AdvantagesThis benefits are some of the advantages of this type of pump action rifles:ReliabilityPump action rifles are completely reliable, because the action is manually controlled, and jamming problems are negligent. Since you do not need to rely on the gas pressure of the cartridge to perform the action. In addition, these weapons work with ammunition of all kinds of rifles, including non-lethal ammunition. Ammunition preservation The action of the pump of these rifles allows you to preserve the ammunition, ignoring those quick-release instincts for some people. This is because you have to rack upend after each shot, giving you enough gap position to acquire and accurately achieve your goal. Powerful, inexpensive and normal partsThis rifles are very powerful and effective in close proximity compared to any other firearm. Therefore, they are a devastating weapon. In addition, these weapons are properly inexpensive and easy to find parts and adapted for their joint ownership. Pump action guns are very easy to operate and maintain. There are people who have been shooting their pump steps for years without any proper cleaning or maintenance (but this is not recommended) and the weapon works well. SourceHowever, it comes with some flaws, including:Noisy OperationWhen that chik-chik sound these weapons may seem interesting. This can be a gift in home defense situations where you desire to remain silent and discreet. Although on the contrary, this sound has been known to scare off future invaders. So these are 50-50.Handling restrictions and recoilA pump action can not be properly used in inclined position (or anywhere you can not rack forend) and it must be controlled using both hands. In addition, the resoundness of the pump action is known and requires practice to get used to. Reloading rimes, limited-range and CapacityReloading pump action in some cases can be a clumsy business (unless you have a rifle speed loader). In addition, these rifles have a limited capacity and a short effective range, so they are suitable only for close encounters. How to assemble and reassemble the pump action shotgunwhile capture and not very difficult. You need to be careful in several stages, because inside the action there are several free parts. Let's lay it out step by step. DismantleE the weapon so that it is clear from all rounds and perform a safety check. Now screw the plug of the magazine pipe, holding the rifle upside down. Push the mag spring, turn the gun over and pull out the barrel. and lock the gun back into a safety position and push out the support bolt under the trigger assembly. Make sure you don't turn on the trigger. The cartridge breaks and stops falling out, so be careful here. Now pull the action three quarters back and pull out the slide plate that the action is followed. Push the screw slightly forward and pinch the lift. After that, push the screw out of the front. Do not try to remove the prom, because it will not be worth it. It's a complete dismantling. SourceFor assembling, turn the gun upside down, take the screw with the firing pin forward and play it in the grooves behind the prom. Now push the lift back and it will properly push the screw into place. Push the action back through the mag tube, aligning it with the grooves. Put the slide plate back. Now place the cartridge stop and breaker back. This is the hardest part, so do it very carefully. Put the trigger setup back on and it must be grabbed into place. Unsee the support. Push the barrel back, insert the spring and place it on the cap of the mag tube. Some steps in this procedure may seem a little difficult to perform.
