Whirlpool gold series oven manual cleaning

The Self-cleaning cycle uses very high temperatures, burning soil to a powdery axle. Refer to your owner's tutorial for specific instructions on setting up the Self-Clean function. IMPORTANT: The health of some birds is extremely sensitive to the fumes given off during the Self-cleaning cycle. Exposure to the fumes can lead to the death of certain birds. Always move birds to another closed and well-ventilated room. Tips for high temperature self-cleaning ovens: Self-clean the oven before contesting heavily. Heavy soil leads to longer cleaning and more smoke. Keep the kitchen well ventilated during the Self-cleaning cycle to help get rid of heat, odors, and smoke. Do not block the oven vent(s) during the Self-cleaning cycle. Air should be able to move freely. Do not clean, rub, damage or move the oven door gasket. The door gasket is essential for a good seal. Prepare the oven: Remove the oven wires, broiler pan, grill, cookware and bakingware from the oven. Remove any foil from the oven. Hand-clean inside the door edge and the 1 1/2 in. (3.8 cm) area around the inside of the oven cavity frame, careful not to move or bend the gasket. This area does not get hot enough during self-cleaning to remove soil. Do not allow water, cleaner or any other liquid to enter slots on the door frame. Use a damp cloth to clean this area. Wipe out any loose soil to reduce smoking and avoid damage. Remove any plastic items from cooking, to prevent melting. Removes all items from the storage drawer. Before self-cleaning, make sure the door is completely closed or it will not close and the cycle will not begin. Run the Cleaning Cycle Press the Clean button Select desired clean setting or cycle time. Press the Start button. When the cycle ends late series cool and wipes excess ash from clean cycle. The oven door will close about 6 seconds after the cycle is started. Heat, On, Closed, and Clean will appear on the display. The door will not unlock until the oven cools. The cycle time includes a 30-minute cool-down time. When the cycle is complete and the oven cools, End will appear on the screen and Closed will disappear. The heating and cooling of porcelain on steel in the oven can lead to discoloration, loss of glare, hairline cracks and popping sounds. This is normal and will not affect the performance of the device. Please see the oven cleaning section in your Owner's Manual for specific instructions on how to clean your oven. If you want to download or view product literature for your device, please visit our Manual and Literature page. Soil left on glass before self-cleaning can leave dark stripes or stains. Most of these stains can be removed by using a glass cleaner and scrub with a very fine (000) steel wool pad. Cleaning the window glass before self-cleaning the oven will reduce unsightly burnt Was this article helpful? 1 Table of Contents 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 The Self-cleaning cycle uses very high temperatures, burning soil to a powdery axle. The feature heats up the oven, so it's much hotter than the baking or broiler temperatures, effectively burning those tough food spots in powder ash. The self-cleaning options take two hours for lightly ground ovens, or up to four hours for heavy ground ovens. Some Whirlpool ovens also have a steam cleaning option that uses hot water to soften stuck-on food so you can erase it. The Steam option only takes about 20 minutes to complete. Self-cleaning option Remove everything from inside the oven and oven drawer, including any stored pans and the oven racks. While oven racks can be left in the second and fourth positions from above during self-cleaning, they are the best hand washed because the high heat discolors the shelves and makes them harder to slide. Wash them in the sink with light dishwashing detergent and a sponge or a steel wool soap path while the oven completes the self-cleaning cycle. Open the frame around the oven door and oven front - the front part of the oven that touches the door when closed - with light dish detergent and a sponge or a soapy steel wool pad. Do not clean or otherwise disturb the gasket around the oven front, because it can damage the seal and later affect baking ability. Remove everything from the top of the range, especially anything that blocks the oven vent or is made from plastic. Open a window to risk the room, or turn on the exhaust fan above the stove. Press the Auto Clean button on the oven's control panel; the button might say Precise Clean on some Whirlpool models. For dual oven Whirlpool models, press 1 to clean the top oven or 2 to clean the bottom oven. The self-cleaning feature can only clean one oven at a time, with a mandatory 12-hour waiting time before you can clean the other oven. Press the up or down arrows on control panel to adjust the cleaning time. After the oven selection is made, the display panel precedes up to an automatic self-cleaning duration of usually 3 1/2 hours for medium-ground ovens. The shortest cleaning duration, for light cleaning, ranges from 2 to 2 1/2 hours depending on the Whirlpool model, with an upper range for heavy ground ovens of 4 to 4 1/2 hours. Press the Start button to start the self-cleaning cycle. The door will automatically close and should not be opened until the cooling period ends - Closed lighting the display pane. The oven cools off the last 30 minutes of cleaning cycle and unlock at the end of the cycle. Wipe out the oven with a damp sponge to remove any axle resins left from the cleaning process. If any get-on debris remains, scrub it with a barn steel wool soap pad. A light barn cleanser or a little oven cleansers can help lift stubborn debris. Replace the oven trays and continue with normal use. Steam cleaning option Remove the oven wires and clean them separately by hand. Clean the door frame and oven in front by hand with a sock punch or steel wool path. Sweep up any loose debris in the oven with a sponge. Press the Steam Clean button on control panel. Press 1 or 2 to select the top or bottom oven in double oven models. Pour four ounces of distilled water into the bottom of the oven and close the door. Distilled water works best because it will not leave mineral deposits on the oven surface. Press Start to start the Steam Cleaning Cycle. Wait for the beep to signal the end of the cycle, usually after about 20 minutes. Press Cancel to clear the display. Wipe any remaining water from inside the oven with a sponge or cleaning cloth. Whirlpool recommends a non-scratching copper scrub pad to clean stubborn, stuck-on spots. How often to clean the oven the oven three times a year if you rarely use it, or about once a monthly if you use the oven daily. If you prefer not to use the self-cleaning function every time, spray the inside with oven cleaners; let it sit for two hours and scrub clean with a wet cloth. Place a baking sheet on a lower rack to catch any food pigeons from the baking dish above when cooking. This reduces the build-up of food debris to help keep the oven clean. Clean.
