Balance the scale worksheet

— Note: The above information will not be sent to the printer — Name: _____ Use what you know about balance scales to write the weights of the objects below. Note: The measurement weights are in grams. — Note: The information below will not be sent to the printer — Try the next worksheet in this series

The resource ranges listed below are aligned to the same standard, (3MD02) taken from the Common Core Standards For Mathematics (CCSM) as the measurement worksheet shown above. Measure and estimate the volumes of liquids and masses of objects using standard units of grams (g), kilograms (kg) and litres (l).

1. Add, subtract, multiply or divide to solve word problems in a single step involving masses or volumes that are given in the same units, for example, by using drawings (such as a glass with a measuring scale) to represent the problem.

2. Example/Orientation/Measurement volume (3rd grade) Weight and volume (3rd grade) Measuring weight (grade 3) Worksheet Volume/Weight similar to the list above, the resources below are aligned to related standards in the common core for mathematics, which together accept the following learning outcome: Solve problems that involve measuring and estimating time intervals, liquid volumes, and masses of objects

This is a pan or scale balance. Things go in the two pans and the heavier pan will go down, like in a rocking chair. If the two things weigh the same, the balance remains balance. Write an equation for each equilibrium situation. Then solve how much each geometric shape weighs. Here we see a balanced balance pan with equal weights on both sides. We assume the weight is in the unit. Students will find the equation and solution for the shapes in the provided chart. Ten problems are foreseen. Use charts to write an equation and solution for the shapes on the scale. Ten problems are foreseen. Write an equation and solution to represent the values found on the scale. Eight problems are foreseen. Students will practice reading scales and understand the table on them. Three problems are foreseen. Using either pounds or kilograms units, determine the weight of the yellow square. The above equipment is called a balance scale. If the objects on the ladder are level, they weigh the same. If they are unequal, that ever object is smaller is also the hardest. Solve how much each geometric shape weighs. Use the unit of kilos. Find the mass of values that are shown on the scale. Ten problems are foreseen. Students will write and resolve the equation that describes each chart. Ten questions are asked. Students will refer to the chart to determine the mass series of items. Eight problems are foreseen. Students will write the masses and weight of a set of different objects. Three problems are foreseen. Fun easy to use word search great worksheet for under plans, plans, input tasks, heating exercises, homework, vocabulary review. Word search topic: Basic scientific equipment for measuring

Words included: convert, displacement, density, gravity, graduated cylinder, liquid, matter, measure, measu

Balancing a Scale Reaching Static Balance , which happens when the weight on both sides is equal. Let's move on to balancing the scale in these pdf worksheets by calculating the weight of an object whose weight is unknown. This can be done easily by adding up the weight of objects on the other side of the scale, so as to make both sides equal. Access our free printable balancescale worksheets immediately to put this into practice. These pdf worksheets are recommended for 3rd, 4th and 5th graders. CCSS: 3.MD, 4.MD You are here: Measuring & Weight & Balance Scale | Metric measurement
