In fact, there's a good chance that you'll often need a way to carry more than one; you'll probably want to go with friends and family too. At the very least, consider that at some point, you may get married or have children who share your kayaking adventures. As time goes by, it will become increasingly apparent to you that you need a kayak trailer. We reviewed dozens of kayak trailers to identify the best of the best. When looking for a trailer for your kayak (or kayak), there are a few features you'll love to consider and we found the thing and why it does what. We watched kayak trailers towing with your vehicle and hand trailers that allow you to let your kayaks into the water without the chaos. After all our research, it was abundantly clear that the Malone XtraLight base trailer had to be our best choice. It connects firmly to your truck or SUV and has brake lights to make sure those who follow you know when you're braking, keeping you safe. The top 5 top rated kayak trailers * Ratings come from Amazon at the time of publication and can change Our best choice: Malone XtraLight Base TrailerThe Malone XtraLight base trailer is designed to carry two kayaks (or canoes, if more suited to your imagination - or if you like the versatility of being able to use this trailer for both). You can mount a decently wide kayak on the rack, up to 29 wide fit comfortably with each slot. You'll place these kayaks in the trailer down and count on the extra padding to protect them. The electrical, mechanical and hub connections are pre-mounted, are universal and give the trailer brake lights approved by the Department of Transportation. These complement DOT-approved road safety tires and suspension whales make the trailer even smoother and safer for your kayaks and your trip. This trailer only has a handful of reviews on Amazon, but still a 4.9 star rating and if you want to find some of them details, you can check the Malone site. (But you'll save a bit if you opt for an Amazon purchase.) Malone XtraLight Base Trailer Main Features:Zinc steel construction275 lbs maximum warranty weight capacity of manufacturer 5 yearsYe your second floor Pick: TMS CART-CANOE Deluxe Boat Kayak Canoe CarrierThe TMS CART-CANOE Deluxe Kayak Carrier is made with aluminum tubes and reinforced with anodized stainless steel so that your trailer is lightweight with longer life. The tires have a durable solid 9.5 in diameter and handle grass, gravel and sand well, so taking this to the beach is a breeze. And the no-air

feature means you won't have to recharge your tires between uses. This hand trailer acts as a dolly for your kayak and folds flat for extra compact storage or transportation. Portability is so convenient that you might find you're keeping it in the back of your vehicle; and if you kayak frequently, this is probably especially attractive to you. With over 400 customer reviews on Amazon and an overall rating of 4.3 stars, there's no shock that it's Amazon's Choice for the kayak cart. TMS CART-CANOE Deluxe Boat Kayak Canoe Carrier Key Features:Max load capacity 120 lbs2-sided kickstandIncludes a 12-foot long connecting strap with buckleBest Budget Pick: Bonnio Kayak Cart Canoe Carrier TrolleyThe Bonnio Kayak Cart Canoe Carrier Trolley has a loaded spring support that will keep the trailer stationary during loading and unloading on the shore. And this will also make just rolling from point A to point B a smoother process. It breaks and stores plate so you can take it without taking too much space. This kayak hand trailer comes with your choice of a U-shaped easel or an inverted U (more like an n-shaped easel). The U-shape will probably work best to stabilize in sand or gravel, and the N-shape will sg in a more solid soil. There aren't many customer reviews on Amazon, less than 100, but they gave this trailer an overall rating of 4.5 stars and if you check out other sites (and we have!), the reviews are consistent with that rating, no matter where you look. And if you want a good deal, this is what you're looking for; it's only \$55! Bonnio Kayak Cart Canoe Carrier Trolley Key features:165 lb maximum load capacityInclude two 5ft bungee cables and 12ft spare strap10 solid tiresBest Truck Kayak Trailer: Yakima Rack and Roll TrailerBest Hand Kayak Trailer Yakima Rack and Roll TrailerThe Yakima rack and roll trailer will stick to your vehicle and make transporting your long kayaks distances smoothly. The Yakima Rack and Roll Trailer has Shock absorption system that has the same style as a full-size motorcycle, making running smoother for your kayaks and with them less likely to be damaged by any of the bumps or bumps that come with any road trip. Why sleepers are compatible with any Yakima Yakima (and others, if reviews need to be believed; even if they don't advertise it), you can use it for more than your kayaks as well. You can also secure a cargo carrier next to your kayak, or a bike or two! (Just pay attention to the weight.) As an anti-theft precaution, this trailer will lock your kayaks to the beams crossed with levers that use the keys to keep them safe; and that means you can feel a little safer grabbing a bite to eat during your water trek. (And this is especially important if you have a long journey ahead of you.) Our favorite part of this trailer is that once detached from your vehicle, you can use some sort of easel and still use your raw force to maneuver this trailer. We're not going to go so far as to call it hand trailer in this mode, but you won't have to park it in the right spot. Which will save those of us who struggle to back up with a trailer a lot of pain and headaches. Yakima Rack and Roll Trailer Key Features:Locking levers with keys78 sleepers300 lb maximum load capacityBest Hand Kayak Trailer: Ctug Kayak or Canoe Trolley Cartll Ctug Kayak or Canoe Trolley Cart has an adjustable seat for your kayak that will allow you to secure the boat from bottom to bottom and a padded cushion that folds in the shape of a V. The straps are integrated and allow you to fasten the buckle even in the kayak to the trailer. The construction of this hand trailer is extra durable but lightweight; it is made of non-eroded polymer and reinforced with stainless steel axles. The no-flat tires are solid and prevented you from having to constantly recharge the air. It assembles without the use of tools and within seconds, making it an easy transport. The numbers on this kayak hand trailer suggest you'll probably be satisfied and we agree! With over 150 customer reviews and an overall rating of 4.6 stars, you can make this purchase with confidence. Ctug Kayak or Canoe Trolley Cart Key features: easy and casual mountingLight weight - only 10 lbs300 pounds maximum load capacityWhat should buy a kayak trailerThe more kayaks you own and more often you use them will determine how much you would benefit from a kayak trailer. It is true that for one (or maybe 2) you can throw it in the back (and front) of your SUV or tie it to a rack, but even this is definitely a fight that you don't want to do frequently. Even if you have a smooth and simple method of transporting your kayak, that doesn't mean you have a good method of transporting it from one truck to another or from a pier. A hand trailer to pull the kayak from the car to the tent and then in the water will do a lot to keep your trip stress-free. You may also want to take a trailer kayak if you're thinking long-term. If you have a lifestyle that lends itself to adventure, then it is reasonable to assume that it will make you friends or build a family that will come together Kayaking. It's not a bad idea to take a trailer before building that family because you'd probably better be able to afford it. And, to put it in a way that your personal interest will like: if you're the person who has the kayak trailer, you're pretty much guaranteed hiking invitations. Important features to considerA trailer for kayaks should do several things well. Here's what to consider when selecting a trailer for your kayaks: Tires. If you're going to get a truck trailer, of course you'll want to have tires ready on the road. You will make sure that the tread is not worn and that there are no leaks or punctures. If you have a hand trailer, you might want to consider the type of water you'll put your kayak in. If you're going to go to the beach, keep in mind that some tires work better in the sand than others. Similarly, the lake may have a muddy entrance that you could plan ahead with more substantial tires. Straps. Of course you want to attach your kayak to the trailer before setting off with it. (And always make sure the straps are tight and the kayak doesn't move before you leave.) But keep in mind that hand trailers will also need straps to keep them safe. You're not planning on bumps and trips, but they happen, and if your kayak isn't tied up, you may have a hard time charging in the most uncomfortable places. Or worse, the fall could damage your kayak and then you're up the creek - without a boat. Multiple kayak space. As mentioned a few times, you may want to plan ahead for more kayaks, even if you only have one now. If nothing else, you can better host your travels. After all, adventures are often enjoyed better with a partner. Not to mention that having an adventure companion makes your outing safer. If the worst happens, you will be grateful to have someone there with you; could save your life. (And with that other person's safety net, you can get into more adventurous adventures.) Brake lights. Another great safety feature that you'll love to examine for your truck kayak trailer are working brake lights. If the car behind you on the road doesn't know you're braking, it's more likely to hit you. Checking the laws of your states on trailers and brake lights can make it more of a practicality and safety issue; you may find that it is the law in your state. Tripod. If you are shopping for a hand trailer that you will work by hand (of course), you will like to examine ease of use and one of the greatest operational conveniences is an easel. Using an easel (as with your bike) you will be able to take your hands off your kayak without it falling to the ground. This means that run to the bathroom, dress up your life jacket or just high-five your brother without damaging your kayak. Frame construction and weight. Weight, consider the weight of the trailer and the towing capacity of the vehicle. Most likely your car would be able to tow a couple of kayaks, much less your truck, but you'll want to keep that in mind. And while doing your research remember that aluminum frames will probably be the lightest option. FAQWhat is a kayak trailer? A wheel carrier that will transport your kayak for you is a kayak trailer. You will attach it to your vehicle (car, truck, SUV - whatever you have that will take the weight) or pull it yourself. (As you become the vehicle carrying it, but you do it more easily than drag it yourself.) You can also attach one to your bike and allow it to pull for you. Often even kayakers destined for your bike can double as hand trailers. Kayak trailers will transport your kayaks over great distances (on a truck or maybe a bike trailer) or simply help you take kayaking into the water (such as a hand trailer that will allow you to transport your kayak over shorter distances.) What is the difference between a hand/bike trailer and a kayak truck trailer? A hand trailer is one you're going to push or pull. It aims to get your kayak into the water with ease. For example, a more popular place to fit into the river will often have substantial traffic and supporting your truck in the loading zone probably won't be possible. (Especially if the river has a bit of a drop off, like most of them.) You'll probably park some trekking from the water and get your kayak there will be all the easiest to have portable transportation that will allow you to roll your kayak into the water. A bike trailer is often one that will work as a hand trailer, but also attached to your bike so you can travel longer distances. If you plan to cycle to your destination to start your kayaking trek, then you'll want to look in a bike trailer that will also allow you to manage it as a hand trailer as well. The truck trailer will work very similar to any other trailer for your vehicle; it will just carry your kayaks instead of anything you usually move. It will attach to the snag of your vehicle and will likely have connections to attach to the brake lights to operate its own separate brake lights. How heavy is a kayak? How much your kayak weighs depends entirely on the type of kayak you get. You can get a kayak that weighs 20 pounds or some weighing 80 pounds, all sizes in between, and some outliers on both extremes. You can get an inflatable kayak that will weigh less than 10 pounds, and you can get a heavy one that weighs 100 - it's up to you. There are three main materials from which made kayaks are polyethylene, fiberglass or composite. Poly is a type of plastic and is the least expensive (but heaviest). Fiberglass is an average range for both weight and price and the composite is more expensive and lighter. Get what you pay for; and a kayak is no different. We want to note that if you are carrying two kayaks of very different weights, you may need to adapt for proper balance. Can you tie a kayak to a car? You can tie pretty much anything to a car given the right gear and fairly complete straps. The most efficient way would be to buy specialized kayak carriers intended to tie your kayak to your car. But you can fasten your kayak (or two, but probably no more than two safely) with only the rack and sleepers. Without the sleepers, you will surely lose safety and driving at normal speeds with kayaks on board will become a safety issue. Other kayak trailers we reviewed We looked at another 20 kayak trailers. Although they didn't make our list of 5 best kayak trailers, they are the best of the rest and each is still a great option for you. The information you will have to compare each is included in the list and we have entered it in the following categories: Truck Kayak TrailersHand Trailers for KayaksTruck Kayak TrailersC.E.
