Change rate is 0.1. For every extra minute spoken, the monthly cost increases by 0.1 or 10 cents. The initial value is 24. When no minutes are spoken, the charge is initially \$24. 73. Slope is -400 . -400 . This means that for every year between 1960 and 1989, the population in the city declined by 400 people a year. 1. Domains are equal; 3- The intersection point is (a, a) . (a, a) . This is because for the horizontal line, all coordinates are $y = a$ and for the vertical line, all coordinates are $x = a$. The intersection point will have these two features. 5. First find the slope of the linear function. Then cross-negatively tilt; Replace the slope of the perpendicular line and the coordinates of the given point to the equation $y = mx + b = mx + b$, and for b , then type the line equation as $y = mx + b = mx + b$ by replacing in m and b . 7.
