later I learned that in addition to watching TV programs, the plugin also plays TV programs, just enter the path to the M3U playlist. The Fullscreen Guide is the perfect addition to play IPTV Live TV together from TV – EPG. That's why I want to share this information and your viewing experience with you. But enough said and watch the first video,be pictured how this plugin works perfectly. To install the FullscreenInstallation TV Guide Fullscreen guide will consist of the following three steps:Download the PrimaevaInstallation repositior from the PrimaevaInstallation repositior fullscreen1. Download primaeval repository To get a TV program on KODI you must first download the primaeval repository - 0.0.2 from github.com On the site, scroll completely down and click on the link,as shown in the photo. Then save.2. Install Primaeval Repository If you have already downloaded the PrimaevaInstallation repository file, retry the KODI media player and continue as follows:Enable installation from unknown sources. If you do not already have permission to install from unknown sources, activate it. To install a zip file, you must enable installation from unknown sources—this step is necessary. On KODI panel click on the gear symbol settings In the next step, click system settings In the Add-ons section, you will see such a warning as below as in the picture. If you click Yes, you can install from unknown sources on the next panel. If you enable installation from unknown sources, you should protect your device and personal information using an anonymous and encrypted Internet connection using a VPN service. A VPN protects not only your KODI device, but also your entire network and mobile devices that you connect to with unsecured FREE WiFi networks. In addition, using a VPN activates all additional in KODI. For KODI, the best IP is Vanish VPN and PURE VPN.PS: Read PureVPN Addon – How to install the KODI add-on If you have installed and activated a VPN you are protected and so you can continue by installing repositories and plugins from unknown sources. You can install the recipient repository by following these steps:Click on add-onsClick on the extended box symbol Install add-ins from the zip archiveClimate to the folder where you have the zip file (download) saved Click on the Primaeval-0.0.2.zipHore repository in the right corner of the screen you will see a message that the add-in is installed. If you see an error message, restart the installation. Install the Fullscreen Plugin Guide If you already have a primaeval repository installed, the Fullscreen plug-in installation guide is very simple. This time, however, we will not install from the zip archive, but from the Primaeval repository.Click to install from the repositoryClick on primaevals beta dev repositoryClick on the program plugin I click on the TV Guide FullscreenClick on the latest version. You have a full-screen TV Guide add-on installed and the message will notify you in the upper-right corner of the screen. If this does not happen, try the installation again. Attention! The full-screen guide plugin doesn't work without skin! How to install the skin. For a TV guide Fullscreen supplement to work, you need to make-install at least one skin. The supplement currently has up to 6 skins available. You can install only one skin or all at a time, and then activate the one you like best. The skins are installed in the same way as the fullscreen guide plugin itself, so I will not re-describe what is already written above. Before you start the accessory on the Full Screen Guide, first activate the skin you want to use by clicking on the skin icon, and then confirm the default skin. Only now, when mate skin is installed and activated, you can run the guide plugin with a full screen, but without settings you will not show the TV yet. Therefore, you must place the URL on the EPG data source. Set up a Guide to unlock your full screen exclusive content using one of the sharing buttons. To receive a GUIDE in addition to the full-screen TV Guide, you must enter the URL of the XMLTV EPG source. For an add-on to the full-screen TV guide, see additional add-ons for additional program-based add-ons. Right-click the full-screen Guide icon, and then enter your settings. You'll see a setup window open. In source - XMLTV Original settings, set to URL. Then click the next row of the XMLTV URL. For example, type the URL here in the new window: and click OK. I found this address somewhere on the forum,interesting that in Add-on PVR IPTV Simple Client did not show me the TV program, but in this add-on works perfectly. I therefore thank the author of this EPG data source. If you have an additional URL for your EPG data source, you can click the plug-in icon to run the Full Screen TV Guide add-in. You will wait about 10 seconds for EPG data from sources to load and open TV programmes of more than 100 Slovak, Czech and foreign TV channels. To make it easier for you to install and set up full-screen TV guide plugins, I've prepared a video tutorial for you. Watch it, to install and set up the Fullhow Guide to add a playlist to the TV guidescreen fullA very convenient fullscreen guide option is viewed by Live TV directly in this plugin. If you choose an interesting program, you can also watch it now, just click. You don't need to run another PVR add-on, such as PVR IPTV Simple Client or Playlist Loader. A free M3U playlist containing Slovak and Czech TV programmes can be downloaded, for example, from Save.toor FastShare.cz, etc. Important:Downloading free letters from the internet is in most cases illegal. (Copyright Act, Broadcasting and Reenimate Act) If you download and use free play-letters from the Internet, you do so at your own risk and the author of this article cannot in any way influence your decision. This article is intended for study purposes only and does not allow illegal activities from now on. According to the public IP address assigned to you by your INTERNET service provider, it's easy to track your activity online – which websites you surf, what you download and what you send online. In addition to the VPN service above, you can keep your identity online and encrypt data transfer with an unbreakable algorithm. Cheap play-letters can also be purchased at China's AliExpress eshop. Free exam. If you've already downloaded the playlist on your device, follow these steps:Click Program You will see again the next WindowClick on importing the playlistYou see a folder from the playlist Click on the save button Restart the add-in and click again on the selected program If you do not start playback and reopen the same window as before,please do as follows:Click the button strim m3u filesChoose the folder with the playlist Find in the list the channel you want Click on the save button now. If you click on this channel, you will start live TV. If you don't start broadcasting, it means you have a broken playlist, so you have to use another one. For a better understanding, I've prepared the last video for you. Have a nice overview. Finally thanks to the creators of KODI and accessories. The addition to the FULLSCREEN GUIDE includes many other settings. I'll leave the experimentation to you. If you find something interesting, share it with other readers by writing comments below the article. Thank you. Thank you.
