## Intelli vent error codes

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 Content Table 47 1 2 3 4 5 56 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 3 1 1 32 33 34 35 36 37 38 39 41 41 43 44 45 46 - 15 LED STATUT PROBLEM SOLUTION The self-diagnosis test detected the presence of flammable vapours. The Intelli-Vent control is programmed to lock and minimize this error code if the theresistance value it detects from the FV sensor is greater than 70,000 ohms, but remains below 1,700,000 ohms. The Intelli-Vent control is in a state of a hard lockout that cannot be reset by the power cycle to the water heater. See the constructions below for the reset procedure. 1 Turn off the water heater power supply. Carefully check the surrounding area for all substances such as gasoline, paint, paint thinners, or cleaners that could set up flammable fumes. Remove anything that may emit flammable fumes from the area and place it properly in a different location. 2 Make sure the water heater's power is turned off. Remove the FV sensor from its support on the base of the water heater and disconnect the two wires from the sensor. Take a resistance reading between the two FV sensor wiring terminals and write down the resistance values. Do this test once in the area by the water heater and a second time outside after allowing the sensor to acclimatize to the outside atmosphere for 5 minutes. Memo: These resistance readings should be taken using an ohm scale above 70,000 ohms. 3 If the FV sensor resistance is greater than 70,000 ohms during indoor testing alone and resistance taken in the outdoor atmosphere dropped below 70,000 ohms. Re-check the area surrounding the water heater for substances that could emit flammable fumes. Remove all these benefits from the area and store them properly in a different location. Repeat Step 2. 4 If the FV sensor is more than 70,000 ohms in indoor and outdoor testing - replace the flammable steam sensor. 5 If the FV sensor's strength was less than 70,000 ohms in indoor and outdoor testing and all the steps above have been taken - replace the Intelli-Vent control™. Flammable Vapour Reset Procedure (FVS) After a lockout of flammable steam has been initiated, a manual reset must be performed to restore the operation. The following must be done by a qualified service person after the danger has been removed: 1 manual reset is accomplished by the first, turn off the power at for 10 seconds. 2 Restore power to the water heater. 3 Within 10 seconds of power restoration, press the two temperature adjustment buttons simultaneously until the left (green) Vacation LED begins to flash (about 5 seconds delay). Once the holiday LED starts to flash, release both buttons. 4 Again, within 10 seconds, press both temperature adjustment buttons simultaneously the LED devacation is on stable (about 5 seconds late). 5 Release both buttons, the microcomputer will clear the FVS lockout and the normal operation will then be restored. - edit This reset procedure didn't work for me, but I found another one that did. Follow steps 1-3 above, then for step 4 press the left (cooler) and right (warmer) buttons in this order: Left left right.
