Install rubbermaid wire shelving

Rubbermaid wire shelves are produced in a number of styles, allowing for custom installation in almost any space. Common uses include home cupboards, kitchen pantries, pantries, office storage and retail. The steps to complete the appropriate installation will be different from the specific product or package purchased, but all products follow common guidelines. In general, simple tools such as a hammer, electric drill, tape measure, pencil and level are all that are needed for the installation of rubbermaid wire shelves. The wire shelves in the cabinet, such as the attractive white wire shelves used for this project, can be designed to meet almost any need in a fraction of the cost of a custom built-in system. And while learning how to install a wire shelf cabinet is not quite a no-brainer, you don't have to be a master carpenter or own a fully equipped cabinet shop to get it done. We have selected the brains of professional installer Tim Bischke for these tips to help you with your next installation. Over the past 15 years, Tim has hung wire shelves in thousands of closets. His jobs ranged from simple one-shelf cabinets to elaborate wardrobes. When you hang so many shelves, you can't help but know what you're doing. The HandymanEven family if you're just planning to build one wardrobe shelf, keep extra pieces handy. It takes a lot less time to return a few wall clips than to stop working to make a special trip to the store for just one. And plans change, so if you or your customer decide to add a piece of the shelves, you'll be ready. The HandymanTim family primarily works with standard Closet Maid wire shelves, which are sold in home centers. (Rubbermaid shelves are comparable.) Most manufacturers make a heavier product for storing garages, but Tim thinks ordinary things are quite strong for the average bedroom or closet in the hallway. However, if your customer's wardrobe is going to store a collection of bowling balls, you might want to consider upgrading. The cabinet materials shown here (about 22 ft. shelf and bars) cost about \$150. Complete DIY projects as a professional! Sign up for our newsletter! Do it right, do it yourself! The HandymanTim family uses a stick with bubbles, not a level when installing cabinet shelves. The bubble stick is like a ruler and a level rolled into one. Holding against the wall with one hand can be frustrating. Levels are rigid and do not work in place when on a stallion that bowed a little. Bubble stick has a little flex, so it can drive imperfections of the wall, but still deliver a straight line. The handyman family's first template was just 1x3 with a few holes drilled. He resurered the torpedo level at the top of the board and marked the locations of the end carrier with a pencil. The template he uses here has a built-in level and allows him to drill holes without marking them first. For \$190, this is for guys who make a lot of closets on shelves. But if it's you, it's a great investment. You can order one of your local closet maid dealers. The family's HandymanBack wall clips are designed to support the shelf, but if there's a pile of clothes hanging on the front of the shelf with nothing on top that would burden them, the back of the shelf can be lifted. To keep the shelf in place, Tim installs a wedge-holding buckle near the middle of the shelf. One clip to the middle of the 8-ft. Shelves is enough. The HandymanCut family your screw cutter shelves. It's quick and easy, and it makes a clean cut. To make room for the cutter, Tim uses his legs to keep the shelves off the ground. The HandymanTim family considers aesthetics when installing their corner supports. If the shelf only needs one bracket, it will find the stallion closest to the center. If two or three brackets are needed, they will try to evenly space them, making sure that at least one bracket to the center hits the stallion. The Handyman family When cutting shelves, measuring from wall to wall, and subtracting inches. This allows for the thickness of the end bracket plus a little wiggle room. It is the upper, thinner wire that actually supports the shelf, and one wire per end is enough. Cutting the exact length will only earn you a wall of scratches and travel back to cutting cells. The Handyman family When Tim installs wire shelves in the knoils, he likes the top of the shelf caps with a white 1/4-inch. This stops thinner items from rolling over. He uses white zip ties to keep the pegboard in place. 4 x 8-ft. the sheet costs less than \$20 in most home centers, making it a cheap option. The Handyman familyIt can go against any instinct, but hitting stallion when installing clips of the back wall slows down the process and is not necessary. After marking their locations, Tim drills 1/4-inch. He likes his push tool. There's a bit of a magning in the top that won't slip off the needle when placed in drywall. Occasional wall clips landing on wedges should be fastened with a screw instead of a pin. You can order push tools from your local closet maid dealer. It should cost less than \$25.
